## Zambia (2002-2003) Living Conditions Monitoring Survey 2003/3 - Zambia (LCMS 2002-2003)

Overview	
<b>Type</b>	Multiple Indicator Cluster Survey - Round 1 [hh/mics-1]
<b>Identification</b>	ZMB-CSO-LCMS-2002/3-v01
<b>Version</b>	<p>Production Date: 2004-11 v 1.3: Edited, anonymous dataset for public distribution</p> <p><u>Notes</u> Version 1.3 is the edited , anonymous dataset which is meant for public distribution and is equivalent to version 1.2 except that version 1.2 was meant for internal use only. Version 1.3 is different from version 1.1 in that this version was not edited i.e. it was raw data obtained after data entry</p>
<b>Series</b>	<p>The Living conditions Monitoring Surveys (LCMS) evolved from the social dimensions of adjustment priority surveys conducted in 1991 (PSI) and 1993 (PSII), by the Central Statistical Office. Since 1991, the country has been utilizing cross-sectional sample data to monitor the well-being of the Zambian population, as was the case with the 1996 and 1998 LCMS surveys. Ho The aim of the Living Conditions Monitoring Survey III (LCMS III) was to highlight and monitor the living conditions of the Zambian society, monitor the impact of government policies, programmes and donor support on the well being of the Zambian population, monitor poverty and its distribution in zambia, provide various users with a set of reliable indicators against which to monitor development, provide relevant data required for computing province pecific poverty lines and identify vulnerable groups in society and enhance targeting in policy implementation</p>

### **Abstract**

The aim of the 2002/3 Living Conditions Monitoring Survey was to highlight and monitor the living condition of thr zambian society. it was also designed to provide expenditure data required for computing region specific CPI indices . Further, the survey was also designed to provide expendiure data required for estimating househlo final consumption, a key component of cross domestic product (GDP). the aim was also to identify vulnerable groups in society and enhance targeting in policy implementation and also to develop new national and province and provide various users with a set of reliable indicators against which to monitor development.

To achieve the above stated tasks, the LCMSIII main questionnaire was made of two distinct parts. part I of the main questionnaire covered the following topics:

Demography amd migration  
Orphanhood  
Health  
Education  
Current Economic activities and labour force  
Child Health Care and Nutrition  
Household Amenities and Housing conditions  
Household access to facilities  
Households assets  
Self-assesed poverty and household coping strategies, and  
Household food production

Part II of the questionnaire covered the following topics:

Household expenditure  
Household income  
Household non-farm enterprises and

Deaths in the Household	
<b>Kind of Data</b>	Sample survey data [ssd]
<b>Unit of Analysis</b>	1. Household (household survey) 2. Individual (household survey)

## Scope & Coverage

### Scope

The scope of the LCMSIII survey included a set of core living conditions indications to be monitored over a period of twelve months and the household budget component to be implemented over a period of twelve months and this included the following topics:

Demography and migration

Orphanhood

Health

Education

Current Economic activities and labour force

Child Health Care and Nutrition

Household Amenities and Housing conditions

Household access to facilities

Households assets

Self-assessed poverty and household coping strategies, and

Household food production

Part II of the questionnaire covered the following topics:

Household expenditure

Household income

Household non-farm enterprises and

Deaths in the Household

<b>Keywords</b>	economic conditions and indicators [1.2], income, property and investment/saving [1.5], agricultural, forestry and rural industry [2.1], employment [3.1], unemployment [3.5], working conditions [3.6], basic skills education [6.1], accidents and injuries [8.1], childbearing, family planning and abortion [8.2], general health [8.4], health care and medical treatment [8.5], nutrition [8.7], specific diseases and medical conditions [8.9], housing [10.1], land use and planning [10.2], children [12.1], social and occupational mobility [12.8], social conditions and indicators [13.8], fertility [14.2], migration [14.3], morbidity and mortality [14.4], information technology [16.2]
<b>Topics</b>	economic conditions and indicators [1.2], income, property and investment/saving [1.5], agricultural, forestry and rural industry [2.1], employment [3.1], unemployment [3.5], working conditions [3.6], basic skills education [6.1], accidents and injuries [8.1], childbearing, family planning and abortion [8.2], general health [8.4], health care and medical treatment [8.5], nutrition [8.7], specific diseases and medical conditions [8.9], housing [10.1], land use and planning [10.2], children [12.1], social and occupational mobility [12.8], social conditions and indicators [13.8], fertility [14.2], migration [14.3], morbidity and mortality [14.4], information technology [16.2]

### Geographic Coverage

The Living Conditions Monitoring Survey III (LCMSIII) was designed to cover 520 standard enumeration areas (SEAs) or approximately 10,000 non-institutionalised private households residing in both the rural and urban areas of all the nine provinces in Zambia. The survey was carried out for a period of 12 months using a rolling sample. For the purposes of this survey, a survey reference month had 36 days instead of 30 or 31 days, as is the case with calendar months. This implies that the 360 days in a year were divided into 10 cycles of 36 Days each. As a result, 52 SEAs, which is one-tenth of the 520 SEAs were covered every cycle countrywide.

