Report No. 522 (62/10/1)

Employment and Unemployment Situation in India 2005-06

**NSS 62nd ROUND
(July 2005 – June 2006)**

National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India

January 2008

PREFACE

The National Sample Survey Organisation (NSSO) conducted an integrated survey of households and unorganised manufacturing enterprises in the 62nd round of NSS during July 2005 - June 2006. The subjects covered related to household consumer expenditure, employment and unemployment and certain characteristics of unorganised manufacturing enterprises. Surveys on employment and unemployment are being conducted quinquennially on a large sample of households from the 27th round (October 1972 – September 1973) onwards. Seven quinquennial surveys have so far been conducted. Apart from these quinquennial surveys, the NSSO collected information on some items on employment and unemployment, as a part of the annual series, from a smaller sample of households in each round of survey since 45th round (July 1989 – June 1990) till 59th round (January – December 2003). The data in these rounds were collected through the household consumer expenditure schedule. In the 60th round (January- June 2004), a separate schedule was designed for collection of data on employment and unemployment and the data was collected from an independent set of sample households. In 62nd round also, a separate schedule, on the lines of the schedule canvassed in the 60th round, was canvassed, in an independent set of sample households.

The present report is based on the data collected through the 62nd round of NSS. It gives quantitative information on various characteristics pertaining to employment and unemployment and some characteristics associated with them at the national and state levels. This report also presents some quantitative information on current attendance in educational institutions for persons in the age group 5-29 years and on vocational training received by persons in the age group 15-29 years. Chapter One is introductory. Chapter Two gives the concepts and definitions. Chapter Three gives summary of the findings. Detailed tables based on the survey are given in Appendix A. The sample design and estimation procedure are given in Appendix B. Facsimile of schedule, canvassed during the survey is given in Appendix C.

Survey Design and Research Division of NSSO developed the sample design and survey instruments and also prepared the report. The Field Operations Division of NSSO carried out the fieldwork and the Data Processing Division of NSSO handled the data processing and tabulation work. The Coordination and Publication Division of NSSO coordinated various activities pertaining to the survey.

I am grateful to the Chairman and Members of the then Governing Council of NSSO and also the Chairman and Members of the present Steering Committee of NSS and also to the Working Group for the NSS 62nd round for their technical guidance at various stages of survey work. I am grateful to all Officers and Staff Members of this Ministry who were associated with the survey for their contribution. Special thanks are also due to the respondent households who provided the requisite information during the data collection in the survey.

I hope, this report will be useful to planners, policy makers and researchers. Comments and suggestions for improvement will be most welcome.

New Delhi
January 2008

S. K. Sinha
Director General & Chief Executive Officer
NSSO

मुख्य परिणाम

यह रिपोर्ट जुलाई 2005 से जून 2006 के दौरान रोजगार और बेरोजगारी पर किये गये 62वें दौर के सर्वेक्षण पर आधारित है। यह सर्वेक्षण 4,798 ग्रामों और 5,125 नगरीय खंडों में किया गया, जिसमें कुल 78,879 परिवारों (37,975 ग्रामीण क्षेत्रों में और 40,904 नगरीय क्षेत्रों में), जिनमें 3,77,377 व्यक्ति (1,86,571 ग्रामीण क्षेत्रों में और 1,90,806 नगरीय क्षेत्रों में) शामिल थे, की गणना की गई। रोजगारी और बेरोजगारी दरों की माप तीन भिन्न अभिगमों (approaches) द्वारा की गई एक वर्ष की संदर्भ अवधि वाला प्रायिक स्तर, एक सप्ताह की संदर्भ अवधि वाला चालू साप्ताहिक स्तर और संदर्भ सप्ताह के प्रत्येक दिन में किये गये दैनिक कार्यकलाप पर आधारित चालू दैनिक स्तर। जब तक कि अलग से उल्लेख न किया गया हो, 'सभी' प्रायिक स्तर कामगारों का तात्पर्य प्रायिक प्रमुख स्तर और गौण स्तर दोनों पर विचार करते हुए सभी कामगारों से होगा। माप की इकाइयां, जो परवर्ती मुख्य परिणामों में दरों को अंतर्निहित करती हैं, प्रायिक स्तर में व्यक्ति, साप्ताहिक स्तर में व्यक्ति-सप्ताह और दैनिक-स्तर में व्यक्ति-दिन हैं। कुछ मुख्य परिणाम नीचे दर्शाये गये हैं।

क - परिवार और जनसंख्या अभिलक्षण

- परिवारों का लगभग 74 प्रतिशत ग्रामीण भारत में रहने वाला था और यह कुल जनसंख्या का लगभग 76 प्रतिशत पाया गया।
- ग्रामीण क्षेत्रों में, लगभग 79 प्रतिशत परिवारों के पास किसी न किसी प्रकार का 'रेशन कार्ड' था। नगरीय क्षेत्रों में यह प्रतिशत 68 तक निम्न था।
- 15-59 वर्ष के आयु वर्ग, जिसे मूल-आयु या आर्थिक रूप से सक्रिय जनसंख्या कहा जाता है, में (पुरुष+महिला) जनसंख्या ग्रामीण क्षेत्रों में कुल जनसंख्या का लगभग 58 प्रतिशत और नगरीय क्षेत्रों में लगभग 65 प्रतिशत था।
- सभी आयु की जनसंख्या के लिए साक्षरता दर ग्रामीण क्षेत्रों में पुरुषों के लिए लगभग 66 प्रतिशत और महिलाओं के लिए 47 प्रतिशत थी। अनुरूपी नगरीय अनुपात क्रमशः 82 और 70 थे।
- 7 वर्ष और अधिक आयु के व्यक्तियों के लिए, ग्रामीण क्षेत्रों में साक्षरता दर पुरुषों के लिए 74 प्रतिशत और महिलाओं के लिए 52 प्रतिशत थी और नगरीय क्षेत्रों में यह पुरुषों के लिए 89 प्रतिशत और महिलाओं के लिए 77 प्रतिशत थी।
- 15 वर्ष और अधिक के आयु-वर्ग में ग्रामीण जनसंख्या का लगभग 16 प्रतिशत और नगरीय जनसंख्या का 42 प्रतिशत 'माध्यमिक' और ऊपर के शिक्षा स्तर वाले बताये गये और उन्हें इस रिपोर्ट में शिक्षित व्यक्ति कहा गया है।
- आयु-वर्ग 5-29 वर्ष में लगभग 50 प्रतिशत व्यक्ति चालू समय में शैक्षिक संस्थाओं में उपस्थित होते पाये गये - 49 प्रतिशत ग्रामीण क्षेत्रों में और 53 प्रतिशत नगरीय क्षेत्रों में।
- आयु-वर्ग 5-29 वर्ष के व्यक्तियों के लिए चालू उपस्थिति में लिंगानुसार अंतर ग्रामीण क्षेत्रों की तुलना में नगरीय क्षेत्रों में कम था - ग्रामीण क्षेत्रों में 53 प्रतिशत पुरुष और 45 प्रतिशत महिलाओं की तुलना में नगरीय क्षेत्रों में 55 प्रतिशत पुरुष और 51 प्रतिशत महिलायें शैक्षिक संस्थाओं में उपस्थित हो रहे थे।
- 5-29 वर्ष की आयु के व्यक्तियों में से नगरीय क्षेत्रों में लगभग 38 प्रतिशत और ग्रामीण क्षेत्रों में 32 प्रतिशत ने अपनी पढ़ाई या तो निष्क्रमित (dropped) या बंद कर दी थी।

- चालू समय में शैक्षिक संस्थाओं में उपस्थिति देने वाले 5-29 वर्ष की आयु वाले व्यक्तियों में से लगभग 63 प्रतिशत सरकारी शैक्षिक संस्थाओं में उपस्थिति दे रहे थे - सरकारी शैक्षिक संस्थाओं का हिस्सा ग्रामीण क्षेत्रों में लगभग 70 प्रतिशत और नगरीय क्षेत्रों में 40 प्रतिशत था। निजी बगैर-सहायताप्राप्त संस्था और निजी सहायताप्राप्त संस्थाओं में ऐसे व्यक्तियों का लगभग 56 प्रतिशत नगरीय क्षेत्रों में और 24 प्रतिशत ग्रामीण क्षेत्रों में था।
- 15 वर्ष और अधिक के आयु वर्ग के व्यक्तियों का केवल 1 प्रतिशत ग्रामीण क्षेत्रों में और 5 प्रतिशत नगरीय क्षेत्रों में कुछ औपचारिक तकनीकी शिक्षा प्राप्त अर्थात् तकनीकी शिक्षा में स्नातक या स्नातक स्तर से नीचे या ऊपर का डिप्लोमा/प्रमाणपत्र प्राप्त बताये गये।
- 15-29 वर्ष के आयु वर्ग में केवल 7 प्रतिशत ग्रामीण और 9 प्रतिशत नगरीय व्यक्तियों ने व्यावसायिक (औपचारिक और अनौपचारिक) प्रशिक्षण प्राप्त थे।

ख - श्रम बल और कार्य बल

- प्राथिक स्तर (ps +ss) के अनुसार, लगभग 56 प्रतिशत ग्रामीण पुरुष और 31 प्रतिशत ग्रामीण महिलायें श्रम बल में शामिल थीं। नगरीय क्षेत्रों के लिए अनुरूपी अनुपात क्रमशः 57 प्रतिशत और 15 प्रतिशत थे।
- देश में जनसंख्या का लगभग 41 प्रतिशत प्राथिक स्तर (ps +ss) के अंतर्गत नियोजित था। कामगार जनसंख्या अनुपात (WPR) ग्रामीण क्षेत्र में 43 प्रतिशत और नगरीय क्षेत्र में 35 प्रतिशत था।
- प्राथिक स्तर का.ज. अनुपात (WPR) में भिन्न लिंग विभेदक निम्नलिखित देखा गया : ग्रामीण क्षेत्रों में पुरुषों के लिए 55 प्रतिशत और महिलाओं के लिए 31 प्रतिशत तथा नगरीय क्षेत्रों में पुरुषों के लिए 54 प्रतिशत और महिलाओं के लिए 14 प्रतिशत।
- चालू दैनिक स्तर के अनुसार प्राप्त का.ज.अ. (WPRs) चालू साप्ताहिक स्तर से प्राप्त का.ज.अ. की तुलना में कम थे, जबकि यह प्राथिक स्तर दरों से प्राप्त की तुलना में चालू साप्ताहिक स्तर से प्राप्त में कम थे : चालू दैनिक स्तर के अनुसार का.ज.अ. (पुरुष जोड़ महिला साथ ही ग्रामीण जोड़ नगरीय) 34 प्रतिशत था और चालू साप्ताहिक स्तर के अनुसार यह 38 प्रतिशत था, जबकि प्राथिक स्तर अभिगम (approach) के अनुसार यह 41 प्रतिशत था।
- वर्ष 2004-05 और 2005-06 के बीच ग्रामीण क्षेत्रों में प्राथिक स्तर अभिगम में का.ज.अ. पुरुषों के लिए 55 प्रतिशत पर अपरिवर्तित रहा और महिलाओं के लिए इसमें लगभग 2 प्रतिशत बिन्दुओं, 33 प्रतिशत से 31 प्रतिशत, की कमी आयी। नगरीय क्षेत्रों में, पुरुषों के लिए का.ज.अ. लगभग 1 प्रतिशत बिंदु और महिलाओं के लिए लगभग 3 प्रतिशत बिंदु घटा था।
- ग्रामीण भारत में, आधे से ज्यादा सामान्यतः नियोजित ('सभी' कामगार) स्व-नियोजित थे - 57 प्रतिशत पुरुष एवं लगभग 62 प्रतिशत महिलायें। नगरीय भारत में तदनुरूपी आकड़े पुरुषों के लिए 42 तथा महिलाओं के लिए 44 थे।
- भारत के ग्रामीण और नगरीय दोनों क्षेत्रों में पुरुषों की तुलना में महिलाओं में नियमित मजदूरी/वेतनभोगी कर्मचारियों का प्रतिशत अपेक्षाकृत कम था : ये आकड़े ग्रामीण क्षेत्रों में पुरुषों के लिए 10 और महिलाओं के लिए 4 थे तथा नगरीय क्षेत्रों में पुरुषों के लिए 42 और महिलाओं के लिए 40 थे।
- ग्रामीण एवं नगरीय दोनों क्षेत्रों में, महिला आकस्मिक श्रमिकों का अनुपात पुरुष आकस्मिक श्रमिकों के मुकाबले लगभग 1 प्रतिशत बिन्दु उच्चतर पाया गया।

- ग्रामीण भारत में, सभी सामान्य तौर पर कार्यरत में, करीब 65 प्रतिशत पुरुष एवं 81 प्रतिशत महिलाएं 'प्राथमिक क्षेत्र' (खनन तथा उत्खनन को छोड़कर) में व्यस्त थे। तदनुरूप 1983 में आकड़े क्रमवार 78 एवं 88 थे।
- ग्रामीण भारत में 'द्वितीयक क्षेत्र (खनन तथा उत्खनन सहित)' में कार्यरत कामगारों के अनुपात में धीरे-धीरे बढ़ोत्तरी हुई है - 1983 में पुरुषों के लिए 10 प्रतिशत से 2005-06 में 17 प्रतिशत एवं महिलाओं के लिए 7 प्रतिशत से 12 प्रतिशत।
- यह अनुपात 'तृतीयक' (रा.औ.व.-2004 उद्योग प्रभाग : 50-99) क्षेत्र में भी बढ़ा है - पुरुषों में 12 प्रतिशत से 18 प्रतिशत एवं महिलाओं में 5 प्रतिशत से 7 प्रतिशत।
- नगरीय भारत में 'तृतीयक' क्षेत्र में करीब 59 प्रतिशत पुरुष कामगार कार्यरत थे, जबकि 'द्वितीयक' क्षेत्र में सामान्य तौर पर कार्यरत पुरुषों का 34 प्रतिशत कार्यरत था। महिलाओं के लिए, तदनुरूपी आंकड़े कुछ कम थे क्रमशः 52 एवं 33 प्रतिशत - प्राथमिक क्षेत्र में नियोजित नगरीय महिलाओं का अनुपात 1983 से लगभग 16 प्रतिशत बिन्दु नीचे आया जबकि अन्य क्षेत्रों में उल्लेखनीय वृद्धि पायी गई।
- करीब 13 प्रतिशत व्यक्ति - 16 प्रतिशत ग्रामीण एवं 3 प्रतिशत नगरीय क्षेत्रों में - गौण आर्थिक क्रियाकलाप में कार्यरत पाये गये। यह अनुपात पुरुषों (13 प्रतिशत) एवं महिलाओं (12 प्रतिशत) में लगभग समान था।
- ग्रामीण क्षेत्रों में, नियमित मजदूरी/वेतनभोगी कर्मचारियों के लिए औसत मजदूरी दर पुरुषों के लिए रु. 138.74 एवं महिलाओं के लिए रु. 87.71 था - केवल 50 रुपये के आसपास का फर्क था। नगरीय क्षेत्रों में मजदूरी दर उच्च थी। नगरीय क्षेत्रों में तदनुरूप मजदूरी दर पुरुषों के लिए रु. 205.81 एवं महिलाओं के लिए रु. 158.23 थी और इसलिए, एक नियमित महिला मजदूरी अर्जक को, औसतन, पुरुषों के मुकाबले, करीब 50 रुपये कम दिये गये।
- ग्रामीण क्षेत्रों में, औसतन एक दिन में एक पुरुष आकस्मिक श्रमिक ने रु. 59.29 अर्जित किया, जबकि एक महिला आकस्मिक श्रमिक ने एक दिन में रु. 37.97 अर्जित किया - इसमें 20 रु से कुछ अधिक फर्क दिखाई पड़ता है। नगरीय क्षेत्र में, पुरुष-महिला मजदूरी का फर्क कुछ अधिक रु. 35 से कुछ ज्यादा का था। नगरीय क्षेत्रों में, एक पुरुष आकस्मिक श्रमिक एक दिन में रु. 80.70 कमाता था एवं एक महिला एक दिन में रु. 44.57 कमाती थी।

ग - बेरोजगारी दर

- यदि *प्राथमिक स्तर* अभिगम का अनुसरण किया जाए तो ग्रामीण क्षेत्रों के लिए बेरोजगारी दर अधिक नहीं थी - यह लगभग 2 प्रतिशत (पुरुषों के लिए करीब 3 प्रतिशत एवं महिलाओं के लिए करीब 2 प्रतिशत) थी। नगरीय क्षेत्रों में, बेरोजगारी दरें ग्रामीण दरों की तुलना में अधिक थीं, सिवाय *चालू दैनिक स्तर* के, जिसमें बेरोजगारी दरें ग्रामीण एवं नगरीय दोनों क्षेत्रों के लिए लगभग समान (करीब 8 प्रतिशत) थीं।
- बेरोजगारी दर, जिस किसी अभिगम से प्राप्त, नगरीय क्षेत्रों में महिलाओं के लिए पुरुषों के मुकाबले अधिक थी, परन्तु ग्रामीण क्षेत्रों में पुरुषों के लिए यह निम्न थी।
- शिक्षित (शिक्षा स्तर माध्यमिक एवं उससे ऊपर के) व्यक्तियों में 15-29 वर्ष के आयु वर्ग में, ग्रामीण तथा नगरीय क्षेत्रों में बेरोजगारी दर क्रमशः 12 प्रतिशत और 16 प्रतिशत थी, यह दर मिडिल एवं उससे नीचे के शैक्षिक स्तर के व्यक्तियों के लिए अपेक्षाकृत अधिक थी।

घ - अल्परोजगार

प्रत्यक्ष अल्परोजगार दर सूचकों के तीन सेटों द्वारा ज्ञात किया गया है :-

(i) सामान्यतः नियोजित (ps + ss) के चालू साप्ताहिक स्तर, (ii) सामान्यतः नियोजित (ps + ss) के चालू दैनिक स्तर और (iii) चालू साप्ताहिक स्तर के अंतर्गत नियोजितों के चालू दैनिक स्तर । अल्परोजगार की दर उन व्यक्ति-साप्ताह/व्यक्ति-दिन के अनुपात में दिखाया जाता है जिन्होंने (i), (ii) और (iii) के अन्तर्गत काम नहीं किया ।

- साधारणतः नियोजित रहने वाले पर सर्वेक्षण तिथि से पिछले एक सप्ताह के दौरान रोजगार न पाने वाले पुरुषों का अनुपात, जिसे प्रत्यक्ष अल्परोजगार दर बताया जाता है, ग्रामीण क्षेत्रों में 5 प्रतिशत तथा नगरीय क्षेत्रों में 2 प्रतिशत था । पुरुषों के मुकाबले, अल्परोजगार की समस्या सामान्यतः नियोजित महिलाओं में अधिक थी, खासकर ग्रामीण क्षेत्रों में । इनमें अल्परोजगार दर ग्रामीण क्षेत्र में 18 प्रतिशत तक उच्च एवं नगरीय क्षेत्रों में यह 8 प्रतिशत थी ।
- ग्रामीण एवं नगरीय भारत में सामान्यतः नियोजित रहने वाली बगैर काम की महिलाओं के लिए व्यक्ति-दिन अनुपात क्रमशः 35 प्रतिशत एवं 18 प्रतिशत था, जबकि पुरुषों के लिए यह अनुपात ग्रामीण और नगरीय भारत में क्रमशः 11 एवं 5 प्रतिशत था ।
- व्यक्ति-दिनों का प्रतिशत, जिसके दौरान कुछ काम-धंधा करने वाले व्यक्ति संदर्भ सप्ताह के दौरान (चालू साप्ताहिक स्तर के अनुसार) बगैर काम के थे, ग्रामीण पुरुषों के लिए लगभग 6, ग्रामीण महिलाओं के लिए 21, नगरीय पुरुषों के लिए 3 एवं नगरीय महिलाओं के लिए 11 था ।
- इसप्रकार अल्परोजगार की दर तीन सन्निकटन (approximations) के अधीन नगरीय की तुलना में ग्रामीण क्षेत्रों में उच्च पाया गया एवं पुरुषों के मुकाबले महिलाओं में उच्च पाया गया ।

