

EMPLOYMENT PATTERNS IN REAL ESTATE, RENTING AND BUSINESS ACTIVITIES (establishments with 20 or more workers)

(Eight of a series on employment)

This LABSTAT is the eight issue on a series of reports that focuses on patterns of employment in specific industry based on the results of the 2003/2004 BLES Integrated Survey (BITS). The BITS aims to provide integrated data sets on employment patterns, industrial relations practices and occupational injuries in non-agricultural establishments with 20 or more workers. The survey covered a sample size of around 6,000 establishments and was conducted last year in coordination with DOLE Regional Offices.

OVERVIEW

Total employment in real estate, renting and business activities as of the payroll period June 30, 2004 stood at 269,793 or 11.2 percent of the estimated 2.413 million workforce in non-agricultural establishments with 20 or more workers over the same period. (*Table 1*)

Employment in this sector was largely dominated by establishments engaged in miscellaneous business activities (83.0% or 223,954) such as legal, bookkeeping, accounting, auditing, advertising, market research, management consultancy and other related activities.

The remaining (17.0% or 45,840) were distributed sparsely among establishments engaged in real estate activities (8.6%); renting of machinery and equipment without

operator; personal and household goods (0.9%); computer and related activities (6.6%); and research and development (0.9%). (*Table 2*)

Type of Workers

The bulk (88.9% or 239,910) of the employed belonged to the rank and file workers of which regular workers comprised 54.3 percent (146,407) of total employment.

A little more than 10.0 percent were in the category of managers/executives (4.5% or 12,138) and supervisors/foremen (6.1% or 16,392). Working owners/unpaid workers accounted for a mere 0.5 percent or 1,354 workers.

This pattern of employment was observed in the five (5) sub-sectors that comprised the industry.

Nature of Employment

Roughly two-thirds (64.8% or 174,937) of the workers in this sector were regular workers. This group of workers enjoyed security of tenure and received non-wage and social security benefits, among others.

Non-regular workers comprised only a little over one-third (34.7% or 93,503) of total employment. This proportion varies across sub-sectors with the highest noted in computer and related activities (38.7%) and miscellaneous business activities (36.8%). In contrast, these proportions were comparatively lower in real estate activities (12.9%), research and development (22.7%) and renting of machinery and equipment without operator; personal and household goods (22.8%).

Contractual/ project-based workers comprised the biggest proportion of non-regular workforce as they accounted for more than one-fourth (26.5%) of total employment. The bulk (89.5% or 64,078) of them was employed in miscellaneous business activities sector. Casual (3.8% or 10,177) and probationary (3.9% or 10,400) workers made up for the other important categories of workers in this industry.

Basis of Payment

In proportion to total employment, monthly paid and daily paid time-rate employees accounted for almost the same share at 48.1 percent and 46.3 percent, respectively. Together, they made up for nearly 95.0 percent of the total employment. The presence of part-time workers and output-rate workers were almost negligible.