**Universe**

The survey covered all de jure household members (usual residents), that is all women and men resident in the household and all children under the age of five.

**Sampling****Sampling Procedure**

The sampling frame used for the LCMSIII survey was developed from the 2000 census population and housing. The frame is administratively demarcated into 9 provinces, which are further divided into 72 districts. The districts are further subdivided into 150 constituencies which are also divided into wards. Wards consist of Census Supervisory Areas (CSA), which in turn embrace Standard Enumeration areas (SEAs). For the purpose of this survey, SEAs constituted the ultimate Primary Sampling Units (PSUs)

In order to have equal precision in the estimates in all the provinces and at the same time take into account variation in the sizes of the provinces, the survey adopted the square root sample allocation method, (Lesli Kish 1987). This approach offers a better compromise between equal and proportional allocation methods in terms of reliability of both combined and separate estimates. The allocation of the sample points (PSUs) to rural and urban strata was almost proportional. The allocated provincial samples were multiples of 10 so as to facilitate the rolling of equal samples during the 10 cycles of data collection

The LCMSIII survey employed a two-stage stratified cluster sample design whereby during the first stage, 520 SEAs were selected with Probability Proportional to Estimated Size (PPES). The size measure was taken from the frame developed from the 2000 census of population and housing. During the second stage, households were systematically selected from an enumeration area listing. The survey was designed to provide reliable estimates at provincial, residential and national levels.

**SELECTION OF STANDARD ENUMERATION AREAS (SEAs)**

The SEAs in each stratum were selected as follows

(i) Calculating the sampling interval (I) of the stratum.

formula refer to chapter 2 of the report

a= is the number of SEAs allocated to the stratum

(ii) calculate the cumulated size of the cluster (SEA)

(iii) Calculate the sampling numbers  $R, R+I, R+2I, \dots, R+(A-1)I$ , where R is the random start number between 1 and I

(iv) Comparing each sampling number with the cumulated sizes.

The first SEA with a cumulated size that was greater or equal to the random number was selected. The subsequent selection of SEAs was achieved by comparing the sampling numbers to the cumulated sizes of SEAs

**SELECTION OF HOUSEHOLDS**

The LCMSIII survey commenced by listing all the households in the selected SEAs. In the case of rural SEAs, households were stratified and listed according to their agricultural activity status. Therefore, there were four explicit strata created in each rural SEA namely, the small Scale Stratum (SSS), the Medium Scale Stratum (MSS), the Large Scale Stratum (LSS) and Non-agricultural Stratum (NAS). For the purposes of the LCMSIII survey, about 7, 5 and 3 households were supposed to be selected from the SSS, MSS and NAS respectively. The large scale households were selected on a 100 percent basis. The urban SEAs were implicitly stratified into low cost, medium cost and high cost areas according to CSO's and local authority classification of residential areas. About 15 and 25 households were sampled from rural and urban SEAs, respectively. However, the number of rural households selected in some cases exceeded the desired sample size of 15 households depending on the availability of large scale farming households. The selection of households from various strata was presided by assigning fully responding households sampling serial numbers. The circular systematic sampling method was used to select households. The method assumes that households are arranged in a circle (G.Kalton, 1983) and the following relationship applies

Let  $N=nk$ ,

Where :

$N$ = Total number of households assigned sampling serial numbers in a stratum

$n$ = Total desired sample size to be drawn from a stratum in an SEA

$k$ = The sampling interval in a given SEA calculated as  $k=N/n$ .

#### **Deviations from Sample Design**

There was some deviation in the sample design due non accessibility of certain areas as most of the places were flooded.

#### **Response Rate**

100 percent response rate

#### **Weighting**

Due to the disproportionate allocation of the sample points to various strata, sampling weights are required to correct for differential representation of the sample at national and sub-national levels. The weights of the sample are in this case equal to the inverse of the product of the two selection probabilities employed above. therefore, the probability of selecting an SEA was calculated as follows

See Formulas on chapter 2 of the report page 8

### **Data Collection**

<b>Data Collection Dates</b>	start 2002-11-01 end 2003-10-31
------------------------------	------------------------------------

<b>Data Collection Mode</b>	Face-to-face [f2f]
-----------------------------	--------------------

#### **Data Collection Notes**

Data collection was done by way of personal interviews using two structured questionnaires. These questionnaires are Main Household Questionnaire and the Price questionnaire. The main household questionnaire was divided in to two parts namely:

- Main questionnaire part I- used for collecting information on the various aspects of the living conditions of the households
- Main Questionnaire part II- all the information collected using the household expenditure diary was later transcribed to this questionnaire in aggregate so as to make computer data capturing easy. This part of the questionnaire was also used to collect information on household income, non farm enterprise and deaths in the households.