ड. - लोक निर्माण में भागीदारी

- ग्रामीण क्षेत्रों में, 15 वर्ष एवं उससे अधिक की आयु के व्यक्तियों के बीच, केवल 5 प्रतिशत को लोक निर्माण में काम मिला । 7 प्रतिशत ने काम की तलाश की पर काम नहीं मिला एवं करीब 88 प्रतिशत ने काम की तलाश भी नहीं की । पुरुषों के लिए लगभग 6 प्रतिशत को लोक निर्माण में काम मिला, 8 प्रतिशत ने काम की तलाश की पर काम नहीं मिला एवं 85 प्रतिशत ने लोक निर्माण में काम की तलाश नहीं की । महिलाओं के लिए अनुरूपी आंकड़े, क्रमवार 3, 6 एवं 91 थे ।
- जिन व्यक्तियों को लोक निर्माण में काम मिला उनका अनुपात दोनों पुरुष एवं महिलाओं के लिए मा.प्र.उ.व्यय की वृद्धि के साथ कम होता पाया गया । उच्चतर मा.प्र.उ.व्यय की श्रेणी (रु. 690 और अधिक) का अनुपात पुरुषों के लिए निचली मा.प्र.उ.व्यय श्रेणी (रु. 320 से कम) केवल लगभग 1/5वां भाग था - लगभग 9 प्रतिशत निचली मा.प्र.उ.व्यय श्रेणी में और लगभग 2 प्रतिशत उच्चतर मा.प्र.उ.व्यय श्रेणी में । महिलाओं के लिए यह अनुपात लगभग 1/4 था - निचली मा.प्र.उ.व्यय श्रेणी में लगभग 4 प्रतिशत और मा.प्र.उ.व्यय की उच्च श्रेणी में लगभग 1 प्रतिशत ।
- पिछले 365 दिनों में, लोक निर्माण कार्यों में पुरुषों और महिलाओं द्वारा किये गये कार्य दिनों की औसत संख्या लगभग समान थी - पुरुषों के लिए 17 एवं महिलाओं के लिए 18 । पुरुषों के लिए, कार्य दिनों की अधिकतम संख्या मा.प्र.उ.व्यय की उच्चतम श्रेणी (रु. 690 और अधिक) में थी - पिछले 365 दिनों के दौरान 24 दिन । महिलाओं के लिए कार्य दिनों की अधिकतम संख्या मा.प्र.उ.व्यय की (रु. 510 - रु. 690) श्रेणी में थी - पिछले 365 दिनों के दौरान 23 दिन ।
- लोक निर्माण में किये गये कार्यों के लिए प्राप्त औसत मजदूरी पुरुषों के लिए रु. 56 प्रतिदिन और महिलाओं के लिए रु. 54 प्रतिदिन थी ।

HIGHLIGHTS

This report is based on the 62nd round survey on employment and unemployment conducted from July, 2005 to June, 2006. The survey was spread over 4,798 villages and 5,125 urban blocks covering 78,879 households (37,975 in rural areas and 40,904 in urban areas) and enumerating 3,77,377 persons (1,86,571 in rural areas and 1,90,806 in urban areas). Employment and unemployment rates were measured with three different approaches, viz. *usual status* with a reference period of one year, *current weekly status* with a one-week reference period and *current daily status* based on the daily activity pursued during each day of the reference week. Unless otherwise stated, ‘all’ *usual status* workers will mean all workers taking into consideration the *usual principal* and *subsidiary status* taken together. Units of measurement underlying the rates in the subsequent highlights are *persons* in usual status, *person-weeks* in weekly status and *person-days* in daily status. Some of the key findings are stated below.

A. Household and Population Characteristics

- About 74 per cent of the households belonged to rural India and accounted for nearly 76 per cent of the total population.
- In rural areas, about 79 per cent of the households possessed some kind of ‘ration card’. This percentage was lower at 68 in urban areas.
- The (male+ female) population in the age group 15-59 years, which is defined to be prime-age or economically active population, comprised about 58 per cent, of total population in rural areas and about 65 per cent, in urban areas.
- Literacy rate for population of all ages was about 66 per cent for males and 47 per cent for females, in the rural areas. The corresponding urban proportions, were 82 and 70, respectively.
- For persons of age 7 years and above, the literacy rate 74 per cent for males and 52 per cent for females in the rural areas and 89 per cent for males and 77 per cent for females in the urban areas.
- About 16 per cent of the rural and 42 per cent of urban population in the age group 15 years and above reported having education level of ‘*secondary and above*’ defined as educated person in this report.
- About 50 per cent of the persons in the age group 5-29 years were currently attending educational institutions – 49 per cent in rural areas and 53 per cent in urban areas.
- The gender differential in current attendance, for person in the age group 5-29 years, was lower in urban areas as compared to rural areas – 53 per cent of

males and 45 per cent of females in rural areas were attending educational institutions as compared to 55 per cent of males and 51 per cent of females in urban areas.

- Among the persons of age 5-29 years, about 38 per cent in the urban areas and 32 per cent in the rural areas either discontinued or dropped from their studies.
- For the persons in the age group 5-29 years, who were currently attending any educational institutions, nearly 63 per cent were attending Government educational institutions - the share of Government educational institutions was about 70 per cent in rural areas and 40 per cent in urban areas. Private unaided educational institutions along with private aided institution covered about 56 per cent of such persons in the urban areas and 24 per cent in the rural areas.
- Only 1 per cent of the persons in the age group 15 years and above in the rural areas and 5 per cent in urban areas reported having received some formal *technical education* defined as degree in technical education or diploma/certificate below or above graduate level.
- Only about 7 per cent of the rural and 9 per cent of the urban persons in the age group 15-29 years had received vocational (formal and informal) training.

B. Labour Force and Work Force

- According to the *usual status* (ps+ss), about 56 per cent of rural males and 31 per cent of rural females belonged to the labour force. The corresponding proportions in the urban areas were 57 per cent and 15 per cent, respectively.
- About 41 per cent of the population in the country were employed under usual status (ps+ss). The worker population ratio (WPR) was 43 per cent in the rural areas and 35 per cent in the urban areas.
- Distinct gender differential in usual status WPR was observed: 55 per cent for males and 31 per cent for females in the rural areas, and 54 per cent for males and 14 per cent for females in the urban areas.
- The WPRs obtained according to *current daily status* were lower than those obtained in the *current weekly status*, which, in turn, were lower than those according to *usual status* rates: WPR (male plus female as also rural plus urban) as per *current daily status* was 34 per cent and as per *current weekly status*, WPR was 38 per cent, while as per *usual status* approach it was 41 per cent.
- Between 2004-2005 and 2005-06, WPR in the *usual status* approach in rural areas, remained unchanged at 55 per cent for males and it decreased by about 2 percentage points for females, from 33 per cent to 31 per cent . In urban

areas, WPR decreased by about 1 percentage point for males and about 3 percentage points for females.

- In rural India, more than half of the usually employed ('all' workers) were *self-employed* – 57 per cent among males and nearly 62 per cent among females. The corresponding figures in urban India were 42 for males and 44 for females.
- The percentage of *regular wage/salaried employees* was relatively lower among females as compared to males in both rural and urban India: figures being 10 for males and 4 for females in the rural areas and 42 for males and 40 for females in the urban areas.
- The proportion of female *casual labourer* was about 1 percentage point higher than that of male *casual labourer*, in both rural and urban areas.
- In rural India, among 'all' usually employed, about 65 per cent of the males and 81 per cent of the females were engaged in the primary sector (excluding mining and quarrying). Corresponding figures in 1983 were 78 and 88, respectively.
- In rural India, there has been a gradual increase in the proportion of males engaged in 'secondary sector (including mining and quarrying)' – from 10 per cent in 1983 to 17 per cent in 2005-06 for males and 7 per cent to 12 per cent for females.
- The proportion has also increased in the 'tertiary' (NIC-2004 industry division: 50-99) sector – from 12 per cent to 18 per cent among males and from 5 per cent to 7 per cent among females.
- In urban India, the 'tertiary' sector engaged about 59 per cent of the male workers while the 'secondary' sector accounted for about 34 per cent of the usually employed males. For females, the corresponding figures were lower: 52 and 33, respectively. Proportion of urban females employed in the primary sector fell by about 16 percentage points since 1983, with a significant rise for other sectors.
- About 13 per cent of persons – 16 per cent in rural and 3 per cent in urban areas - reported to be pursuing subsidiary economic activity. The proportion was quite similar for males (13 per cent) and females (12 per cent).
- The average wage rate for regular wage/salaried employees, in rural areas, was Rs. 138.74 for males and Rs. 87.71 for females – the difference was of the order of nearly Rs. 50. The wage rate was higher in the urban areas. The corresponding wage rates in the urban areas were Rs. 205.81 for the males and Rs. 158.23 for the females and thus, a female regular wage earner was paid, on an average, around Rs. 50 less compared to males.

- In the rural areas, on an average, Rs. 59.29 was earned in a day by a male casual labourer whereas a female casual labourer earned Rs. 37.97 in a day – showing a difference of a little over Rs. 20. In the urban sector, the male-female wage differential was much higher, of the order of a little over Rs. 35. A male casual labourer in the urban areas, earned Rs. 80.70 in a day and a female, Rs. 44.57 in a day.

C. Unemployment Rate

- The unemployment rate was not high for rural areas if the *usual status* approach is followed- it was around 2 per cent (for males nearly 3 per cent and for females nearly 2 per cent). In urban areas, the unemployment rates were higher than those in the rural rates, except for the *current daily status* approach in which the unemployment rates for rural and urban areas were almost equal (nearly 8 per cent).
- The unemployment rate, obtained by any of the approaches, was higher for females than that for the males in the urban areas, but it was lower than that for males in the rural areas.
- Among *educated* persons, (with education level *secondary and above*), in the age group 15 – 29 years, the unemployment rate in rural and urban areas was 12 per cent and 16 per cent respectively, the rate was much higher than that for those with educational level *middle or below*.

D. Underemployment

Visible under-employment rate is approximated by three sets of indicators:

(i) current weekly statuses of usually employed (ps+ss), (ii) current daily statuses of usually employed (ps+ss) and (iii) current daily statuses of those employed under the current weekly status. Rate of under-employment is given by the proportion of person-weeks/person-days *not* worked under (i), (ii) and (iii).

- The proportion of *usually employed* males who were found to be not employed during the week preceding the date of survey, termed as visible underemployment rate, was 5 per cent in the rural and 2 per cent in the urban areas. Compared to males, the problem of underemployment was more serious among the *usually employed* females, particularly in the rural areas. Among them, the underemployment rate was as high as 18 per cent in the rural and 8 per cent in the urban areas.
- The proportion of *person-days* without work of the *usually employed* was about 35 per cent and 18 per cent for females in rural and urban India,

respectively as against 11 and 5 per cent for males in rural and urban India, respectively.

- The percentage of *person-days* on which persons with some work during the reference week (according to *current weekly status*) were without work was about 6 for rural males, 21 for rural females, 3 for urban males and 11 for urban females.
- The rate of under-employment was thus found higher in rural than urban and higher for females than for males under the three approximations.

E. Participation in Public Works

- Among the persons of age 15 years and above in the rural areas, only 5 per cent got work, 7 per cent sought but did not get work and nearly 88 per cent did not even seek work in *public works*. For males, nearly 6 per cent got work, 8 per cent sought but did not get work and 85 per cent did not seek work in *public works*. The corresponding figures for females were, 3, 6 and 91 respectively.
- The proportion of persons who got work in *public works* decreased with the increase in the MPCE for both males and females. The proportion in the top MPCE class (Rs. 690 and above) for males was only about one-fifth of that in the bottom MPCE class (less than Rs. 320) – nearly 9 per cent in the bottom MPCE class and nearly 2 per cent in the top MPCE class. For females this ratio was about one-fourth – nearly 4 per cent in the bottom MPCE class and nearly 1 per cent in the top MPCE class.
- The average number of days worked in *public works*, during the last 365 days, by males and females was almost the same- 17 for males and 18 for females. The maximum number of days worked, for males, was in the top MPCE class (Rs. 690 and above) – 24 days during the last 365 days. For females maximum number of days worked was in the MPCE class (Rs. 510 – Rs. 690) - 23 days during the last 365 days.
- Average wages received per day, for work in *public works*, was Rs. 56 for males and Rs. 54 for females.

Chapter One

Introduction

1.1 The report in perspective

1.1.1 An all-India survey on the situation of employment and unemployment in India during the period July, 2005 to June, 2006 was carried out as part of the annual series in the 62nd round of the National Sample Survey Organisation (NSSO). In this survey, a nation-wide enquiry was conducted in a moderately large sample of households to provide estimates on various characteristics pertaining to employment and unemployment in India and some characteristics associated with them at the national and state levels. Information on various facets of employment and unemployment in India were collected through a schedule of enquiry (Schedule 10). These apart, information on vocational training, formal and non-formal, received by persons in the age group 15-29 and information on current attendance in educational institutions for persons of age less than 30 years was also collected. Further, for persons of age 15 years and above, in the rural areas, information regarding participation in *public works* was also collected, for the first time in this round. Based on the data collected during the survey period, estimates pertaining to employment-unemployment in India along with various characteristics associated with these have been presented in this report.

1.2 Background

1.2.1 *Past Surveys*: To assess the volume and structure of employment and unemployment, starting with the 9th round (May-September, 1955), NSSO conducted a number of surveys on employment and unemployment. To give a firm conceptual framework for conducting such surveys, the Planning Commission, in the year 1970, set up an 'Expert Committee on Unemployment Estimates', (popularly known as the Dantwala Committee), which reviewed these surveys and the indicators generated from such surveys. Based on concepts and definitions recommended by this Committee, the first quinquennial survey on employment and unemployment was conducted in the 27th round of NSS. After the 27th round, quinquennial surveys on employment and unemployment situation in India have been carried out by the NSSO, during the 32nd round (July 1977 - June 1978), 38th round (January 1983 - December 1983), 43rd round (July 1987 - June 1988), 50th round (July 1993 - June 1994) and 55th round (July 1999 - June 2000), in which concepts, definitions and procedures were based primarily on the recommendations of the Dantwala Committee. The results of these surveys have been brought out in the form of NSS reports. The seventh quinquennial survey on employment and unemployment situation in India have been carried out by NSSO in its 61st round (July 2004 - June 2005).

1.2.2 *Other surveys on employment-unemployment*: Apart from these quinquennial surveys on employment and unemployment, NSSO has been regularly collecting information on certain key items on employment and unemployment, as a part of annual series, from a smaller sample of households in each round since its 45th round (July 1989 - June 1990) through the schedule on Household Consumer Expenditure (Schedule 1.0). The objective of data collected in the annual series was, measuring employment and unemployment indicators in terms of the usual and current weekly statuses only, and study of these indicators in respect of category of employment, industrial distribution of the usually employed, etc. These procedures continued till the 59th round of NSS. In the NSS 60th round survey, there was a

significant change in respect of the procedure of data collection and content of information as compared to the earlier annual rounds. In the NSS 60th round, a separate schedule (Schedule 10) on employment and unemployment was canvassed in a separate set of sample household to enable providing estimates of employment and unemployment on the basis of current daily status approach also.

1.2.3 *The present survey*: In terms of subject coverage for employment and unemployment (Schedule 10), this survey is broadly similar to the NSS 60th round. On the request of the Planning Commission, additional information regarding the possession of different types of 'ration cards' by the households and the participation of the household members in the rural areas in various *public works* programmes were also collected. Further, to meet the requirements of the Ministry of Human Resource Development, information on current attendance in educational institutions by persons of age below 30 years and the type of educational institutions being attended by the persons currently attending educational institutions was also collected. Instead of collecting detailed particulars on formal vocational training, as was done in NSS 60th round, it was enquired from the household members, of age 15 – 29 years, whether they received or receiving 'formal' or 'non-formal' vocational training. Besides, information was collected on whether the household members (of age 15 – 29 years) were receiving formal vocational training. For the purpose of collection of information on industry of activity, National Industrial Classification (NIC), 2004 was used in this survey. Particulars of persons unemployed on all the 7 days of the week, which was collected in the NSS 60th round and other quinquennial rounds, was not collected in this round. The facsimile of Schedule 10 used in the NSS 62nd round is given in Appendix C.

1.3 Scope of the survey

1.3.1 *Items of enquiry*: As in the quinquennial surveys, in the present survey too, NSSO collected data on some characteristics, based on which, estimates of employment and unemployment, measured in terms of three basic approaches, viz., usual status, current weekly status and current daily status can be obtained. The reference period for these approaches differ - it being 365 days preceding the date of survey for 'usual status', 7 days preceding the date of survey for 'current weekly status' and each day of the 7 days preceding the date of survey for 'current daily status'.

1.3.2 Data were collected on the activity status of all persons, i.e. for workers, for those seeking or available for work and also for those remaining out of labour force. A worker could be self-employed or enjoy regular salaries/wages or be employed on casual wage basis. Data on this aspect, along with the industry of work of the worker and his/her occupation, were collected during this survey. In order to reveal the multi-dimensional features of the employment-unemployment situation in India, information on several correlates pertaining to it were also gathered. Information on participation of the household members of age 15 years and above, in the rural areas, in *public works* programmes, was additionally collected. To study the employment and unemployment in proper perspective, information on current attendance in educational institutions for persons of age below 30 years was also collected. To have an idea about the skill level of the population, information on, whether the household member of age 15 –29 years, received 'formal' or 'non-formal' vocational training and whether they were receiving formal vocational training were collected.

1.3.3 All the estimates presented in this report are based on the Central sample data only. This report deals, in some details, with the employment-unemployment estimates measured

in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with their correlates. It also covers some aspects of underemployment. The results relating to the participation in various *public works* programmes by the household members of age 15 years and above, in the rural areas, form an important part of the report. The report gives the results generated at all-India level and some important results for different States/ Groups of Union Territories and North-Eastern States. As the sample sizes for the smaller States and Union Territories may not be adequate enough for getting reliable estimate separately for each of them, instead of giving results for each of the Union Territories and North-eastern states separately, results have been presented in the report for a group of all the Union Territories and a group of all the North-eastern states.

1.3.4 Geographical Coverage: The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. All the sample first-stage units of the districts Poonch and Rajouri of Jammu & Kashmir, became casualty and therefore, the districts Poonch and Rajouri of Jammu & Kashmir, are outside the survey coverage. . Thus, the estimates of Jammu and Kashmir and all-India estimates do not include these two districts.

1.4 The survey outline

1.4.1. Method of data collection: The survey used the recalled-based interview method using a schedule for data collection from a sample of randomly selected households. The sample design on the basis of which the selection of households was made is stated in brief in the following sub-section.

1.4.2 Period of survey and work programme: The fieldwork of 62nd round of NSSO started from 1st July, 2005 and continued till 30th June, 2006. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1st sub-round period ranging from July to September, 2005, the 2nd sub-round period from October, 2005 to December, 2005, 3rd sub-round from January, 2006 to March, 2006 and 4th sub-round from April, 2006 to June, 2006. An equal number of sample villages/blocks (FSUs), as far as possible, were allotted for survey in each of these four sub-rounds.

