RESPONDENTS FOR THE COMMUNITY SURVEY

SUPERVISOR: This questionnaire is to be administered in the presence of a group of respondents from the selected village (in cases where the HES sample is spread over more than one village, pick the village in which the majority of the selected households live). To the extent possible, try to ensure that there are as many representatives present as possible from the households selected for the household interviews. Responses to the questionnaire are to be obtained from the group as a whole. In case of disagreement, probe and discuss further until consensus is reached amongst the group. In case disagreement persists, confirm the response recorded at a later time with an independent group of individuals from the village.

To the extent possible, try to make sure that no single person ends up responding for the group as a whole, and avoid conducting the interview in the presence of a person in front of whom members of the group do not feel at liberty to speak freely.