The reference period for all the household consumption data was 31 days. The choice of 31 days as reference period is in order since the longest month in a normal calendar year has 31 days. The diary method was employed

to collect household consumption expenditure data. each diary was designed to accommodate diary entries for a period of 5 days after which another diary was dropped with the household during the next visit. However, households were requested to make diary entries pertaining to 6 days during the sixth visit so that we have 31 days of total diary entries for all the households.

In order to effectively spread the interviews workload of checking and filling in diaries and also enhance the quality of diary entries, households were grouped in 5 batches of 3 and 5 in rural and urban areas, respectively. Each household with a literate person was visited 7 times by the interviewer. However, households that could not fill in the diaries by themselves were assisted by the interviewer on a daily basis; hence the need to batch up households in manageable groups.

### **Questionnaires**

Listing book - the listing book was used to list all the households in the SEA. The listing book had several questions that were asked to assist in stratifying households in the rural areas into small scale, medium scale, non agricultural and large scale.

Main household questionnaire - this questionnaire was administered to selected households in the SEA. and collected information on household members including sex, age, relationship and orphanhood status.

<b>Data Collector(s)</b>	Central Statistical Office (CSO) , Ministry Of Finance and National Planning
--------------------------	--

### **Supervision**

Supervision was done by a sub professional from among the Central Statistical Office. A supervisor was responsible for day to day work plan of the enumerators assigned to him/her.

- (i) The supervisor was responsible for finding selected household and also location boundaries.
- (ii) Preparation of the questionnaires and field visits
- (iii) Observing Interviews
- (iv) Verification of interviews
- (v) Submitting the completed questionnaires to the survey coordinator
- (vi) Collecting price information

### **Confidentiality**

Confidentiality of respondents is guaranteed under the provisions of the Census and Statistics Act, CAP 127 of the laws of Zambia.

### **Access Conditions**

The Director of the Central Statistical Office has to authorise access to information. Before being granted access to the dataset or any other information produced by CSO, all users have to formally agree to the following:

1. To make no copies of any files or portions of files to which s/he is granted access except those authorized by the Central statistical Office.
2. Not to use any technique in an attempt to learn the identity of any person, establishment or sampling unit not identified on public use data files
3. To hold in the strictest confidence the identification of any establishment or individual that may be inadvertently revealed in any documents or discussion or analysis. Such inadvertent identification revealed in the user's analysis will be immediately brought to the attention of the Central Statistical office.
4. The data will be used for statistical and scientific research purposes only.
5. The data and other materials will not be redistributed or sold to other individuals, institutions, or organisation without the written agreement of the CSO.

### Description

This is the main instrument that was used to collect data in all the sampled areas for all the households

### Abstract

The main questionnaire is the instrument that was used to collect information in all the sampled enumeration areas during the survey. It had a number of questions that were broken into parts which included demography and migration, orphaned, health, education, current economic activity, anthropometry, household amenities and housing conditions and also collected information on household expenditure, household income and death in the house.

## Technical documents

**Living Conditions Monitoring Survey III (LCMS III) Supervisor's Instruction Manual**, Central Statistical Office, October 2002, Zambia [zmb], English [eng], "documentation\LCMS III - 2003- Supervisor's Manual.pdf"

### Description

This is the instrument that provided guidelines for supervisors during the survey.

### Abstract

The Supervisor's instruction manual gave an introduction on the background and the purpose of the survey. It also provided guidelines on the sampling procedure that was to be used in the field when sampling households. It also contained information on the field staffs roles. It also gave the supervisors instruction on how to supervise the enumerators and also other duties that the supervisor is supposed to perform

**Living Conditions Monitoring Survey III (LCMS III) Enumerator's Instruction Manual**, Central Statistical Office, October 2002, Zambia [zmb], English [eng], "documentation\LCMS III 2002 ENUMERATORS' MANUAL.pdf"

### Description

This is a document that had instructions for enumerators to guide them during the survey

### Abstract

It is a document that provided the roles and duties of the enumerators while in the field. It gave instructions on what the enumerator was supposed to do while in the field, how to conduct interviews etc.