1.5 Sampling design

1.5.1 An outline of the sampling design: The 62nd round (July 2005 - June 2006) of NSS was earmarked for survey on unorganised manufacturing enterprises, annual survey of consumer expenditure and survey on employment – unemployment. The sampling design adopted for the survey was essentially a stratified multi-stage one for both rural and urban areas. Two frames were used for this survey viz. List frame and Area frame. List frame was used only for urban sector and that too for selection of manufacturing enterprises only and thus is not relevant for discussion in this report. Area frame was adopted for both rural and urban sectors for selection of First Stage Units (FSU) and the estimates presented in this report are based on sample FSUs (villages in the rural areas and UFS blocks in the urban areas) selected from the area frame. For the area frame, the list of villages as per census 2001 (for Manipur, 1991 census was used since 2001 census list was not available) was used as frame for the rural sector and the latest available list of UFS blocks was used as frame in the urban

sector. However, EC-98 was used as frame for the 27 towns with population 10 lakhs or more (as per Census 2001). The ultimate stage units (USU) were households, in both the sectors. In the case of large villages/ blocks requiring hamlet-group (hg)/ sub-block (sb) formation, one intermediate stage was the selection of two hgs/ sbs from each FSU. Details of the sample design and estimation procedure is given in Appendix B.

1.5.2 Sample Size – first stage units: At the all-India level, a total number of 9997 FSUs (4847 villages in the rural areas and 5150 UFS blocks in the urban areas) for area frame were allocated on the basis of investigator strength. The allocation between rural and urban sectors was made in proportion to the number of unorganised non-agricultural workers as per EC-98. The total (all-India) rural/ urban sample FSUs were allocated to different States and U.Ts. in proportion to number of unorganised non-agriculture workers as per EC-98 subject to the availability of investigators ensuring more or less uniform work-load. Within each sector of a State/ U.T, the respective sample sizes were allocated to the different strata in proportion to the stratum population as per census 2001. Out of these 9997 FSUs allotted for survey, 9923 FSUs could be surveyed - 4798 in rural and 5125 in urban. Note that in the 62nd round, a sample of 10706 FSUs (4962 villages and 5744 urban blocks) was also selected for survey by the state agencies (State sample) at the all-India level.

1.5.3. Sample size – second stage units: For Schedule 10, a sample of 8 households was planned to be surveyed from each selected village and urban block. In the Central sample, 78879 households were actually surveyed – 37975 in rural areas and 40904 in urban areas. As regards the actual number of persons surveyed, it was 186571 in the rural sector and 190806 in the urban sector.

1.6 Contents of the Report

1.6.1 As stated earlier, this report deals with various estimates on employment and unemployment along with their correlates as obtained from data collected on relevant items for the entire round. Consequently, all discussions in this report are limited to only such items/concepts, based on which estimates have been generated. A detailed explanation of these is given in the next chapter entitled ‘Concepts and Definitions’.

1.6.2 This report contains three chapters, including the present introductory chapter, and three appendices. Chapter Two states in detail the concepts and definitions of terms used in the survey in connection with the various items covered in this report. Chapter Three discusses the main findings of the survey. While the detailed tables based on which this report is brought out are presented in the Appendix A, the sample design and the estimation procedure is given in Appendix B. The facsimile of the schedule is given in Appendix C.

Chapter Two

Concepts and Definitions

2.0 The concepts and definitions of some important terms used in the survey and relevant to this report are explained in the following paragraphs.

2.1 **Household:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.

2.2 **Household type:** The household types were assigned on the basis of the sources of the household's income during the last 365 days preceding the date of survey. For this purpose, only the household's income from economic activities was considered. The income of servants and paying guests was not taken as the income of the household. Household types have been arranged as follows:

For **rural** areas, household types were as follows:

- self-employed in:
 - agriculture (*code – 4*),
 - non-agriculture (*code – 1*),
- rural labour:
 - agricultural labour (*code – 2*),
 - other labour (*code – 3*),
- residual other households (*code – 9*).

For **urban** areas, the household types were as follows:

- self-employed (*code – 1*),
- regular wage/salary earning (*code – 2*),
- casual labour (*code – 3*),
- residual other households (*code – 9*).

2.2.1 Procedure for assigning household type codes in rural sector: For a **rural** household, if a single source (among the five sources of income listed in preceding paragraph) contributes 50% or more of the household's income from economic activities during the last 365 days, the type code (1, 2, 3, 4 or 9) corresponding to that source is assigned.

For a household to be classified as 'agricultural labour' or 'self-employed in agriculture' (code 2 or 4) its income from that source must be 50% or more of its total income. If there is no such source yielding 50% or more of the household's total income, code 1, 3 or 9 was given according to the following procedure.

To be classified as self-employed in non-agriculture (code 1), the household's income from that source must be greater than its income from rural labour (all wage-paid manual labour) as well as that from all other economic activities put together (a three-way division is to be considered here).

A household not getting code 1, 2 or 4 is to be classified as other labour (code 3) if its income from rural labour (all wage-paid manual labour) is greater than that from self-employment as well as that from other economic activities (again a three-way division). All other households will get type code 9.

2.2.2 For **urban** areas the different urban type codes correspond to four sources of household income, unlike the rural sector where five sources are considered. An urban household is to be assigned the type code 1, 2, 3 or 9 corresponding to the major source of its income from economic activities during the last 365 days. A household, which does not have any income from economic activities, is to get type code 9 (residual other households).

2.3 Household monthly per capita consumer expenditure (MPCE): Household consumer expenditure from employment and unemployment schedule (Schedule 10) during the last 30 days was ascertained through direct questions, out of the following five sources

- i) purchase
- ii) home-grown/home-produced stock
- iii) receipt in exchange of goods and services
- iv) transfer receipts such as gifts, loans, charities, etc.
- v) free collection.

The items of consumption were classified into four groups and three different approaches viz (a) consumption approach, (b) expenditure approach and (c) first-use approach, were followed for defining consumption of items. The different groups were (i) *food (other than 'cooked meals'), pan, tobacco & intoxicants and fuel & light*, (ii) *cooked meals, miscellaneous goods and services including education, medical, rent, taxes and cess*, (iii) *clothing and footwear* and (iv) *durable goods*. The procedure followed for defining consumption of the four groups were (a) *consumption approach*, (b) *expenditure approach*, (c) *first-use approach* and (d) *expenditure approach*, respectively.

2.4 General educational level: A person was considered as literate if he/she could both read and write a simple message with understanding in at least one language. For all the individuals who were found to be literate, the general level of education was collected in terms of highest level of education successfully completed. Highest level of education successfully completed by each member of the household was decided by considering his/ her all general/ technical/ vocational educational level and was recorded in terms of 12 categories viz. (i) *not literate*, (ii) *literate without formal schooling: (a) Education Guarantee Scheme (EGS)/Non-formal Education Courses (NFEC)/ Adult Literacy Centres (AEC)*, (b) *Total Literacy Campaign (TLC)*,

(c) others; literate (iii) below primary, (iv) primary, (v) middle, (vi) secondary, (vii) higher secondary, (viii) diploma/certificate course, (ix) graduate, and (x) postgraduate and above. The criterion for deciding primary, middle, secondary, etc. levels were the same that has been followed in the concerned states/union territories. The category 'diploma or certificate course' meant diploma or certificate courses in general education, technical education or vocational education, which is below graduation level. Diploma or certificate courses in general education, technical education or vocational education, which is equivalent to graduation level, was considered under the category 'graduate'. Similarly, diploma or certificate courses in general education, technical education or vocational education, which is equivalent to post-graduation level and above were considered under the category 'post-graduate and above'.

2.5 Technical educational level: The highest level of technical education successfully completed by each member of the household was recorded in terms of 12 categories viz. (i) no technical education, (ii) technical degree in agriculture / engineering / technology / medicine etc. (iii) diploma or certificate below graduate level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, and (iv) diploma or certificate equivalent to graduate and above level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects. Technical diploma or certificate in 'other subjects' included diploma or certificate in management, applied arts, etc.

2.6 Status of current attendance in educational institution: Particulars of current attendance in educational institution were recoded for persons of age below 30 years. It was ascertained whether the person was currently attending any educational institutions (government or private) or not. Persons who were registered for any regular correspondence courses or distance education courses for a stipulated period at the end of which, were allowed to appear in the examination for the course, were also considered as 'currently attending'. Persons who were awaiting results were considered as 'currently attending' and the appropriate level for which they had appeared in the examinations were considered as the level of current attendance. Persons who were temporarily not attending due to reasons like illness, vacation, etc. were treated as currently attending. For persons who were not currently attending any educational institutions, reason for not attending viz. (i) school too far, (ii) to supplement household income, (iii) education not considered necessary, (iv) to attend domestic chores, and (v) others, was recorded separately for those 'never attended', 'discontinued studies' and 'dropped out'. For those who were currently attending any educational institution, the course of study pursued by them was recorded in terms of 20 categories viz. (i) Education Guarantee Scheme (EGS)/Non-formal Education Courses (NFEC)/ Adult Literacy Centres (AEC), (ii) Total Literacy Campaign (TLC), (iii) pre-primary (nursery/Kinder garten, etc.), (iv) primary (class I to IV/V), (v) middle, (vi) secondary and higher secondary, (vii) graduate and above in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) other subjects, (viii) diploma or certificate (below graduate level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, (ix) diploma or certificate (graduate and above level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subject.

2.6.1 Dropped out and discontinued studies: Dropped outs were those who while attending a level as specified for the general education (say, primary or middle or secondary or higher secondary, etc.) discontinued study before successfully completing that level. Discontinued cases were those who discontinued study after successfully completing a level as specified for the general education. That is, a person was considered as 'discontinued studies' if he/she had successfully completed a level of education, as specified for the general education, and thereafter, had not enrolled for the next level.

2.7 Type of institution: The type of institution referred to the type of management by which the institution was run. For those who were currently attending any educational institution, the type of institution was recorded in terms of 5 categories viz. (i) *Government*, (ii) *Local body*, (iii) *Government aided private institution*, (iv) *Private unaided*, and (v) *not known*. All schools/ institutions run by the State, Central Government, Public Sector Undertakings or Autonomous Organisations, which were completely financed by the Government were treated as government institutions. Schools/ institutions which were mainly financed by the government and some intervention of government was there in the management were also treated as government institutions. All institutions run by municipal corporations, municipal committees, notified area committees, zilla parishads, panchayat samitis, cantonment boards, etc. were treated as local body institutions. Private institution was one, which was run by an individual or a private organization. An institution which was run by an individual or a private organisation and received only some maintenance grant from the Government or local body were identified as government aided private institution. Private unaided institution was one that was managed by an individual or a private organisation and not received maintenance grant either from a Government or a local body. An institution which was managed by private body but got aid from international body, be it government or private, was considered as private unaided institution.

2.8 Vocational training: The main objective of vocational education and training is to prepare persons, especially the youth, for the world of work and make them employable for a broad range of occupations in various industries and other economic sectors. A vocational training was broadly defined as a training, which prepared an individual for a specific vocation or occupation. It aims at imparting training to persons in very specific fields through providing significant ‘hands on’ experience in acquiring necessary skill in the specific vocation or trade, which make them employable or create for them opportunities of self-employment.

2.8.1 Formal vocational training: The vocational training that took place in education and training institutions which followed a structured training programme and led to certificates, diplomas or degrees, recognised by State/Central Government, Public Sector and other reputed concerns was considered as formal vocational training. By structured training programme, it was meant that (i) the training programme had a definite title with prescribed syllabus and curriculum and a specified duration of the training, and (ii) the training had some entry level eligibility in terms of education and age.

2.8.2 Non-formal vocational training: The expertise in a vocation or trade is sometimes acquired by the succeeding generations from the other members of the households, generally the ancestors, through gradual exposures to such works. The expertise gained through significant ‘hands-on’ experience enables the individual to take up activities in self-employment capacity or makes him/her employable. Acquiring such marketable expertise by one, which enabled him/her to carry out the trade or occupation of their ancestors over generations, was considered as receiving ‘non-formal’ vocational training through ‘hereditary’ sources. ‘Non-formal’ vocational training received by a person to pursue a vocation different from the trade or occupation of their ancestors, was considered as ‘non-formal’ vocational training through ‘other’ sources. The ‘other’ sources also included the cases where the expertise to carry out the trade or occupation of their ancestors was acquired from sources other than the household members.

2.9 Public works: ‘Public works’ were those activities which were sponsored by Government or Local Bodies, and which covered local area development works like construction of roads, dams, bunds, digging of ponds, etc., as relief measures, or as an outcome of employment generation schemes under the poverty alleviation programme such as Employment Guarantee Scheme (EGS), Sampoorna Grameen Rozgar Yojana (SGRY), National Food for Work Programme (NFFWP), etc. The coverage of schemes under ‘public works’ was restricted to those schemes through which the Government generated wage employment under poverty alleviation programme, or relief measures. The types of works that were generally undertaken through these schemes, were watershed development, drought proofing, land levelling, flood control, laying pipes or cables, sanitation, water harvesting, irrigation canal, development of orchard, road construction, building construction / repair, running crèche, etc. To distinguish between ‘*public works*’ and works not classifiable as ‘*public works*’, some broad characteristics of ‘*public work*’ were identified, viz. the primary objective is generation of wage employment and poverty alleviation, and creation of community asset as an outcome in achieving those main objectives.

2.10 Whether got work in public works during last 365 days: For each household member of age 15 years and above in rural areas, situation in respect of whether (i) he/she got work, at least for a day, in any ‘*public works*’ during last 365 days, irrespective of the type of public works and number of such works executed in the locality, or (ii) sought work but did not get work in public works, or (iii) did not seek work in public works, was ascertained and was recorded in terms codes.

2.11 Number of days employed in public works: Information on the number of days that a household member of age 15 years and above in the rural areas who got work in public works during last 365 days, was collected. The number of days worked by the household member was obtained irrespective of the duration of work done by the household member in a day.

2.12 Total wages received for works done in public works (Rs.): Wages received for work done in public works, during the last 365 days, by the household member was recorded in whole number of rupees. The wages received for work done in public works was related to the payments received or receivable for the total number of days on which a household member worked in public works during the last 365 days. If in a day a household member worked in public works as well as in other type of works, the entries in these columns will relate to wages received/ receivable for work done in public works only. Information on wages in cash or kind, evaluated at the current retail price, received/ receivable, for the work done in public works was collected.

2.13 Whether made any complaint to any authority: There are provisions in some schemes under public works that a person, who is eligible to get public work but did not get it, not due to his/ her lack of efforts to get such work, but for reasons, entirely attributable to the authorities/ agencies entrusted with the task of executing the public work, may make a complaint to panchayat or BDO/ SDO/ other Govt. official of the authorities/agencies responsible for sponsoring or execution of the public works. The complaint may be either written or oral. There may be cases where the household member had not complained but knew that there was provision for complaining, or the household member had not known that provision for complaining existed. Information on this aspect was collected in respect of the following four types of situations: i) complained to panchayat, ii) complained to BDO/ SDO/ other Govt.

official, iii) knew that there was provision for complaining but did not complain and iv) did not know that there was provision for complaining

2.14 Type of public works: Information on the 'type of public works' was collected for rural samples only and for those members of the household who had been assigned status code 41 (casual wage labour in public works) in the current daily activity status. The type of public works done by the household member was recorded in codes in respect of the following types of public works:

irrigation canal/ water conservation/ water harvesting/
drought proofing /flood control/ embankment, etc.

land leveling, development of orchard, etc.

road construction, laying pipes and cables

building construction/ repair

sanitation, running crèche, etc.

any other work.

2.15 Economic activity: The entire spectrum of human activity falls into two categories – economic activities and non-economic activities. Any activity resulting in production of goods and services that add value to national product was considered as an economic activity for the employment and unemployment survey. Such activities included production of all goods and services for market (i.e. for pay or profit) including those of government services, and, the production of primary commodities for own consumption and own account production of fixed assets.

2.15.1 The full spectrum of economic activities as defined in the UN system of National Accounts (1993) was not covered in the definition adopted for the NSS 62nd round survey of Employment and Unemployment. Production of any good for own consumption is considered as economic activity by UN System of National Accounts(UNSNA 1993) but production of only primary goods for own consumption was considered as economic activity by NSSO. While the former considers activities like own account processing of primary products as economic activities, in the NSS surveys, processing of primary products for own consumption was not considered as economic activity.

2.15.2 The term 'economic activity' as defined in the employment and unemployment survey of NSS 62nd round, therefore, included:

- (i) all the market activities performed for pay or profit which result in production of goods and services for exchange.

(ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e. industry Divisions 01 to 14 of NIC-98) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption

and

(b) activities relating to the own-account production of fixed assets, which include production of fixed assets includes construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labourer or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered as economic activities. Activity status of a person was judged irrespective of the situation whether such activity was carried out illegally in the form of smuggling or not.

2.16 Activity status: It is the activity situation in which a person was found during the reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

- (i) working or being engaged in economic activity (work) as defined above,
- (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and
- (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

2.16.1 Identification of each individual in terms of a unique activity status could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained for a person. In such an eventuality, the identification uniquely under any one of the three broad activity statuses was done by adopting either *the major time* or *priority criterion*. The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the 'current activity status' approach. Each of the three broad activity statuses was further sub-divided into several detailed activity categories. If a person categorised as engaged in economic activity by adopting one of the two criteria mentioned above was found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity status code related to that activity in which relatively more time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one non-economic activities.

2.16.2 The detailed activity statuses under each of the three broad activity statuses (viz. employed, unemployed and not in labour force) and the corresponding codes used in the survey are given below:

<u>code</u>	<u>description</u>
working (or employed)	
<i>self-employed</i>	
11	worked (self-employed) in household enterprises as own-account worker
12	worked (self-employed) in household enterprises as an employer
21	worked (self-employed) in household enterprises as helper
<i>regular wage/ salaried employee</i>	
31	worked as regular wage/salaried employee
<i>casual labour</i>	
41	worked as casual wage labour in public works
51	worked as casual wage labour in other types of works
61	did not work owing to sickness though there was work in household enterprise
62	did not work owing to other reasons though there was work in household enterprise
71	did not work owing to sickness but had regular salaried/wage employment
72	did not work owing to other reasons but had regular salaried/wage employment
not working but seeking/available for work (or unemployed)	
81	sought work or did not seek but was available for work (for usual status approach)
81	sought work (for current weekly status approach)
82	did not seek but was available for work (for current weekly status approach)
neither working nor available for work (or not in labour force)	
91	attended educational institutions
92	attended to domestic duties only
93	attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use
94	rentiers, pensioners, remittance recipients, etc.
95	not able to work owing to disability
97	others (including beggars, prostitutes, etc.)
98	did not work owing to sickness (for casual workers only)
99	children of age 0-4 years

It may be noted that codes 61, 62, 71, 72, 82 and 98 were applicable for current weekly status and current daily status approaches only.

2.17 Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. Relevant activity status codes within 11 to 72 were assigned for workers. Workers were further categorized as *self-employed* (relevant activity status

codes: 11, 12, 21, 61, 62), *regular salaried/wage employee* (relevant activity status codes: 31, 71, 72), and *casual wage labour* (relevant activity status codes: 41 and 51).

2.18 *Seeking or available for work (or unemployed)*: Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those 'seeking or available for work' (or unemployed). Activity status codes 81 or 82 were assigned for unemployed.

2.19 *Labour force*: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 – 82 constituted the labour force.

2.20 *Not in labour force*: Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working due to sickness. Activity status codes 91-95, 97 and 98 were assigned for persons belonging to category 'not in labour force'.

