

INTRODUCTION

To establish an integrated statistical system to monitor the economic and Social performance of the population is the main task of a nation statistical Office. We all know CWIQ was developed as a joint effort of the World Bank and other Allied institution. It use a technique of optical reading that permit fast processing of the data and a timely release of the result.

The purpose of CWIQ was to collect information at different level on population that which was done on household level.

SURVEY OBJECTIVES

The objective of the survey is to provide data on the living condition of the Liberian people that which will enable Government, NGOs, International Institution, numerous national and the public in general for monitoring the work of the Liberian poverty reduction strategy in Liberia by what ever means.

FIELD REPORT

In every locality that I was assigned as a supervisor, I saw nothing but poverty. No good homes, roads, schools, hospitals, food, clinic, etc..... Our people are suffering yah.....

CHALLENGES

The major challenge that Liberians are faced with is unemployment rate. If that can be handle, we will be able to minimize poverty if not get rate of it completely. No man will have the financial means and allow his family to go hungry or allow his kids to go sell or go to the farm instead of going to school. Or let his family member to die without sending that person to hospital, even if the town or village he's in dose not have good health facilities, he will be in the position to transfer that person to a better hospital.

ACHIEVEMENT

I was given a task as supervisor and I improved the execution of my function. I understood the coordination of date collection, now I have provided statistical data on the living condition of the Liberian population for the use by the Government as well as numerous national and international institutions, NGOs the public in general. Now I know these data will be necessary for formulating and analyzing policies, plans and socio economic action programs for poverty reduction.

RECOMMENDATIONS

- EA lay out sketch map should be ready before workers get out on the field
- Questionnaires should be put in order well.
- Supervisor should be pay well.
- Contingency should increase.
- Household listen should go along with the EA.
