

(1)

Introduction

Team five (5) comprises of one supervisor, and four enumerators

. Names of the members are as follows.

- | | |
|------------------------|------------|
| 1. Hawa Sandamine-- | Supervisor |
| 2. Nathaniel D. Koikoi | Enumerator |
| 3. Christopher Nagbe | // |
| 4. Thomas J Mulbah | // |
| 5. Moses F. Roberts | // |

Working order

Team five started the Establishment Census on December 11, 2007 beginning from Jamaica Road to identify all areas assigned.

The census actually began on December 12, 2007 from cow factory until the whole assignment was completed on January 9, 2008, except the few call backs that remained until later it was completed.

The team went waterside UN Drive on January 10, 2008 to help Tamba Mayson the supervisor assigned central Monrovia and completed the area assigned.

The few call backs were completed on January 16 2008 and submitted to Mr. James Yangbie the coordinator.

Objective

The objective of this census is to provide information on all business Establishments including NGOS and GOVT. Establishments which helps stakeholders to make sound development planning.

Constraints

Some of the Establishments did not receive the information before the census began so they were uneasy to give information; we had to explain the purpose for which we are conducting this census before they could agree to provide information.

Conclusion

The census was very tedious considering the difficulties that we were faced with, because there was no vehicle to transport us and some of us live far distances, we sometimes had to walk to reach our assigned area.

Equally so it afforded us the opportunity to contribute to the National Establishment Census (.NEC)

Recommendations

That LISGIS should always assign vehicles to field workers so as to enable them carry on their work effectively.

That LISGIS should always inform the public through media before the project begins.

That LISGIS should select trained interviewers to do quality work.

We believe that when these recommendations are adhere to, some of the challenges that field workers encounters will be reduced.