2.21 *Self-employed*: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (decide how, where and when to produce) and *economic independence* (in respect of choice of market, scale of operation and finance) for carrying out their operation. The remuneration of the self-employed consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise. The combined remuneration is wholly determined by the revenue from sales after netting out value of purchased inputs used in production.

2.21.1 *Categories of self-employed persons*: Self-employed persons were categorised as follows:

- (i) ***own-account workers*:** those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;
- (ii) ***employers*:** those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and
- (iii) ***helpers in household enterprise*:** those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.

2.22 Regular wage/salaried employee: These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.23 Casual wage labourer: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labourer.

2.24 Different approaches followed to determine activity status: The persons surveyed were classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. There were three reference periods for this survey. These are: (i) one year (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status are arrived at. These are termed respectively as usual status, current weekly status and current daily status. However, in this report, the first measure has been used to determine the number of workers and current daily status approach has been used to determine the wage and salary earnings per day received by wage /salaried employees according to usual status for each industry group/ tabulation category and enterprise type in which they were usually engaged. As such the procedures adopted to arrive at the usual status and current daily status are elucidated below.

2.24.1 Usual principal activity status: The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the *usual principal activity status* of the person. To decide the usual principal activity of a person, first a two stage dichotomous-classification was followed for determining the broad usual principal activity status (employed or unemployed or not in labour force) of the person. At the first stage, persons were first categorised as those in the *labour force* (either employed or unemployed) and those *not in the labour force* depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (*not in the labour force*). At the second stage, for persons belonging to the labour force, the broad activity status of either 'working' (*employed*) or 'not working but seeking and/or available for work' (*unemployed*) was ascertained based on the same criterion viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer time spent on such activities. In terms of activity status codes, codes 11-51 were assigned to persons classified as workers and codes 91-97 to those not in the labour force. In the usual status approach, a single code 81 was assigned to persons seeking or available for work (unemployed persons) while two separate codes 81 (sought work) and 82 (did not seek but was available for work) were assigned to unemployed persons according to current weekly status and current daily status approach.

2.24.2 Usual subsidiary economic activity status: A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a

minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11-51 only were used for the subsidiary economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the two following situations:

- (i) a person may be engaged in a relatively longer period during the last 365 days in some economic (non-economic) activity and for a relatively minor period, which is not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively minor period *but not simultaneously with principal activity*, was considered as his/her subsidiary economic activity.
- (ii) a person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively shorter time in a subsidiary capacity. The economic activity, which was pursued for a relatively shorter time, was considered as his/her subsidiary economic activity.

2.24.3 Usual activity status considering principal and subsidiary status taken together: The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

2.24.4 Current weekly activity status: The current weekly activity status of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided *on the basis of a certain priority cum major time criterion*.

2.24.4.1 According to the *priority criterion*, the status 'working' gets priority over the status 'not working but seeking or available for work' that, in turn, gets priority over the status 'neither working nor available for work'. A person was considered working (or employed) if he/she, while pursuing any economic activity, had worked for at least one hour on at least one day during the 7 days preceding the date of survey. A person was considered 'seeking or available for work (or unemployed)' if, during the reference week, no economic activity was pursued by the person but he/she made efforts to get work or had been available for work any time during the reference week though not actively seeking work in the belief that no work was available. A person who had neither worked nor was available for work any time during the reference week was considered as engaged in non-economic activities (or not in labour force).

2.24.4.2 After deciding the *broad current weekly activity status* of a person on the *basis of 'priority' criterion*, the *detailed current activity status* was then decided *on the basis of 'major time' criterion if that person pursued multiple economic activities*. The current weekly activity status of a person could be any of the valid codes within 11 to 98. Of these codes, 11 to 72 pertained to workers, 81 to 82 for unemployed and 91 to 98 for persons not in the labour force.

2.24.5 Current daily activity status: The activity pattern of the population, particularly in the unorganised sector, is such that during a week, and sometimes, even during a day, a person could pursue more than one activity. Moreover, many people could even undertake both economic and non-economic activities on the same day of a reference week. The current daily activity status for a person was determined on the basis of his/her activity status on each day of the reference week *using a priority-cum-major time criterion* (day to day labour time disposition). Time disposition was recorded for every member of the sample households. This involved recording of different activities pursued by the members along with the time intensity in quantitative terms for each day of the reference week. The current daily activity of a person is generally denoted by his status-cum-industry. For a persons in the rural areas, who had current daily activity status 41 (casual wage labour in public works), if the type of public works performed by the person on a day was different even for the same industry, these were considered as different activities. Thus, for a person in the rural areas with the same status, if the industry divisions (2-digit NIC-2004 code) were different (for activity status code 41, if either industry or type of public works done was different) on the same or different days, he/she was considered to have pursued different activities. In urban areas, the current daily activity of a person was denoted by his status-cum-industry. Thus, if a person in urban area (urban sample) was engaged in the public works on half-a-day, say, 'road construction, laying pipes and cables' as casual wage labourer (i.e., with status code 41) and on other half of the day he/she was engaged in other public work, say, 'building construction/ repair' as casual labourer (i.e., with status code 41), he/she was considered to have only one activity. But, in rural areas (rural sample), he/she was considered to have two activities on that day. The description (and codes used) of current daily activity statuses is the same as those of current weekly activity status. The following points were considered for assigning the time intensity and determining the current daily status of a person:

- i) Each day of the reference week was looked upon as comprising either two 'half days' or a 'full day' for assigning the activity status. For recording time disposition for activities pursued by a person in a day, an intensity of 1.0 was given against an activity that was done for 'full day' and an intensity of 0.5 against the activity which was done for 'half day'.
- ii) A person was considered 'working' (employed) for the full day if he/she had worked for 4 hours or more during the day.
- iii) If a person was engaged in more than one economic activities for 4 hours or more on a day, he/she was assigned two out of the various economic activities on which he/she devoted relatively longer time on the reference day. In such cases, an intensity of 0.5 was given for each of these two economic activities.
- iv) If the person had worked for 1 hour or more but less than 4 hours, he/she was considered 'working' (employed) for half-day and 'seeking or available for work' (unemployed) or 'neither seeking nor available for work' (not in labour force) for the other half of the day depending on whether he was seeking/available for work or not.
- v) If a person was not engaged in any 'work' even for 1 hour on a day but was seeking/available for work for 4 hours or more, he was considered 'unemployed' for the entire day. But if he was 'seeking/available for work' for more than 1 hour and less than 4 hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day.

- vi) A person who neither had any 'work' to do nor was available for 'work' even for half a day was considered 'not in labour force' for the entire day and was assigned one or two of the detailed non-economic activity statuses depending upon the activities pursued during the reference day.

2.24.6 The current weekly status of a person is derived from the intensities assigned for the daily activities performed by a person during the 7 days of the reference week.

2.25 Industry and occupation of the work activity: For the employed persons, to record the industry of work, 5-digit classification of NIC-2004 was used and to record the type of occupation, 3-digit classification of NCO-1968 was used. To identify certain category of workers under Division 95 (Private households with employed persons) of NIC-2004, eight additional codes were used in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005), tutor (95006), driver (95007) and 'others' (95009). Industry Divisions 96 and 97 of NIC-2004 were not used for the purpose of collection of information on industry of activity. The entire activities described under Division 97 are not under the production boundary of Indian System of National Accounts (ISNA) and are not also considered as economic activities in the NSS survey. A part of the activities under Division 96 (viz., hunting and gathering, farming and the production of shelter), which is within the production boundary of ISNA, is also considered as economic activities in NSS surveys and the industry of these undifferentiated activities will be judged in the usual manner as is done now, by considering the industry in which major time is spent. Thus, this part of activities got classified against the respective industries under divisions 01-14 relating to the primary sector or 45 relating to construction. The rest of Division 96 is outside the production boundary of ISNA and was not considered as economic activity for the NSS survey.

2.26 Manual work: A job essentially involving physical labour was considered as manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involved some amount of physical labour. But, peons, chowkidars, watchmen, etc. were considered manual workers even though their work might not involve much physical labour. Manual work was defined as work pursued in one or more of the following occupational groups of the National Classification of Occupations (NCO 1968):

Division 5 (Service workers):

Group 52: cooks, waiters, bartenders and related workers (domestic and institutional).

Group 53: maids and other housekeeping service workers (not elsewhere classified).

Group 54: building caretakers, sweepers, cleaners and related workers.

Group 55: Launderers, dry cleaners and pressers.

Group 56: hair dressers, barbers, beauticians and related workers.

Family 570: fire fighters

Family 574: watchmen, gate-keepers

Family 579: protective service workers not elsewhere classified.

Division 6 (Farmers, Fishermen, Hunters, Loggers and related workers):

Group 63: agricultural labourers

Group 64: plantation labourers and related workers

Group 65: other farm workers

Group 66: forestry workers

Group 67: hunters and related workers

Group 68: fishermen and related workers.

Division 7-8-9 (Production and related workers, transport equipment operators and labourers):

All groups excluding group 85 (electrical fitters and related workers) and group 86 (broadcasting station and sound equipment operators and cinema projectionists).

2.27 Rural labour: Manual labour working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour), either of casual or regular basis, and *living in rural areas*, was taken as rural labour.

2.28 Wage paid-manual labour: A person who did manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) was considered as a wage paid manual labour. Salaries were also counted as wages. A person who was self-employed in manual work was *not treated* as a wage paid manual labour.

2.29 Agricultural labour: A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:

- (i) farming,
- (ii) dairy farming,
- (iii) production of any horticultural commodity,
- (iv) raising of livestock, bees or poultry,
- (v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce. Further, 'carriage for transportation' referred *only to the first stage of the transport* from farm to the first place of disposal.

Working in fisheries was *excluded* from agricultural labour.

2.30 Wage and salary earnings: Information on wage and salary earnings was collected separately for each of the wage/salaried work recorded for a person in a day. Here, earnings refer to the wage/salary income (and not total earnings taking into consideration of all other activities done) received/receivable for the wage/salaried work done during the reference week by a wage/salaried employee and casual labourer. The wage/ salary received or receivable may be in cash or kind or partly in cash and partly in kind. While recording the earnings following conventions were followed.

- i) The wages in kind were evaluated at the current retail price.
- ii) Bonus and perquisites such as free accommodation, reimbursement of expenditure for medical treatment, free telephones, etc. evaluated at the cost of the employer or at retail prices and duly apportioned for the reference week were also included in earnings.
- iii) Amount receivable as 'over-time' for the additional work done beyond normal working time was excluded.

It may be noted that in the survey, at most two activities could be recorded for a person in a day. Therefore, it is possible that a person might have carried out two or more wage/salaried activities in a day, but only one activity or two activities at the most, depending upon the time spent on those activities, was recorded. In that case, the wage/salary income only from that activity(s) was collected and recorded separately, and not the total income of the person from all the activities done for the entire day.

2.31 Procedure followed for collecting employment and unemployment particulars in different NSS rounds: In the annual rounds from 45th (July 1989-June 1990) to 59th (January to December 2003), only activity status and industry of work according to usual principal status, subsidiary status and current weekly status approach were collected through a few columns of the demographic block of the Consumer Expenditure Schedule (Schedule 1.0). Particulars of employment and unemployment according to the usual principal status and usual subsidiary status were collected in the annual rounds by following a similar approach as in the quinquennial rounds. In the quinquennial rounds, particulars of current daily status of the household members are collected and current weekly status is derived from them, whereas in the annual rounds, current weekly status has been obtained through a direct query. In the 60th round, a separate schedule on employment and unemployment was canvassed for the first time in an annual round and particulars on employment and unemployment was collected in the same manner as that of the quinquennial rounds. In the NSS 62nd round also a separate schedule, similar to the one canvassed during NSS 60th round, on employment and unemployment was canvassed and in this round also particulars on employment and unemployment was collected in the same manner as that of the quinquennial rounds.

Chapter Three

Summary of Findings

3.0. Introduction

3.0.1 As stated earlier in Chapter One, NSS 62nd round was conducted during July 2005 to June 2006 (hereafter referred to as 2005-06). The detailed tables obtained from the survey are presented in the Appendix A of this report. This chapter presents the main findings of the survey with and discussion. The chapter is organized into five sections. To study the employment-unemployment situation, it is necessary to have as a perspective, the socio-economic structure of the households and the demographic pattern of the population of the country during the survey period. Therefore, information on socio-economic condition of sample households and demographic data pertaining to the surveyed individuals were also collected in this survey. In section one, the main findings relating the demographic and social characteristics of the households and population are presented. The second section highlights the estimates of employment indicators, classified by various correlates such as sex, age group, monthly per capita expenditure class, educational level, etc. This section also discusses the wage received by the employees, for work during the reference week. The discussion of unemployment rate for different age groups of the population, educational level of the persons, etc. appears in section three and that for the extent of underemployment in section four. The results relating to the participation of household members in *public works* are discussed in section five.

3.0.2 In this chapter, the discussion is confined mainly to estimates at the all-India level only. However, the estimates of some important indicators are presented for separately all the States, group of Union Territories, and group of North-Eastern States, at the end of this chapter. A comparison with earlier survey results has also been provided for some of the variables.

3.0.3 *Use of estimated aggregates:* Compared to the census population or the projections thereof, the NSS estimates of population are, in general, on the lower side. This difference may arise due to the differences in methods and coverage adopted by the NSSO in comparison with the census operation. However, the ratios obtained from the survey are expected to be robust. This is why the estimates on employment- unemployment are usually presented as ratios. To estimate an absolute number in any category, it is advisable to apply the survey estimates of ratios to the census population or projections thereof, for that category. The estimates of aggregates given in the margin of the detailed tables in the appendix may be used only to combine the ratios but not for generating estimates of absolute numbers for a characteristic. It may also be noted that as the tables are generally presented as per thousand distribution, the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.

3.0.4 *Reference period of the estimates:* The estimates presented in the report, in general, refer to the mid point of the survey period (July 2005 – June 2006) of NSS 62nd round, i.e., 01.01.06. It may be noted that the estimates of aggregates given in the detailed tables help only to combine ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be

applied to the projected populations as on 01.01.2006, the mid-point of the 62nd round survey period (July 2005 to June 2006).

3.0.5 The estimates of some important indicators of employment and unemployment, as mentioned earlier, have been presented for all the States, group of U.Ts. and North-eastern States taken together. While using the estimates for the smaller States. for some category, it may be kept in mind that the sample sizes for them may not be adequate enough for getting separate estimates for each of them which are sufficiently reliable – at least for measuring change or inter-State comparisons.

3.1 Characteristics of Households and Population

3.1.1 Estimates of Households and Population

3.1.1.1 In Statement 1 estimates of number of households, total population, average household size and sex ratio are presented. As per the survey estimates, during 2005-06, about 976 million people resided in 209 million households in India. About 74 per cent of the households

Statement 1: Estimated number of households, number of persons, average household size and sex ratio during 2005-06

	all-India		
estimates	rural	urban	rural+urban
(1)	(2)	(3)	(4)
number of households (00)	1542887	544300	2087187
number of persons (00)	7401322	2356684	9758006
average household size (0.0)	4.8	4.3	4.7
sex ratio (females per 1000 males)	951	916	942

belonged to rural India and accounted for nearly 76 per cent of total population. The average household size and sex ratio (number of females per 1000 males) were 4.7 and 942 respectively. Sex ratio in rural areas (951) was higher as compared to that in urban areas (916). Average

household size in rural areas (4.8) was also higher as compared to that in urban areas (4.3).

Statement 2: Average household size and sex ratio (females per 1000 males) over the different NSS surveys

NSS survey periods	all-India rural		urban	
	average household size	sex- ratio	average household size	sex- ratio
(1)	(2)	(3)	(4)	(5)
2005-2006 (62 nd)	4.8	951	4.3	916
2004-2005 (61 st)	4.8	962	4.3	920
2004 (60 th)*	5.0	959	4.4	913
1999-2000 (55 th)	5.0	959	4.5	915
1993-94 (50 th)	4.9	944	4.4	905
1987-88 (43 rd)	5.1	948	4.7	912
1983 (38 th)	5.1	963	4.7	905
1977-78 (32 nd)	5.2	959	4.9	904

* refers to the period January to June 2004.

3.1.1.2 *Change over the years:* Statement 2 presents the average household size and sex ratio obtained from this round, 60th round and the last six quinquennial rounds which were conducted during 1977-78 to 2004-05. It is seen from this Statement that the sex-ratio has experienced a decline in both rural and urban areas in this survey as compared to 2004-05. The decline is more in rural areas. The sex ratio in rural areas between 1977-78 and 2005-06 declined marginally. On the other hand, the sex ratio in urban areas, seems to have improved slightly during this period. As

regards the average household size, the estimate has remained unchanged, in both rural and urban areas, during 2004-05 and 2005-06 at 4.8 and 4.3 respectively. In the previous years household size has experienced generally a declining trend in both rural and urban areas.

3.1.2 Household Type

3.1.2.1 Every sample household was, categorised into *household type*,—that indicates a major

Statement 3: Per 1000 distribution of households and persons by household type during 2005-06

source of income of earning members of the household during the 365 days preceding the date of survey. The distribution of households and the corresponding population by *household type* for all-India is given in Statement 3. The distribution of households and persons by household types for each State/ Group of U.Ts. and North-Eastern States are presented in Statement 3.1 and 3.2, respectively

3.1.2.2 Statement 3 reveals that during 2005-06, members of about 50 per cent of the rural households took recourse to *self-employment*. Members of these households constituted about 55 per cent of the rural population. Another 35 per cent of the rural population belonged to *rural labour* households and such households constituted about 38 per cent of all rural households. On the other hands, among urban households, *regular employment* was the mainstay of 42 per cent of households with 40 per cent of the urban population. Nearly 36 per cent of the urban households and 42 per cent of the urban population depended on *self-employment* as the source of income.

3.1.3 Monthly Per Capita Expenditure (MPCE)

3.1.3.1 Household income, or for that matter ‘level of living’, is closely related to ‘employment status’ of the household members. It would, therefore, be interesting to study the distribution of households and population by income level. As it has been found difficult to collect reliable income data, the NSSO collects data on consumption expenditure in its surveys. In the present survey on employment-unemployment, data on consumption expenditure were collected through a set of five questions (details given in Chapter Two), with the reference period of last 30 days, which were included in the block for ‘Household characteristics’ (Block 3) of the Schedule (Schedule 10). A short consumption expenditure schedule was preferred to a more detailed schedule 1.0 in order to avoid respondent fatigue. Based on such data, monthly per capita expenditure (MPCE) was worked out for each sample household, which is expected to serve as a reasonable proxy for per capita income. The distributions of households and the corresponding population by MPCE classes for all-India are presented in Statement 4. Similar distributions for the NSS 61st round (2004-05) are also included in this Statement, which was obtained through the short-schedule containing 36 items of consumption expenditure with a reference period 30 days for some items and last 365 days for others, on the pattern of the household consumer expenditure Schedule (Schedule 1.0) (*refer: Report no. 515: Employment and Unemployment Situation in India, 2004-05*). The distributons of households and persons in different MPCE classes and results for each State/Group of U.Ts. and North-Eastern States are presented in Statement 4.1 and 4.2, respectively.

3.1.3.2 The class limits for the MPCE classes given in the statement and appendix tables of this report are based on the data collected in detailed Schedule 1.0 (Household Consumer Expenditure) of NSS 61st round. The class limits of MPCE classes were determined, separately for the rural and urban areas of all-India, in such a manner that each of the first two and last two classes contained 5% of the population and each of the remaining classes contained 10% each. A comparison of the size distributions for the 62nd and the 61st rounds are subject to three cautionary qualifications. One, MPCE in the 62nd round has not been adjusted for the changes in prices between the two rounds. Two, a short 5 question schedule of consumer expenditure used in the 62nd round is known to understate the estimate of MPCE that would result from a detailed schedule 1.0 used in the 61st round. Three, there are also some

differences in the reference periods used in the two rounds.

3.1.3.3 As seen from Statement 4, during 2005-06, in rural India, about 77 per cent of the households – which accounted for 82 per cent of the population - could spend up to Rs. 690 per month per person. However, in urban India, about 76 per cent of the households – which accounted for nearly 81 per cent of the population - spent less than Rs. 1380 per month per person. During this period, about 18 per cent of the rural population was spending Rs. 690 per month per person or more whereas the same per cent of the urban population was spending Rs. 1380 or more.

3.1.4 Age Distribution of Population

3.1.4.1 Age and sex distribution of the population are two important demographic characteristics that help improve the understanding of the results on employment-unemployment. In Statement 5, the distribution of rural and urban population by 5-year age-

groups is presented for males and females separately. This Statement also contains the same distribution estimated from the NSS 61st round (2004-05). The corresponding distributions for each State/Group of U.Ts. and North-Eastern States are presented in Statement 5.1.

3.1.4.2 The rural-urban differences in the age-distribution of population are clearly evident from Statement 5. About 35 per cent of males and 34 per cent of females in rural areas belonged to the age-group 0-14 years compared to nearly 29 per cent males and 28 per cent females in the urban areas. The working age population (15-59 years) comprised of about 58 per cent, both males and females, in rural areas and about 65 per cent, both males and females, in urban areas. The percentage of elderly women, that is, women of age 60 years and above, tends to be higher than that of the elderly men, particularly in urban areas. Except for marginal

reduction in the percentage of population in the age group 0-4 years in rural areas, age distribution in the NSS 62nd round is more or less similar to that in NSS 61st round.

3.1.5 Possession of Ration Cards

3.1.5.1 Government has launched a number of schemes to provide essential commodities at subsidized prices for selected segments of the population. To avail these concessions, different types of ration cards have been devised. On the request of the Planning Commission, information about the type of ration cards possessed by the household was collected in the employment and unemployment surveys of NSSO for the first time. The types of cards considered were Antyodaya, Below Poverty Line (BPL), Above Poverty Line (APL) and others. The BPL ration card is issued to families living below the poverty line. The Antyodaya ration card is meant for the ultra-poor and is issued to a family if it is considered to be sufficiently below the poverty line. The APL (Above Poverty Line) ration card is issued to families which are above the poverty line. Sometimes, households may possess a particular type of ration card, if the household members are employed in the police/BSF/military. Such ration cards were categorized against the type 'others'. As the need for a specific type of ration card is strongly related to the monthly per capita expenditure (MPCE) of the households,

Statement 6 presents the distribution of the households by the type of ration cards possessed according to the MPCE.

Statement 6: Number of household possessing ration card per 1000 households and per 1000 distribution of households by type of ration card possessed during 2005-06

2540 & above	595	0	27	813	159	1000
all classes	680	13	199	643	145	1000

3.1.5.2 It may be seen from Statement 6 that in rural areas about 79 per cent of the households possessed some kind of ration card whereas this percentage was lower at 68 in urban areas. In rural areas, BPL (39 per cent) and APL (41 per cent) ration cards were predominantly used whereas in the urban areas use of APL card was substantially higher (64 per cent) as compared to BPL (20 per cent). Share of Antyodaya cards was only 5 per cent in rural areas and 1 per cent in urban areas. The proportion of households reporting Antyodaya and BPL ration cards tended to go down with MPCE but not absent in the top MPCE classes. Among all the MPCE classes, the proportion of households possessing a ration card was found to be the lowest in the case of households belonging to the top MPCE class, in both rural and urban areas: 73 per cent of the households belonging to the top MPCE class in the rural areas possessed ration card, while 60 per cent of the households in the top MPCE class in urban areas possessed ration card.

3.1.6 Educational Status of Population

3.1.6.1 *Literacy rate*: Literacy, together with educational attainment, determines the quality of population and is highly related to employment potential. For the purposes of this survey, a person who could read and write a simple message in any language, with understanding, was considered a *literate*. Literates were further classified according to their levels of educational attainment. Thus, it is important to study the distribution of population by educational attainment (level) before a comprehensive discussion is attempted on employment-unemployment in the subsequent sections of this chapter.

Statement 7: Literacy rate* (per 1000 persons) by sex and for rural and urban India during 1983 to 2005-06

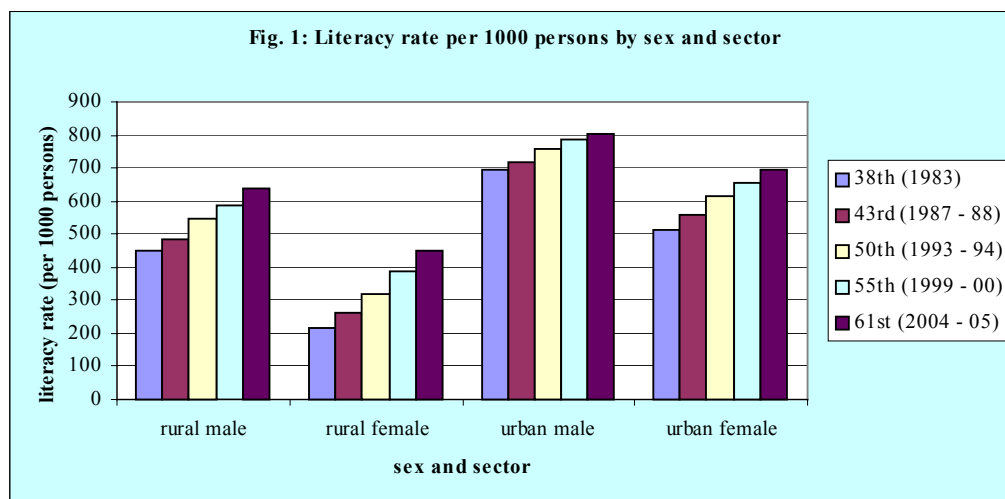

round (year)	rural		all-India urban	
	male	female	male	female

38 th (1983)	449	219	693	515

*: for persons of all ages (0 years and above).

For the purposes of this survey, a person who could read and write a simple message in any language, with understanding, was considered a *literate*. Literates were further classified according to their levels of educational attainment. Thus, it is important to study the distribution of population by educational attainment (level) before a comprehensive discussion is attempted on employment-unemployment in the subsequent sections of this chapter.

3.1.6.2 In Statement 7, the literacy rate per 1000 population of all ages has been presented for both rural and urban areas. It may be seen from this Statement that literacy rate among males and females has been increasing over the years in both rural and urban areas. As compared to 2004-05,

the literacy rate increased by 2 percentage points for both males and females in rural areas and 1 percentage points in urban areas for both males and females. The literacy rates for persons of all ages for 2005-06 are presented in Statement 7.1 for each State/Group of U.Ts. and North-Eastern States. A comparison of the literacy rates over the years are also presented in Figure 1.

3.1.6.3 *Literacy rate for persons of age 7 years and above:* The information about the literacy status of the population is also collected in the Population Census conducted in the country decennially. The literacy rates in the Population census are presented for the

Statement 8: Literacy rate (per 1000 persons) among persons of age 7 years and above by sex and for rural and urban India during 2004-05 and 2005-06

category of persons	all-India

person	619	827	673

population of age 7 years and above. Therefore, to facilitate the comparison with the figures of Population Census, Statement 8 presents the literacy rate for the persons aged 7 years and above. The literacy rate in 2005-06 stood at 68 per cent as compared to 67 per cent during 2004-05. Substantial rural-urban and male-female differentials were observed in the literacy rate during both 2004-05 and 2005-06. During 2005-06, literacy rates for males was 74 per cent as compared to only 52 per cent for females in the rural areas. Overall literacy rate increased by 1 percentage points in 2005-06 as compared to 2004-05. The increase was 2 percentage points in rural areas as compared to virtually no increase in urban areas. The literacy rates for persons of age 7 years and above for each State/Group of U.Ts. and North-Eastern States are presented in Statement 8.1.

3.1.6.4 *Educational level:* The distribution of males and females of age 15 years and above by successfully completed general educational level as estimated from the present survey on employment and unemployment is presented separately for rural and urban India in Statement 9 and the corresponding results for each State/Group of U.Ts. and North-Eastern States are presented in Statement 9.1. Figures presented in this Statement reveal that about 23 per cent of the literate were having education only *upto primary level* – 24 per cent in rural areas and 19 per cent in urban areas. Only 16 per cent of the rural population was having education of '*secondary and above*' level (for discussion in this report, they will henceforth be referred to

as *educated* persons) as compared to 42 per cent in urban areas. The proportion of *educated* persons is found to be highest among the urban males –about 48 per cent – followed by urban females (36 per cent) and rural males (22 per cent). In the '*literate but up to primary*' category, the proportion was highest among the rural males – the proportion being about 28 per cent. In this category, the next in order was the rural females with nearly 20 percentage points.

3.1.6.5 *Status of current attendance*: Interest in receiving education is reflected in the level of current educational attendance of the persons in the age-group 5-29 years. In Statement 10, per 1000 distribution of the persons of age 5-29 years in different statuses of current attendance has been presented and the corresponding results for each State/ Group of U.Ts. and North-Eastern States appear in Statement 10.1. It may be seen that even in 2005-06, about 16 per cent population in this age group never attended any education institution – 19 per cent in rural areas and 9 per cent in urban areas. About 50 per cent of this age group was currently attending educational institution – 49 per cent in rural areas and 53 per cent in urban areas. The gender differential in current attendance was less in urban areas as compared to rural areas – 53 per cent for males and 45 per cent for females in rural areas as compared to 55 per cent for males and 51 per cent for females in urban areas. About 38 per cent in the urban areas and 32 per cent in the rural areas either discontinued or dropped from their studies. There was no gender differential in this variable in urban areas and the gender differential was found only to be marginal in rural areas.

Statement 10: Per 1000 distribution of persons of age 5-29 years by status of current attendance during 2005-06

category of persons	status of current attendance				all-India	
	currently not attending				currently attending	all (incl. n.r.)

3.1.6.6 *Reasons for discontinuation/dropping out*: It is interesting to know the reasons for either never attending or discontinuing/dropping out from the education institution. This information has been presented for the persons in the age group 5-29 years in Statement 11. In Statement 11.1, for each State/Group of U.Ts. and North-Eastern States, the per 1000 distribution of person of age 5-29 year who are currently not attending educational institutions have been presented by reason. From Statement 11 it appears that lack of educational infrastructure is *not* a major reason for this phenomenon. *Education was not considered necessary* by 24 per cent of the population in 5-29 years who never attended any educational institutions. This was higher for females (27 per cent) as compared to males (18 per cent). Rural-urban differential was only marginal. The second predominant reason for never attending

was to *supplement the household income*, being 25 per cent for males and 6 per cent for females in both rural and urban areas. As regards, the discontinued or dropped out cases, *supplementing the household income* was the predominant reason in both rural (43 per cent) and urban (44 per cent) areas. The next in importance particularly for females, was to *attend to domestic duties* (41 per cent in rural areas and 46 per cent in urban areas) and *education not considered necessary* (16 per cent in rural areas and 12 per cent in urban areas).

Statement 11: Per 1000 distribution of persons of age 5-29 years who are currently not attending any educational institution by broad reason for non-attendance during 2005-06
all-India

3.1.6.7 *Type of educational institution being attended:* For persons in the age group 5-29 who were currently attending any educational institutions, information about the type of educational institution being attended was also collected. Information on this aspect has been presented in Statement 12 and the corresponding results for each State/ Group of U.Ts. and North-Eastern States appear in Statement 12.1. It may be seen from this Statement that 63 per cent availed of the Government educational institutions -- about 70 per cent in rural areas and 40 per cent in urban areas. Private unaided educational institutions along with private aided institution covered about 56 per cent of such persons in the urban areas. Share of females as compared to males is marginally higher in Government educational institution and marginally lower in private aided and unaided educational institutions. Percentage distribution of

currently attending persons aged 5-29 years according to type of educational institution in rural and urban areas is presented in Figure 2 and 3, respectively.

Statement 12: Per 1000 distribution of persons in the age group 5-29 years who are currently attending educational institution by type of institution during 2005-06

3.1.6.8 Level of technical education: With the onset of liberalization, job opportunities have expanded. However, to avail these opportunities, specified types of technical skills are also required. In this survey, the degree in professional courses like engineering, medicine, agriculture, etc., a diploma or certificates in agriculture, engineering/technology, medicine,

crafts, etc., was included under technical education. The distribution of persons of age 15 years and above by level of attainment of technical education is given in Statement 13 at the all-India level. A distinction has also been made between the technical courses providing diploma/certificate according to their attainment before and after attaining graduation level and presented in Statement 13. This Statement reveals that only 1 per cent of the persons of age group 15 years and above in the rural areas and 5 per cent in urban areas have some technical education. In both rural and urban areas, most of the persons having technical education were having diplomas/certificates of either below graduation level or graduation and above level. Only about 1 per cent of urban males attained degrees in technical education. The share of females having technical education was lower as compared to males in both rural and urban areas.

3.1.6.9 *Status of vocational training* : In the 60th round survey, for the first time in NSS, information on *formal* vocational training, with a minimum duration of 12 weeks or more, was collected for persons of age 15-29 years having educational level 'middle school and above but

Statement 13: Per 1000 distribution of persons of age 15 years and above by level of technical education during 2005-06

below graduate' and for 'graduate in vocational training'. In the 61st round survey, particulars of *formal or non-formal* vocational training received/ being received by persons in the age group 15-29 years were collected. In the present round, as in NSS 61st round, for persons of age 15-29 years, information in respect of non-formal vocational training received and formal vocational training received or being received as on the date of survey was collected. For the purpose of this survey, a vocational training was broadly defined as a training that prepared an individual for a *specific* vocation or occupation. The main objective of vocational training is to prepare persons, especially the youth, for the working life and make them employable for a broad range of occupations in various industries and other economic sectors. It aims at imparting training to persons in very specific fields through providing significant 'hands on' experience in acquiring necessary skill, which make them employable or create opportunities of self-employment.

3.1.6.10 *Non-formal vocational training*: Two sources of non-formal vocational training were distinguished -- expertise in an ancestral vocation or trade or occupation acquired through

‘hereditary’ sources and expertise acquired through ‘other’ sources, that is, any other ‘non-formal’ vocational training received through some sources other than from household members to pursue a vocation that might either be hereditary or other profession.

3.1.6.11 *Formal vocational training*: Any training imparted in institutions which followed a structured training programme and led to recognized certificates, diplomas or degrees was treated as *formal* vocational training.

3.1.6.12 It may be noted from Statement 14 that only 7 per cent of the rural persons in the age group 15-29 years have received vocational (formal and informal) training and for the urban areas, only 9 per cent of the persons in that age group received vocational (formal and informal) training. Among those who have already received vocational training, non-formal (hereditary and others) vocational training constituted the major share – 6 per cent in rural and 5 per cent in urban areas. The proportion of persons who received vocational training (formal and non-formal) was lower for females as compared to males in both rural and urban areas. It is also observed that among persons in the age group 15-29 years, nearly 1 per cent in the rural areas and 2 per cent in the urban areas were receiving formal vocational training during 2005-06.

3.2 Labour Force and Employed Population

3.2.1 *Labour-force*: Labour-force, refers to the population which supplies or offers to supply labour for production and, therefore, includes both ‘employed’ and ‘unemployed’ persons/person days. Labour-force participation rate (LFPR) is defined as the number of persons/person days including those *not* in labour force in the labour-force per 1000 persons. Similarly, the number of persons/person-days employed per 1000 persons/person-days is referred to as work-force participation rates (WFPR) or worker-population ratio (WPR). For measuring LFPR or WFPR, all the three approaches, viz. usual status, current weekly status and current daily status, were adopted for collection of data in the survey.

3.2.1.1 The survey has, therefore, generated three different estimates of LFPR and WPR based on the three approaches used in classification of the activity statuses of the person surveyed. These are:

- i) number of persons in labour-force -- i.e. employed or unemployed-- according to usual principal status (ps) and according to both the principal and subsidiary statuses (ps & ss),
- ii) number of persons in labour-force – i.e. employed or unemployed -- on an average in a week, and
- iii) number of person-days in labour-force – i.e. employed or unemployed --per day on an average during the reference period of 7 days preceding the date of survey.

3.2.1.2 In this section, the estimate of the labour-force, particularly the work force (or employed) and their structure are discussed. In order to study the trend, earlier survey estimates, in some cases, have been also provided.

Statement 15: WPR (number of persons/ person-days worked per 1000 persons/ person-days), PU (number of persons unemployed/ person-days unemployed per 1000 persons/ person-days) and LFPR (number of persons/ person-days in the labour force per 1000 persons /person-days) according to usual status (ps), usual status (ps+ss), current weekly status (cws) and current daily status (cds)

cds	497	182	344	44	16	30	541	198	375

3.2.2 Labour-force Participation Rate (LFPR)

3.2.2.1 In Statement 15, estimates of WPR (number of persons/ person-days worked per 1000 persons/ person-days), PU (number of persons unemployed/ person-days unemployed per 1000 persons/ person-days) and LFPR (number of persons/ person-days in the labour force per 1000 persons /person-days) according to usual status (ps) , usual status (ps+ss), current weekly status (cws) and current daily status (cds) are presented. Per 1000 distribution of persons by broad usual principal activity status, usual status (ps+ss), cws and cds for each State, group of U.Ts. and group of North-Eastern States are presented in Statement 15.1, Statement 15.2, Statement 15.3 and Statement 15.4, respectively.

3.2.2.2 *Usual status approach*: It is seen that during the period 2005-06, the usual status (ps+ss) LFPRs for persons in the rural areas was about 44 per cent - about 7 percentage points higher than that in the urban areas. The male-female differences in the estimates of LFPRs were quite significant. While the corresponding proportions for males were quite close to each other – 56 and 57 per cent for rural and urban areas respectively - the proportions for the rural and urban females were substantially lower – 31 and 15 per cent, respectively.

3.2.2.3 *Current status approach*: Compared to estimates of LFPRs based on the current weekly or daily statuses, the usual status (ps+ss) LFPRs were marginally higher in both the sectors and more so for rural females. This could be due to the fact that some of the usually employed withdrew from labour force when there was no work during week/day rather than reporting themselves as unemployed. The difference is found to be greater for females in the rural areas where the seasonality in work is known to be predominant.

3.2.2.4 *Sex-ratio of labour force*: The sex ratio among persons in the labour force (i.e., number of females in the labour force per 1000 males in labour force), according to usual principal status, obtained from detailed Table 10 given in the Appendix A, reveals that females were outnumbered by males in labour force – to a greater extent in urban areas (214) than in rural areas (396). However, when the usual (ps+ss) status ‘all workers’ approach is followed, females were relatively more frequent in the labour force. This was more so in rural areas (533) than in urban areas (246) as obtained from appendix Table 11. This reflects that the feature of females being engaged mostly in subsidiary economic activities was more frequently observed in rural areas than in urban areas.

3.2.3 Usually employed Population

3.2.3.1 Of the three estimates obtained on the basis of three approaches mentioned above, the first one gives the magnitude of the ‘usually employed’ or the ‘usual status work-force’. In Statement 15, estimates have been presented for two categories viz. (a) ‘usually employed’ or ‘working’ in the principal status (ps workers) and (b) ‘usually employed’ or ‘working’ in the principal and subsidiary statuses taken together (ps+ss workers). The second category constitutes the total usually employed (or ‘all’ workers). The first category pertains to those with more or less stable employment.

3.2.3.2 Statement 15 presents the WPRs based on three approaches obtained from the present survey. It is seen from this Statement that during 2005-06, WPR was about 43 per cent in the rural areas and 35 in the urban areas, according to the usual status (ps+ss), i.e., by considering principal and subsidiary statuses together. For males, the worker population ratios were 55 per cent in the

rural areas and 54 per cent in the urban areas, which were much higher than those for the females. Among females, only 31 per cent in the rural areas and 14 per cent in the urban areas were found to be working according to the usual status (ps+ss). A further comparison of WPRs according to usual (ps) and usual (ps+ss) gives an idea about the dimension of subsidiary status workers among 'all' workers i.e. workers according to usual (ps+ss). Difference of WPRs according to usual (ps+ss) and usual (ps) gives the dimension of workers who worked in the subsidiary capacity only. It is noteworthy that among 'all' male workers in both the rural and urban areas, about 1 per cent had worked solely in the subsidiary capacity. This proportion increased substantially in the case of 'all' female workers. About 9 per cent of them, in the rural areas, had worked in the subsidiary capacity only and the proportion turned out to be 2 per cent for urban 'all' female workers. Having surplus labour force in the country, the fact reveals, to some extent, the availability of occasional employment during the period of survey.

3.2.4 Estimates of Employed According to Current Status

3.2.4.1 The *usual status* approach adopted for classification of the population is unable to capture changes in the activity pattern caused by seasonal fluctuations. But the estimates obtained by adopting the current weekly and current daily status approaches are expected to reflect the overall effect caused by intermittent changes in the activity pattern during the year. The latter reflects even the changes that take place during a week. The estimates of the *employed* based on *current weekly status* give the average weekly picture while those based on *current daily status* give the average daily picture of employment. The difference between the two rates indicates the *underemployment* of those who had some employment in the week. Statement 15 gives the relevant estimates of the *employed* according to *current weekly status* and *current daily status* for all-India based on the survey.

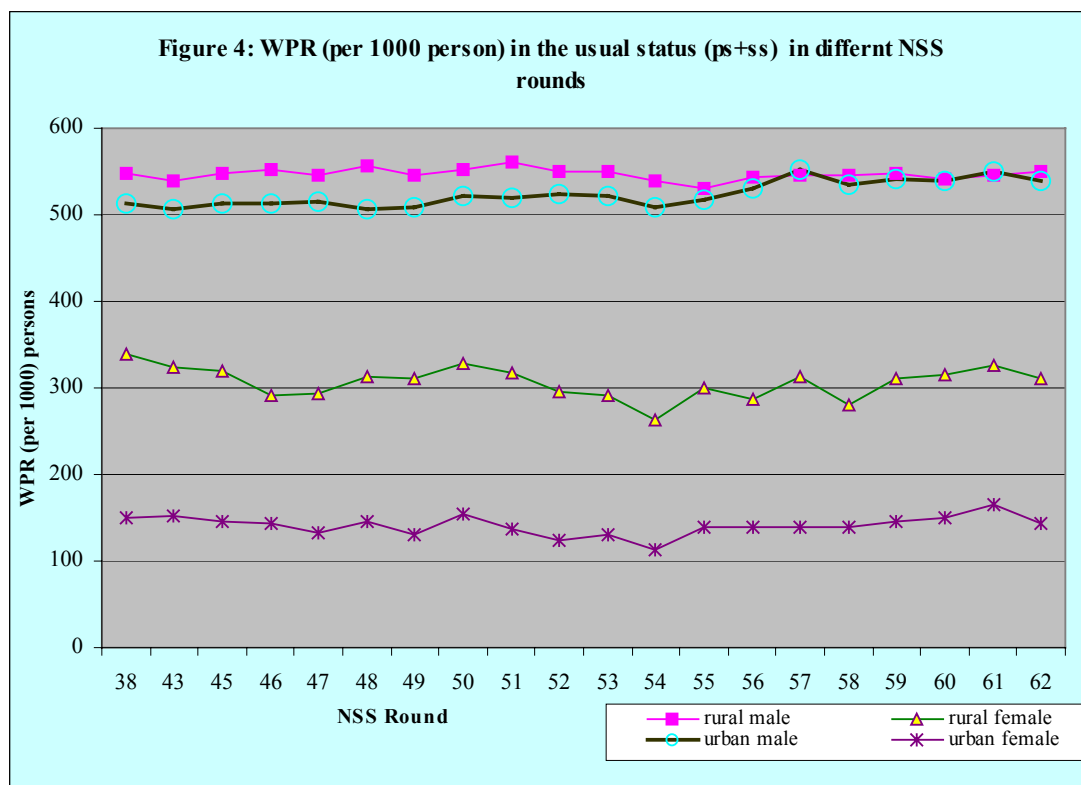

3.2.4.2 The difference between the WPRs according to usual status (ps+ss) and current weekly status approach is found to be 4 percentage points and about 1 percentage point in rural and urban areas, respectively. The difference for males was 3 percentage points in rural areas and 1 percentage point in urban areas. In case of females, this difference in rural and urban areas was 5 and 1 percentage points respectively. This shows the higher incidence of underemployment among the usually employed rural females. In the current daily status approach, the WPR for rural areas was 35 per cent, which was 4 percentage points lower than the rate obtained in the current weekly status approach. In the case of urban areas, the difference in the estimate of WPR obtained through these two approaches narrowed further – it was 32 per cent in the current daily status approach and 34 per cent in the current weekly status approach. It may be noted that WPR for rural females according to usual (ps+ss) was 31 per cent and that according to current daily status was 20 per cent showing a difference of nearly 11 percentage points.

3.2.5 Changes in WPR over NSS Rounds

3.2.5.1 Statement 16 presents the WPRs obtained from the present survey as well as those from the previous surveys. It may be noted that certain procedural changes were made in the classification of 'employed', 'unemployed' and 'persons out of labour force' in course of the earlier rounds. Prior to NSS 50th round survey (1993-94), a trichotomous classification, based on major time criterion, was adopted in classifying the population into the broad groups: 'employed', 'unemployed' and 'persons out of labour force'. According to the trichotomous classification, persons were directly classified into any of the three categories viz. 'employed' or 'unemployed' or 'out of labour force' based on major time criterion. In the later rounds of surveys, a two-stage dichotomous classification was adopted. In the first stage, a person was considered either belonging to the 'labour force' or 'out of labour force' based on major time criterion and then, in

the second stage, the 'persons in the labour force' were classified into 'employed' and 'unemployed' again based on major time criterion. However, in both the approaches, the count of 'employed', 'unemployed' and 'persons out of labour force' are expected to be broadly comparable according to the principal and subsidiary statuses taken together.

3.2.5.2 The comparison of WPRs over a short period shows that, compared to the year 2004-05, the WPRs, according to the principal and subsidiary statuses taken together, during 2005-06 for males did not change in rural areas but decreased by 1 percentage point in urban areas. However, for females there was a decline of 2 percentage points in rural areas and 3 percentage points in urban areas during the same period. As regards the WPR on current weekly status, no change was observed in rural areas but a decrease of 1 percentage points in urban areas was observed for males during this period. For females, the decrease observed was 2 percentage points in both rural and urban areas. The behavior of WPRs over a long period since 1983 shows irregular movements within a range of 3 to 4 percentage points. The change in the WPR according to current daily status approach is more or less similar to that of current weekly status. The change in the WPR (per 1000 persons) as per usual status (ps+ss) during the period 1983 to 2005-06 has been shown in the Figure 4.

Statement 16: WPR (number of persons/ person-days worked per 1000 persons/ person-days) according to 'usual status', 'current weekly status' and 'current daily status' approaches for different rounds

3.2.6 Age Specific Usual Status Worker Population Ratio (ASWPR)

3.2.6.1 The number of persons employed in a particular age-group per 1000 persons in that age-group is defined as the age specific worker population ratio (ASWPR). Based on the age recorded, the ASWPRs are estimated from the 62nd round data for broad age groups for the principal status (ps) workers, 'all' workers, current weekly status workers and current daily status workers. The relevant results, separately for rural and urban areas, are presented for all-India in Statement 17. It is seen that for both males and females and in rural and urban areas, the ASWPR is found to be the highest in the age group 30-59 years followed by the ASWPR for the youth of 15-29 years. According to usual status (ps+ss), the ASWPR for males in the age group 30-59 years was 98 per cent and 95 per cent in the rural and urban areas, respectively. The corresponding proportions for females in the age group 30-59 years were 57 per cent and 24 per cent in the rural and urban areas, respectively. It is important to note that the incidence of child labour, in spite of a lot of campaign to abolish it in the country, is still significant, particularly in the rural areas. According to usual status, about 4 per cent of male and female children of age 5-14 years in the rural areas and 2 per cent of male and 1 per cent of female children in the urban areas were found to pursue some economic activities to earn their livelihood. Age Specific WPRs for the rural and urban areas for the usual status (ps+ss) workers have been presented graphically in Figure 5.

Statement 17: WPR (number of persons/ person-days worked per 1000 persons/ person-days) for different broad age-groups according to 'usual status', 'current weekly status' and 'current daily status' approaches all-India

3.2.7 Education Level Specific Usual Status WPR

3.2.7.1 Among persons of age 15 years and above, the number of persons who are usually employed in a particular education category per 1000 persons in that education category is defined as the education level specific worker population ratio. Such ratios have been worked out for all persons of age 15 years and above and for the youth, i.e., for persons of age 15-29 years. For working out such education specific worker population ratios, persons of age 15 years and above are classified into 8 categories viz., 'not literate', 'literate and up to primary', 'middle', 'secondary', 'higher secondary', 'diploma/certificate', 'graduate' and 'post graduate and above'. The relevant worker population ratios for rural and urban India for 'all' workers are shown in Statement 18.

3.2.7.2 For persons in the age group 15 years and above in rural and urban areas combined, the WPR was found to be highest for educational level 'postgraduate and above' and 'diploma/certificate' (69 per cent each), followed by those with educational level 'literate & upto primary' (67 per cent) and 'graduate' (63 per cent). For the purpose of the survey, those who obtained some diploma or certificate in any trade after completion of their 'middle school', or after completion of 'secondary' or 'higher secondary' level and the 'diploma/certificate' obtained by them in the trade was reported to be equivalent to the general educational level 'secondary' or 'higher secondary', were categorized as persons with 'diploma/certificate'. Among them, the WPR is observed to be higher than that for those with educational level 'secondary' or 'higher secondary'.

all	689	318	511	815	389	606	547	270	413

3.2.7.3 There were substantial gender differentials in the WPR for different levels of education in both the rural and urban areas. Nearly 72 per cent of the males with education level of 'secondary and above' were employed while only 22 per cent for females of ages 15 years and above were employed in the same educational category. In the rural areas, the WPR for females of age 15 years and above was highest for *illiterate* females whereas in the urban areas it was highest for females with education *post graduation and above*.

3.2.7.4 The WPRs among the *educated*¹ categories was lower among the persons of age 15-29 years as compared to those aged 15 years and above both for males and females in rural and urban areas combined. In the age group 15-29, WPR was highest among *illiterate*, in both rural and urban areas. Whereas it was highest among *illiterate* rural females in this age group, it was highest for urban females with education of *post graduate and above*.

3.2.8 Distribution of Usually Employed by Status of Employment

3.2.8.1 As stated earlier in Chapter Two, employed persons are categorised into three broad groups according to their status of employment. These broad groups are: (i) *self-employed*, (ii) *regular wage/salaried employees* and (iii) *casual labour*. Statement 19 presents per 1000 distribution of usually employed by these broad groups for both principal status (ps) workers and 'all' workers. The statement also gives the results on the corresponding distribution obtained from the earlier surveys. The discussion below, however, pertains to 'all'(ps+ss) workers.

3.2.8.2 During 2005-06, in rural India, more than half of the usually employed ('all' workers) were *self-employed* – 57 per cent among males and nearly 62 per cent among females. The corresponding figures in urban India were 42 and 44 respectively. Proportion of *regular employees* was relatively low among females as compared to males in both rural and urban India. On the other hand, proportion of *casual labourer* was about 1 percentage point higher among female workers than that among male workers, in both rural and urban areas.

3.2.8.3 *Change over rounds*: Among rural males, the proportion of *self-employed* had fallen from 61 per cent in 1983 to 57 per cent in 2005-06. On the other hand for females, the proportion remained at the level of 1983 (62 per cent) in 2005-06. Interestingly, there has been a corresponding increase in the proportion of male *casual labour* over this period – from 29 per cent in 1983 to 33 per cent in 2005-06 in rural areas and from 15 per cent to 16 per cent in urban areas. The proportion of regular wage/salaried males remained more or less same in rural areas but decreased by 2 percentage points in urban areas. The proportion of female casual labourers decreased by only 1 percentage point in rural areas during this period whereas it decreased by 11 percentage points in urban areas. Proportion of female regular wage/salaried employees in the urban areas witnessed a substantial increase of 14 percentage points during this period.

¹ Educated persons are defined, for the purpose of this report, as those with general educational level 'secondary and above'

* indicate quinquennial rounds

3.2.9 Industrial Distribution of Usually Employed

3.2.9.1 As in the earlier employment and unemployment surveys, for the 62nd round survey also, information relating to the sector (industry) of employment in which a person was working has been collected for the persons categorised as *employed*. In the case of *usually employed*, this information was collected for both the principal status (ps) as well as subsidiary status (ss) workers. Statement 20 shows the distribution of the *usually employed* by industry, separately for usual 'principal status' (ps) workers and for 'all' workers. The corresponding results for each State/ Group of U.Ts. and North-Eastern States have been presented in Statement 20.1. In present survey, the industry classification followed is NIC 2004. Similar results based on the earlier quinquennial surveys are also presented in the Statement. It may be mentioned that NIC 1998 was used for NSS 55th, NSS 60th, and NSS 61st round survey. Earlier to that, NIC 1970 was used in some rounds and NIC 1987 in some others. For example, in NSS 50th round NIC 1987 was used while in NSS 43rd and 38th rounds NIC 1970 was used. It may be noted that the changes in the activity classification across rounds at the broad sectoral level (i.e., primary, secondary and tertiary), based on the results of the earlier surveys on employment and unemployment, are minor and will not effect comparison of sectoral changes in the workforce over different rounds.

3.2.9.2 *Rural areas*: Statement 20 shows that, during 2005-06, in rural India, among 'all' *usually employed*, about 65 per cent of the males and 81 per cent of the females were engaged in the primary sector (excluding Mining and Quarrying). Compared to this, the proportion of males engaged in the primary sector (excluding Mining and Quarrying) was 78 per cent in 1983, 75 per cent in 1987-88 (NSS 43rd round), 74 per cent in 1993-94 (NSS 50th round), and 71 per cent in 1999-2000 (NSS 55th round). At those points of time, proportions of female workers engaged in agricultural activities were 88, 85, 86 and 85 per cent, respectively – showing an overall declining trend in the share of employment in the primary sector. Over these years, in rural India, there has been a corresponding gradual increase in the proportion of males engaged in 'secondary' sector – from 10 per cent in 1983 to 17 per cent in 2005-06 for males and 7 per cent to 12 per cent for females. The proportion has also increased in the 'tertiary' sector – from 12 per cent to 18 per cent among males and from 5 per cent to 7 per cent among females.

3.2.9.3 *Urban areas*: In urban India, the 'tertiary' sector engaged about 59 per cent of the male workers while the 'secondary' sector accounted for about 34 per cent of the usually employed males. For females, the corresponding proportions were lower at 52 and 33 per cent. Proportion of urban females employed in agricultural sector fell by about 16 percentage points since 1983, with a significant rise for other sectors.

Note 1: The broad groups of industries viz., primary, secondary and tertiary refer to the NIC-2004 industry divisions 01-05, 10-45 and 50-99, respectively.

2. Primary sector excluding 'Mining and Quarrying'. Mining and Quarrying is included in the estimates of secondary sector

3.2.10 Participation in Subsidiary Economic Activities Vs Principal Status

3.2.10.1 In the preceding sub-sections, all discussions on employment pertained to those who were economically active as per their principal or subsidiary usual activity status. In Statement 21, the proportion of persons who reported to have pursued some economic activity in the subsidiary capacity is given for each category of persons belonging to a principal activity status. This will provide the proportion of principal status workers with subsidiary work and of those who did not work according to the principal status but worked in the subsidiary capacity only.

3.2.10.2 It is seen from Statement 21 that, during 2005-06, about 13 per cent of persons – 16 per cent in rural and 3 per cent in urban areas reported to be pursuing subsidiary economic activity. The proportion was quite similar for males (13 per cent) and females (12 per cent). Around 27- 28 per cent among the principal status workers, in the rural areas, reported to pursue some economic activity in the subsidiary capacity as well, as compared to only 4-5 per cent in urban areas. Compared to principal status workers, the proportion of persons who reported to have pursued economic activity in the subsidiary capacity was relatively lower among the unemployed in the rural areas, but higher in the urban areas. However, the proportion is found to be the lowest among persons who were out of labour force. It is most important to note that, unlike all other categories, the proportion among the females in the out of labour force category who reported to have pursued economic activity in the subsidiary capacity was higher than that among their male-counterparts in both rural and urban areas.

Statement 21: Number of persons reported subsidiary economic activity per 1000 persons of different broad usual principal activity status

3.2.11 Distribution of Usually Employed by MPCE Class

3.2.11.1 As stated earlier, ‘employment’ of the household members is highly related with household income and in turn, with the household monthly per capita expenditure – a close proxy for household income. Thus, the worker population ratio (WPR) has been given for each MPCE class in Statement 22 separately at the all-India level and WPR for each State/ Group of U.T.s and North-Eastern States is presented in Statement 22.1. It is evident from the Statement that a steady increase in WPR, particularly for males, is found to be associated with a steady increase in MPCE of households, in both rural and urban areas. On the other hand, for females, no clear pattern is discernable. Female WPR fluctuates between 28 to 33 per cent for rural and in a wider range between 11 and 22 per cent for urban areas.

Statement 22: Number of persons employed per 1000 persons (WPR) according to usual status (ps+ss) by MPCE class

3.2.12 Distribution of Usually Employed by Status of Employment and MPCE (Rs.)Class

3.2.12.1 To study the relation between status of employment and MPCE Classes. Statement 23 presents the distribution of usually employed (ps+ss) persons by status of employment for each MPCE Class. It may be seen from this Statement that share of casual labourers generally decreased with the increase in the MPCE class in both rural and urban areas and for both males and females. On the other hand, share of regular wage/salaried employees increased with the increase in MPCE for both rural and urban areas in case of males as well as females. There was no clear pattern for the self-employed.

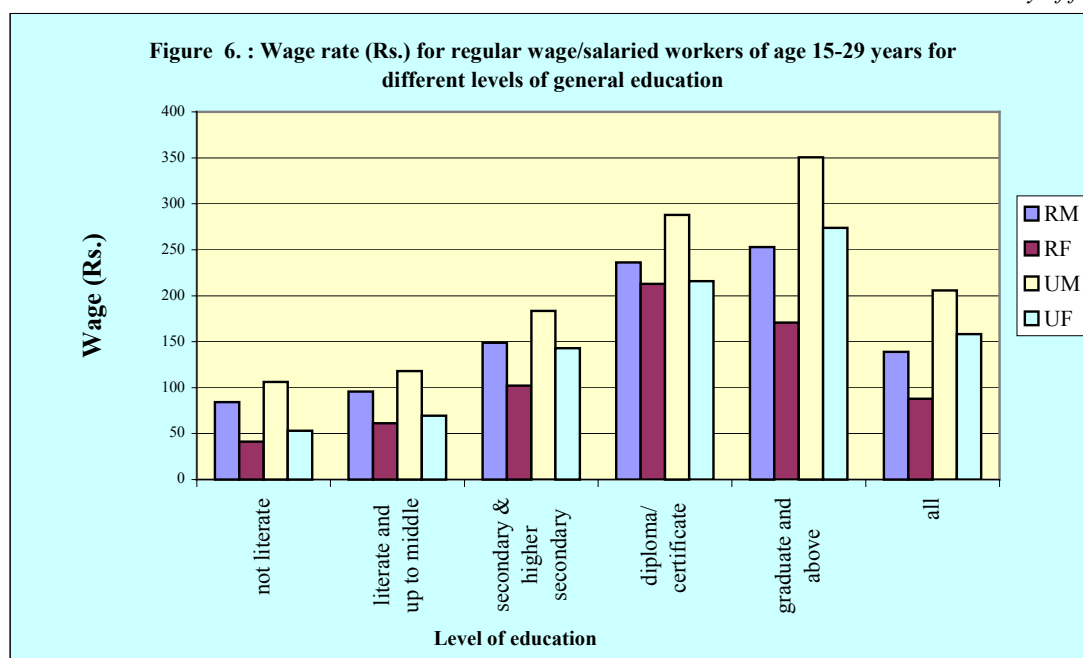

3.2.13 Daily Wage Rates of Regular wage/salaried Employees and Casual Labourers

3.2.13.1 Data on the average wage earnings per day received by casual labourers and regular wage/salaried persons during each of the seven days of the reference week were collected in this survey. It may be noted that regular wage/salaried earners, generally, receive bonus and perquisites such as free accommodation, reimbursement of expenditure for medical treatment, free telephones, etc. and those are evaluated at the cost to the employer or at retail prices and duly apportioned for the reference week and also included in their earnings. In contrast, casual labourers are not entitled to the additional benefits besides wage/salaried that are enjoyed by the regular wage/salary workers.

3.2.13.2 Statement 24 gives the average wage rates for regular wage/salaried employees. The corresponding rates for each State/Group of U.Ts. and North-Eastern States have presented, along with the sample person-days in Statement 24.1. Data indicate sharp disparities between the male-females and rural-urban areas. The average wage rate for regular wage/salaried employees, was Rs. 138.74 for males and Rs. 87.71 for females (rural) and Rs. 205.81 for the males and Rs. 158.23 for the females (urban) and thus, male-female salary differential was around Rs. 50 in both rural and urban areas. There was a clear tendency for the average wage/salary to go up with education with one exception (rural females with education graduate and above). These figures are presented diagrammatically in Figure 6.

Statement 24: Average wage/ salary earnings (Rs. 0.00) per day received by regular wage/ salaried employees (activity status codes: 31, 71, 72) of age 15-59 years for different broad general education level

general education level	all-India

North-Eastern States along with the corresponding sample person-days. As in the case of regular wage/salaried employees, the male-female and rural-urban disparities in wage rates were found to be prominent. In the rural sector, on an average, Rs. 59.29 was earned in a day by a male casual labourer whereas a female casual labourer earned Rs. 37.97 a day – showing a difference of about Rs. 20. In the urban sector, the wage difference between males and females was even sharper. The difference was of the order of Rs. 35. In fact, a male casual labourer in the urban areas earned Rs. 80.70 in a day and a female, Rs. 44.57 in a day.

The average wage rate for the casual labourers, in the urban areas was higher than that in the rural areas.

3.3 Unemployment

3.3.1 *Unemployment*: As in the case of employed, for unemployed also, three kinds of estimates are obtained following the three different approaches. These are:

- number of persons usually unemployed based on 'usual status' approach,
- number of persons unemployed on an average in a week, based on the current 'weekly status'(cws) approach, and
- number of person-days unemployed on an average during the reference period of seven days preceding the date of survey, based on the current 'daily status'(cds) approach.

3.3.1.1 Of these three, the first estimate indicates the numerical magnitude of the persons unemployed for a relatively long period during a reference period of 365 days – usual principal status or ups -- and approximates an indicator of chronically unemployment. However, some of the unemployed on the basis of this criterion might be working in a subsidiary capacity. One can, therefore, get another estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period. The former is called the usually unemployed according to the principal status (ps) and the latter, the usually unemployed excluding the subsidiary status workers or usual status -- us (adjusted), which would conceptually be lower than the former.

3.3.1.2 The second estimate is based on the current weekly status and gives the average weekly picture during the survey year. It includes both chronic unemployment and also seasonal unemployment of those categorised as usually employed caused by seasonal fluctuations in economic activity.

3.3.1.3 The third estimate based on the current daily status concept considers person-days and gives average level of unemployment on a day during the survey year. It captures three aspects of *unemployment*, viz.:

- (a) the unemployed days of the chronically unemployed,
- (b) the unemployed days of the usually employed who become seasonally unemployed during the reference week by priority criterion and
- (c) the (intra-week) unemployed days of those classified as employed according to the priority criterion of current weekly status approach.

Hence, this estimate may be considered as the most inclusive rate of *unemployment*.

3.3.2 Unemployment Rates

3.3.2.1 *Unemployment rate* is defined as the number of persons (person-days in the cds approach) unemployed per thousand persons (person-days in the cds approach) in the *labour force* (which includes both the employed and the unemployed). This, in effect, represents the unutilised portion of the labour force. Thus, it is a better indicator of the unemployment situation in a population than the *proportion unemployed*, which is defined as the number of the unemployed per thousand persons in the population as a whole. Notice that the proportion unemployed is identical to a ratio of unemployment rate divided by labour force participation rates. For discussions on the subject of unemployment, the *unemployment rates* are taken up first in this section.

3.3.2.2 Statement 26 presents the unemployment rates (UR) as obtained from the present survey according to the three approaches. The corresponding values of proportion unemployed (PU) in the population are also given in the Statement. The unemployment rates, derived according to usual principal status, usual (adj.), cws and cds for each State/Group of U.Ts. and North-Eastern States have been presented in Statement 26.1, Statement 26.2, Statement 26.3 and Statement 26.4 respectively. . Some of the important points emerging from this Statement are:

- (i) overall unemployment rates were not high for rural areas if the usual status approach is followed- it was around 2 per cent (for males nearly 3 per cent and for females nearly 2 per cent);
- (ii) urban rates were higher than the rural rates, except for the cds approach in which the unemployment rates for rural and urban areas were almost equal (nearly 8 per cent);
- (iii) unemployment rates for females were higher than the rates for males in the urban areas. In the rural areas, unemployment rates for females were lower than that for the males.

- (iv) unemployed person-day rates were substantially higher than the rates obtained on the basis of usual status approach or current weekly status approach, thereby indicating a high degree of seasonal and intra-seasonal unemployment. As per cds approach, the unemployment rates in both the rural and urban areas was nearly 8 per cent each, as compared to 2 per cent in the usual adjusted approach in the rural areas and 5 per cent in the urban areas. The corresponding rates in the cws approach were 4 per cent and 6 per cent, respectively.
- (v) The pattern observed in the proportion unemployed (PU), which is defined as the number of unemployed person (*person-days*) per 1000 of person (*person-days*), was similar to that observed in the unemployment rates, though the magnitude was almost one-half of the unemployment rate observed for males in the rural and urban areas. However, for females the PU was almost one-third in the rural areas and nearly one-tenth in the urban areas. The difference between PU and unemployment rates is explained by differences in labour force participation rates.

Statement 26: Unemployment rate and proportion unemployed according to usual status, current weekly status (cws) and current daily status (cds) approach during 2005-06

all-India									
status	rural			urban			rural+urban		
	male	female	person	male	female	person	male	female	person

3.3.2.3 *Change in unemployment rate*: Statement 27 presents unemployment rates obtained from surveys of NSSO conducted since 1993-94 (NSS 50th round). The Statement shows in a two-point comparison that compared to 1993-94, during 2005-06, *unemployment rates* in terms of the usual principal status or *us (adj.)*, increased by nearly 1 percentage point, except that for females in urban areas, where they remained virtually unchanged. In the urban areas, unemployment rate for males increased by 1 percentage point in all the approaches, except the usual status approach. However, for females, no significant change in these rates is noticeable, except a decline of nearly 1 percentage point as per cds approach. Compared to 2004-05 the unemployment rates, in the urban areas, increased for males in all the approaches, except as per cds approach and for females they decreased in all the approaches. In the rural areas, also, similar trend is observed in the unemployment rates during the same period – they increased for males and decreased for females.

Statement 27: Unemployment rates (number of persons (or person-days) unemployed per 1000 persons (or person-days) in the labour force) for different rounds

Note: Figures within brackets indicate the proportion of unemployed per 1000 persons (person-days).

3.3.3 Unemployment Rates for Different Levels of Education in Selected Age Groups

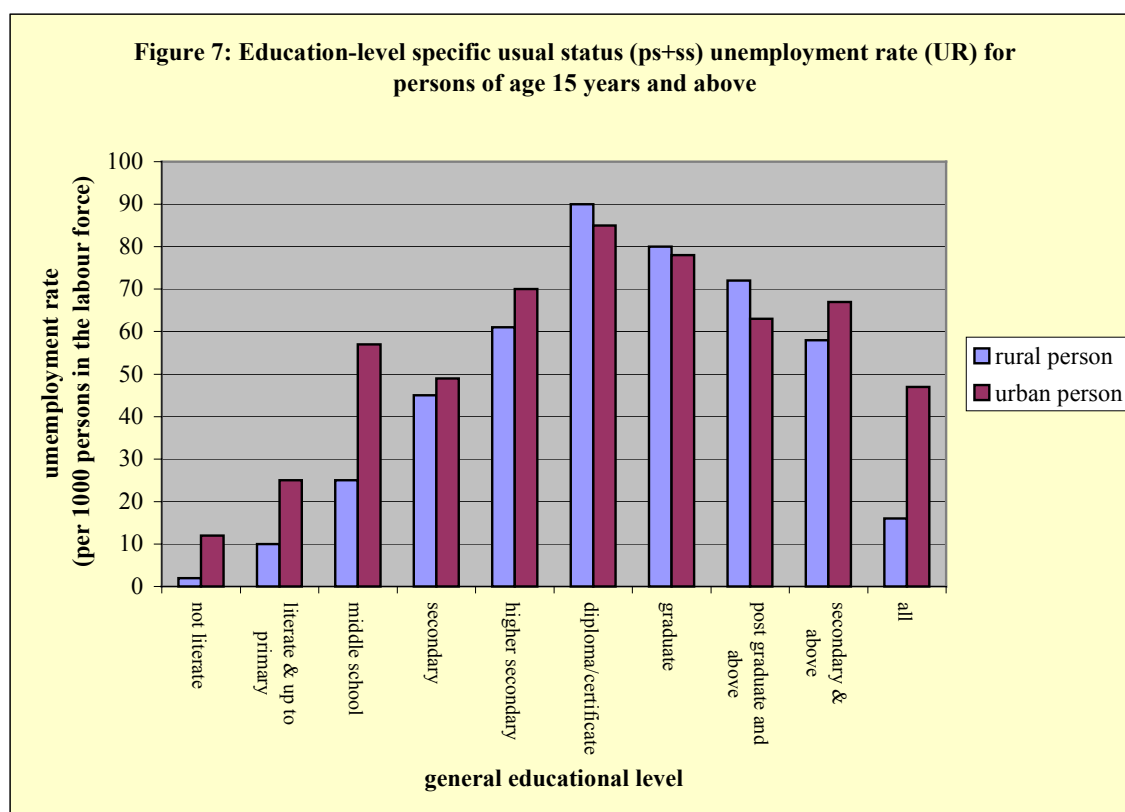

3.3.3.1 Unemployment rates for different levels of education in selected age groups obtained according to the usual status (ps+ss) approach have been considered for discussion here. For working out such education specific unemployment rates, the persons of age 15 - 29 years and 15 years and above have been classified into 8 categories viz., 'not literate', 'literate and up to primary', 'middle', 'secondary', 'higher secondary', 'diploma/certificate', "graduate" and "post graduate and above". The education-level specific usual status (ps+ss) unemployment rates for persons of different age groups have been presented in Statement 28.

Statement 28: Education-level specific usual status (ps+ss) unemployment rate (UR) for persons of age groups 15-29 and 15 years and above

education level	all-India								
	rural			urban			rural+urban		
	male	female	person	male	female	person	male	female	person

secondary & above	48	109	58	53	137	67	50	120	61
all	19	12	16	44	63	47	25	19	23

3.3.3.2 In both rural area urban areas, unemployment rates among person of age 15 – 29 years, generally showed a rise with increase in the level of education. As mentioned earlier, persons with educational level of *secondary and above*, have been considered as *educated* for the purpose of this report. Among the educated persons, in the age group 15 – 29 years, the unemployment rate in the rural and urban areas were 12 per cent and 16 per cent respectively much higher than those with educational level middle or below. The unemployment rates

among the educated females in this age group were found to be substantially higher than that for the educated males – for the rural areas the rate was nearly 16 per cent for females and 11 per cent for males and for the urban areas it was nearly 24 per cent for females and 14 per cent for males. As far as the age group 15 years and above is concerned, the unemployment rate for the educated persons in the rural areas, was just one-half of that for those in the age group 15 – 29 years but in the urban areas, it was slightly lower than one-half. As regards the gender differentials, the pattern was similar to that in the age group 15 – 29 years. Different education level specific unemployment rates for the persons in the age group 15 years and above have been presented in Figure 7.

3.4 Underemployment

3.4.1 Underemployment: Underemployment is commonly defined as the under-utilisation of labour time of the workers. For instance, some of the persons categorised as usually employed, do not have work throughout the year due to seasonality in work or otherwise and their labour time is not fully utilised - they are, therefore, underemployed. Their underemployment is termed as *visible* underemployment if they report themselves to be available for work with respect to a shorter reference period. The NSS approximates the *visible* underemployment by cross-classifying persons by (a) their usual and current weekly statuses (b) their usual and current daily statuses and (c) their current weekly and current daily statuses.

3.4.1.1 Some employed persons, particularly the *self-employed*, may appear to work throughout the year. But the work they are pursuing may not fully meet their needs in terms of generating sufficient income, giving a sense of fulfillment to them, etc. They may, therefore, want additional and/or alternative work. Such underemployment is termed as *invisible* underemployment and therefore, not directly measurable. The NSS calculates the indicators of *invisible* underemployment through a set of probing questions addressed to those categorised as

usually employed on their availability for additional/alternative work and reason for seeking such additional/alternative work, status of their present engagement (i.e., whether worked more or less regularly), etc. The set of probing questions to try to measure *invisible* underemployment are generally addressed in the quinquennial surveys of NSSO. In this round, being an annual survey on employment and unemployment situation, such information was not collected. Thus, the discussion in the following paragraphs of this section will deal with only the *visible* underemployment.

3.4.2 Underemployment among Usually Employed

3.4.2.1 As mentioned earlier, some persons categorised as usually employed might not have work throughout the year. They might remain without work during some weeks of the year or go without work on some days of the different weeks of the year. The first dimension is brought out by the distribution of the usually employed by their current weekly status. Statement 29 gives the relevant all-India results for persons employed according to usual status (ps+ss) during 2005- 06 and the corresponding results for each State/Group of U.Ts. and North-Eastern States have been presented in Statement 29.1.

Statement 29: Per 1000 distribution of usually employed (ps+ss) by their broad current weekly status

current weekly status	all-India								
	rural			urban			rural + urban		
	male	female	person	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
employed	953	820	906	978	920	967	959	833	919
unemployed	23	16	20	13	9	12	20	15	19
not in labour force	25	164	73	9	70	21	21	152	63
all	1000	1000	1000	1000	1000	1000	1000	1000	1000

3.4.2.2 It is seen from Statement 29 that the proportion of usually employed males who were found to be not employed during the week preceding the date of survey, i.e. the underemployment rate, was 5 per cent in the rural and 2 per cent in the urban areas. Compared to males, the problem of underemployment is more serious among the usually employed females, particularly in the rural areas. Among them, the underemployment rate was as high as 18 per cent in the rural and 8 per cent in the urban areas. Most of the usually employed females who were currently not working were reported to have withdrawn from the labour force and did not report themselves as currently unemployed.

Statement 30: Per 1000 distribution of person-days of usually employed (ps+ss) by their broad current daily status

current weekly status	all-India								
	rural			urban			rural + urban		
	male	female	person	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
employed	893	649	808	948	822	924	906	671	832
unemployed	60	41	54	34	26	33	54	39	49
not in labour force	47	309	138	18	152	44	40	289	119
all	1000	1000	1000	1000	1000	1000	1000	1000	1000

3.4.2.3 The activity pattern of the usually employed during different days within the reference week is indicated by the distribution of their days by current daily status. The relevant results for rural and urban India are presented in Statement 30 and the corresponding results for each State/Group of U.Ts. and North-Eastern States have been presented in Statement 30.1. It is observed that the proportion of person-days of the usually employed utilised for work was quite low for females compared to males. During 2005-06, this proportion was estimated at about 65 per cent and 82 per cent for females in rural and urban India, respectively as against 89 and 95 per cent for males in rural and urban India, respectively. Once again, it is observed that when work was not available, a large proportion of females withdrew from the labour force rather than report themselves as unemployed.

3.4.3 Underemployment of Persons Categorised as Working According to Current Weekly Status

3.4.3.1 As mentioned earlier, some persons classified as working during a week might not have had work for the entire week. The distribution of person-days for persons 'working' according to current weekly status, therefore, would indicate the proportion of person-days on which they had remained without work. These results are presented in Statement 31 for rural and urban areas of all-India, separately for males and females and the corresponding results for each State/Group of U.Ts. and North-Eastern States have been presented in Statement 31.1.

3.4.3.2 During 2005-06, the percentage of person-days on which persons with some work during the reference week (according to current weekly status) were without work was estimated at about 6 for rural males, 21 for rural females, 3 for urban males and 11 for urban females. However, both in rural and urban areas when there was no work, a higher proportion of females as compared to males withdrew from the labour force.

Statement 31: Per 1000 distribution of person-days of current weekly status employed persons by their broad current daily status

current daily status	all-India								
	rural			urban			rural + urban		
	male	female	person	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
employed	937	790	891	969	891	955	945	804	904
unemployed	39	31	37	22	19	22	35	29	33
not in labour force	23	179	73	9	91	24	20	167	62
all	1000	1000	1000	1000	1000	1000	1000	1000	1000

3.5 Participation in Public Works

3.5.1 *Public works*: On a request of the Planning Commission, information about the participation in *public works* by household members of age 15 years and above in the rural areas was collected for the first time, in this survey. For the purpose of this survey *public work* was defined as those activities which were sponsored by Government or Local Bodies, and which covered local area development works like construction of roads, dams, bunds, digging of ponds, etc., as relief measures, or as an outcome of employment generation schemes under the poverty alleviation programme such as Employment Guarantee Scheme (EGS), Sampoorna Grameen Rozgar Yojana (SGRY), National Food for Work Programme (NFFWP), etc. To distinguish between '*public works*' and works not classifiable as '*public works*', some broad characteristics of '*public work*' were identified, viz., the primary objective was generation of

wage employment and poverty alleviation, and creation of community asset as an outcome in achieving those main objectives. The coverage of schemes under '*public works*' was restricted to those schemes through which the Government generated wage employment under poverty alleviation programme, or relief measures. The types of works that are generally undertaken through these schemes, were watershed development, drought proofing, land leveling, flood control, laying pipes or cables, sanitation, water harvesting, irrigation canal, development of orchard, road construction, building construction / repair, running crèche, etc. However, some schemes of work even though resulting in employment generation but executed through contractors were kept outside the domain of '*public works*'.

3.5.1.1 Detailed information on *public works* collected in this survey from persons of age 15 years and above in the rural areas were about their status of getting work in *public works*, viz., 'got work', 'sought but did not get work', 'did not seek work'. Among those who got work in *public works*, information was collected about the number of days of employment during the last 365 days, amount of wages received (separately in cash and kind) for those days in which they got work in *public works*. Those who 'sought but did not get work in *public works*', information was collected regarding whether they made any complaint to any authority, whether received any compensation and if so, amount of compensation received.

3.5.1.2 To have a meaningful interpretation of the estimates of various parameters relating to the *public works*, it is necessary to have an idea about the sample sizes in respect of persons enumerated, i.e., the number of sample persons of age 15 years and above in the rural areas, separately for those who 'got public work', 'sought but did not get public work', and 'did not seek public work'. These sample numbers are presented in Statement 32. In the subsequent Statements, viz., in Statement 33 and Statement 34, the estimates based on these samples have been presented and the discussion has been confined to the estimates.

Statement 32: Number of sample persons* by status of getting work in *public works* during the last 365 days, number of sample persons made complaint and number of sample persons received compensation

rural				all-India	
category of persons	number of sample persons by status of getting work			all (incl. n.r.)	number of sample persons made complaint
	got work	sought but did not get work	did not seek work		
(1)	(2)	(3)	(4)	(5)	(6)
male	4843	4402	56360	65979	460
female	1663	2876	57503	62492	254
person	6506	7278	113862	128471	714

*: persons of age 15 years and above in the rural areas.

'work', irrespective of the duration of work done on that particular day. It may be seen from Statement 32 that among the surveyed persons of age 15 years and above in the rural areas, only 5 per cent got work, 6 per cent sought but did not get work and nearly 89 per cent did not even seek work in *public works*. Data (Table (27), Appendix A, Page A-242) shows that no sample person reported receipt of compensation, even though, from Statement 32 it is seen that 714 persons reported making complaint, either orally or in writing.

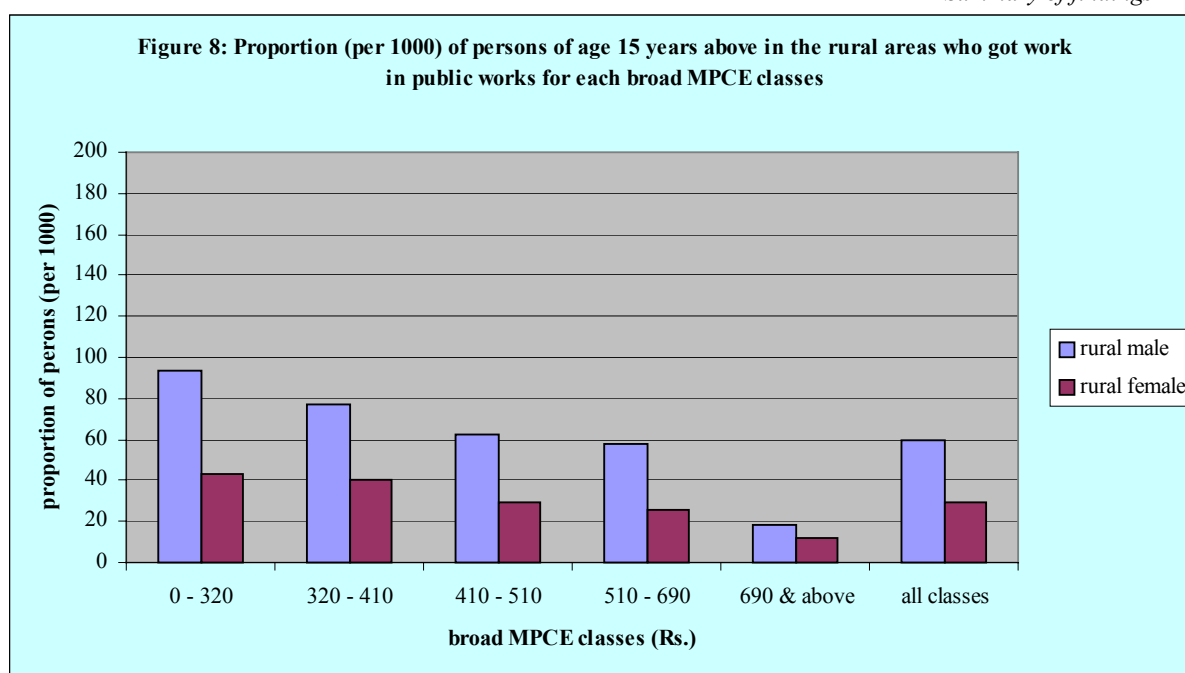

3.5.1.3 Statement 32 presents the number of sample persons of age 15 years and above in rural areas by their status of getting work in *public works*, number of sample persons who made complaint. While interpreting the number of persons who got work in *public works* it may be kept in view that a person was classified as got work in *public works* irrespective of the duration of work done by the member in a day. Therefore, if a person got work even for a day during the last 365 days then he/she was considered as 'got work in *public*

Statement 33: Per 1000 distribution of person of age 15 years and above by status of getting work in *public works* during the last 365 days for each broad household monthly per-capita consumer expenditure class rural all-India

broad household monthly per-capita consumer expenditure class (Rs.)	per 1000 distribution of person by status of getting work

3.5.2 Status of Getting Work in Public Works

3.5.2.1 Statement 33 presents the distribution of person of age 15 years and above who 'got work', 'sought but did not get work', and 'did not seek work' for five broad MPCE classes. The corresponding results for each State/Group of U.Ts. and North-Eastern States are presented in Statement 33.1. Statement 33 reveals that, the proportion of persons who got work in *public works* declined with the increase in the MPCE for both males and females. The proportion in the top MPCE class (Rs. 690 and above) for males was only about one-fifth of that in the bottom MPCE class (less than Rs. 320) – nearly 9 per cent in the bottom MPCE class and nearly 2 per cent in the top MPCE class. For females this ratio was about one-fourth – nearly 4 per cent in the bottom MPCE class and nearly 1 per cent in the top MPCE class. The proportion who 'sought but did not get work' was higher than the proportion who 'got work' in *public works* in all the MPCE classes for both males and females. As in the case of proportion of persons getting work in *public works*, the proportion of persons seeking but not getting work declined with the increase in MPCE. However, a reverse trend was observed in the proportion of persons who did not seek work in the *public works* with respect to MPCE. For the bottom MPCE class nearly 78 per cent of males did not seek work in *public works* and it increased to nearly 94 per cent for the top MPCE class. The corresponding percentages in the case of females were 86 per cent and 96 per cent respectively. The proportion (per 1000) of persons who got work in *public works* for different broad MPCE classes are presented in Figure 8.

3.5.3 Number of Days Worked and Average Wages Received

3.5.3.1 It would be of interest to study the average number of days in *public works* and average

Statement 34: Average number of days worked in public works during the last 365 days by person of age 15 years and above in the rural areas for each broad household monthly per-capita consumer expenditure class

rural broad household monthly per-capita consumer expenditure (Rs.) class	all-India		
	male	female	person
(1)	(2)	(3)	(4)
0 - 320	13	14	14
320 - 410	17	16	17
410 - 510	16	18	17
510 - 690	19	23	20
690 & above	24	20	22
all classes	17	18	17

amount of wages received per day for work in *public works*. In Statement 34, average number of days worked in public works by persons of age 15 years and above, in rural areas, is presented, separately for males and females, for each broad MPCE classes. It may be observed from this Statement that average number of days worked in *public works*, during the last 365 days, by males and females were almost same- 17 days for males and 18 days for females. The maximum number of days worked for males was in the top MPCE class (Rs. 690 and above) – 24 days during the last 365 days. For females it was in the MPCE class (Rs. 510 – Rs. 690) - 23 days during the last 365 days. Variation in the average number of days worked in other MPCE classes were marginal. It may be seen from Table (26) (Appendix A, page, A-241) that average wages received, for works in *public works*, per day was Rs. 56 for males and Rs. 54 for females. Average number of days got work and average wages received per day, for work in public works, for each State/ group of U.ts. and North-Eastern States are given in Statement 34.1 for interested readers.

Appendix B

Sample Design and Estimation Procedure

Appendix - B

Sample Design and Estimation Procedure

1 Introduction

1.1 The 62nd round (July 2005 - June 2006) of NSS was earmarked for survey on unorganised manufacturing enterprises under the two-digit codes 15 to 37 (Section 'D') of NIC-2004 and enterprises under cotton ginning, cleaning and baling (NIC-2004, code 01405); annual survey of consumer expenditure and survey on employment – unemployment. The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 kilometres from the bus routes and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. All the sample first-stage units of the districts Poonch and Rajouri of Jammu & Kashmir, became casualty and therefore, the district Poonch and Rajouri of Jammu & Kashmir, are outside the survey coverage. Thus, the estimates of Jammu and Kashmir and all-India estimates do not include these two districts. The survey period was divided into four sub-rounds of three months duration each and an equal number of sample villages/blocks (FSUs), as far as possible, was allotted for survey in each of these four sub-rounds.

2 Sample Design

2.1 A stratified multi-stage design was adopted for the 62nd round survey. Two frames were used for this survey viz. List frame and Area frame. List frame was used only for urban sector and that too for selection of manufacturing enterprises only and thus is not relevant for discussion in this report. Area frame was adopted for both rural and urban sectors for selection of First Stage Units (FSU) and the estimates presented in this report are based on sample selected from the area frame. For the area frame, the list of villages as per census 2001 (for Manipur, 1991 census was used since 2001 census list was not available) was used as frame for the rural sector and the latest available list of UFS blocks was used as frame in the urban sector. However, EC-98 was used as frame for the 27 towns with population 10 lakhs or more (as per Census 2001). The ultimate stage units (USU) were households, in both the sectors. In the case of large villages/ blocks requiring hamlet-group (hg)/ sub-block (sb) formation, one intermediate stage was the selection of two hgs/ sbs from each FSU.

2.2 *Selection of the first-stage units:* The various steps involved in making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within an FSU.

2.2.1 *Sampling frame for the first-stage units (FSUs):* The list of villages as per census 2001 (for Manipur, 1991 census was used since 2001 census list was not available) was used as frame for the rural sector and the latest available list of UFS blocks was used as frame in the urban sector. However, EC-98 was used as frame for the 27 towns with population 10 lakhs or more (as per Census 2001).

2.2.2 *Stratification of the first-stage units:* Within each district of a State/ UT, two basic strata were formed:

- i) rural stratum comprising all rural areas of the district and
- ii) urban stratum comprising all the urban areas of the district.

However, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them also formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum. There were 27 towns with population 10 lakhs or more at all-India level as per census 2001.

2.2.3 *Sub-stratification of the first-stage units in rural areas:* Development Commissioner of Small Scale Industries (DCSSI) conducted a survey of all Small Scale Industries (SSI) units in 2003 covering all registered SSI units on a census basis and other SSI units on a sample basis. 9306 villages having 'big' non-ASI registered SSI manufacturing units as per DCSSI census were identified by matching the identification particulars of census 2001 with those of DCSSI census. 'Big' DCSSI unit, on the basis of which villages were identified, satisfied the conditions:

- (a) It was a registered SSI unit in rural area as per DCSSI census belonging to NIC '98 codes 01405, 15 – 37 and it was not registered under sections 2m(i) or 2m(ii) of Factories Act, 1948 and
- (b) It had 6 or more workers.

A subset of these 9306 villages having 'bigger' non-ASI registered SSI manufacturing unit was considered for formation of a separate sub-stratum (termed as sub-stratum 1). The 'bigger' registered SSI units were those which, in addition to fulfilling the criteria (a) and (b) above, satisfied the criteria:

- (c) The SSI unit had gross value of output in 2001 more than the average output (Rs. 7,52,159) of rural SSI units identified in (a) and (b) above and
- (d) The SSI unit had 11 or more workers and
- (e) The output of the SSI unit had been continuously increasing over the last three years between 1999 and 2001.

Sub-stratum 1 villages were identified at the State/ U.T. level after arranging the above villages in descending order of total of gross output of the bigger registered SSI units in the village during these three years and selecting the required number of them from the top. The total number of such sub-stratum 1 villages at all-India level was 462.

2.2.3.1 Thus, sub-stratification of rural areas of each district comprised the following:

- sub-stratum 1: The villages in the district which belonged to the list of 462 villages.
- sub-stratum 2: The villages in the district which were not in sub-stratum 1 but belonged to the set of 9306 villages.
- sub-stratum 3, 4, 5, ... : Remaining FSUs of the district were first arranged in ascending order of census 2001 population. Then $n/2$ sub-strata, n being the stratum allocation excluding the allocations for sub-strata 1 & 2, were formed in such a way that each sub-stratum had more or less equal population.

Sub-strata 1 & 2 were not formed in Kerala. Also sub-strata 1/ sub-strata 2 were not formed for some smaller States/ U.Ts.

2.2.4 Sub-stratification of the first-stage units in urban areas:

(a) For the 27 cities where EC-98 frame was used: Two sub-strata were formed within each stratum based on EC-98 information as under:

sub-stratum 1: all FSUs (i.e., UFS blocks as per the EC-98) with at least one DME or NDME in the unorganised sector.

sub-stratum 2: remaining FSUs.

(b) For towns where latest phase of UFS were used: Two sub-strata were formed as follows:

sub-stratum 1: all FSUs (i.e., UFS blocks as per the latest UFS) identified as Industrial Area (IA) or Bazar Area (BA) or Slum Area (SA).

sub-stratum 2: remaining FSUs

2.2.5 Allocation of FSUs among Strata: At the all-India level, a total number of 9997 FSUs (4847 villages in the rural areas and 5150 UFS blocks in the urban areas) for area frame were allocated on the basis of investigator strength. The allocation between rural and urban sectors was made in proportion to the number of unorganised non-agricultural workers as per EC-98. The total (all-India) rural/ urban sample size were allocated to different States and U.Ts. in proportion to number of unorganised non-agriculture workers as per EC-98 subject to the availability of investigators ensuring more or less uniform work-load. Within each sector of a State/ U.T, the respective sample sizes were allocated to the different strata in proportion to the stratum population as per census 2001.

2.2.6 Allocation to sub-strata:

2.2.6.1 Rural sector: 462 FSUs of sub-stratum 1 were allocated to the districts where these FSUs were located. For each sub-stratum 2, maximum allocation was 4. A set of 856 FSUs in the central sample were selected at all-India level for sub-stratum 2. Minimum allocation for sub-stratum 3 and above was 2.

2.2.6.2 Urban sector: For 27 million plus cities in the urban sector, stratum allocations were distributed over the sub-strata in proportion to the number of non-agricultural workers in the unorganised sector as per EC '98. For other towns, stratum allocation was divided among the sub-strata in proportion to number of FSUs in the sub-strata with double weightage to sub-stratum 1. Minimum sub-stratum allocation was 2.

2.2.7 Selection of first-stage units: Samples were drawn in the form of two sub-samples in each stratum \times sub-stratum. However, all the FSUs of sub-stratum 1 in rural sector were in sub-sample 1.

2.2.7.1 Rural sector:

(a) sub-stratum 1: All 462 FSUs were surveyed.

- (b) sub-stratum 2: FSUs were selected with PPSWR where size was number of non-ASI registered SSI DME units in the village.
- (c) sub-stratum 3, 4, 5,: FSUs were selected by PPSWR with size as population as per census 2001.

2.2.7.2 Urban sector:

(a) For 27 million plus cities: FSUs were selected by PPSWR with the *number of manufacturing workers* in the *unorganised sector as per EC '98* as size. The number of manufacturing workers was taken as 1 for those blocks where there were no unorganised manufacturing enterprises. However, some manufacturing enterprises had been found to have large number of workers as per EC- 98 frame even though they were in the unorganised sector. Some adjustment to the size of workers for such enterprises were, therefore, made before calculating the size of FSUs. For this purpose, any unorganised manufacturing enterprise having more than 200 workers was deemed to have a size equal to 200. Enterprise sizes were thereafter added up to get the FSU size and sub-stratum/ stratum size.

(b) For other cities/ towns: FSUs were selected by SRSWOR.

2.3 Selection of Ultimate-stage Units within an FSU: The remaining paragraphs of this sub-section outlines the various steps leading to the actual selection of USUs within an FSU.

2.3.1 Selection of hamlet-groups/sub-blocks: Large villages/blocks were divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector. For this, approximate present population (P) and approximate total number of non-agricultural enterprises (E) for the whole FSU were ascertained first from knowledgeable persons. Depending upon the values of 'P' and 'E', it was divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector as stated below.

population (P)	no. of hgs/ sbs to be formed	no. of non-agricultural enterprises (E)	no. of hgs/ sbs formed
less than 1200	1	less than 120	1
1200 - 1799	3	120 - 179	3
1800 - 2399	4	180 - 239	4
2400 - 2999	5	240 - 299	5
and so on	...	and so on	...

However, while considering enterprise criteria, segment 9¹ enterprises, if any, were excluded i.e., the value of 'E' was adjusted in respect of the number of enterprises in segment 9. For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur,

¹ **Formation of segment 9:** Segment 9 was formed in the selected sample FSUs of rural sub-strata 1 & 2 of each stratum. It comprised only the big non-ASI registered SSI manufacturing unit(s) in the village as per DCSSI census on the basis of which the villages had been identified. The names of such units in the selected sample FSUs were supplied to field offices. If any such unit was found to be eligible for ASI, it was not be covered under segment 9. If there was a change in the status of the enterprise from DME to NDME or OAME, it was still considered eligible enterprise belonging to segment 9. Only top 10 eligible enterprises in terms of number of workers constituted segment 9.

Doda districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups were formed as follows.

approximate present population of the sample village	no. of hgs to be formed
less than 600 (no hamlet-groups)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

For enterprise criterion, procedure was not changed for the above areas.

The higher of the two values as per population and enterprise criteria was accepted as the number of hgs/ sbs to be actually formed. Hamlet-groups/ sub-blocks were formed by more or less equalizing population. Out of all hg's/ sb's formed in the FSU, two hg's/ sb's were selected for listing in the following manner - one with the maximum number of DMEs (or with maximum number of NDME if there was no DME or with maximum number of OAMEs if there was no DME/ NDME in the FSU or with maximum percentage share of population if there was no manufacturing enterprise in the entire FSU) was always selected and termed as Segment 1; one more hg/ sb was selected *randomly* and termed as Segment 2.

2.3.2 Sampling frame of households: All households listed in a village/UFS block where no hamlet-group/sub-block formation was done, or the households listed in the two selected segments of the village/UFS block where hamlet-group/sub-block formation was done, constituted the sampling frame of households.

2.3.3 Stratification of rural households: For the employment and unemployment survey, in rural sector in each selected village/ segment, three second stage strata (SSS) namely SSS 1, SSS 2 & SSS 3 were formed and in urban sector in each selected block/ segment, two second stage strata (SSS) namely SSS 2 & SSS 3 were formed for schedule 10. The number of households to be surveyed for schedules 10 in each FSU was 8. Composition of SSS with number of households to be surveyed for schedule 10 was as follows:

rural:

SSS	composition of SSS	number of households to be surveyed for schedule 10	
		without hg/ sb formation	with hg/ sb formation (for each segment)
SSS 1:	households with at least one member worked in any public work scheme during last 365 days.	2	1
SSS 2:	households with at least one member of age below 30 years with educational level secondary or above	2	1
SSS 3:	other households	4	2

urban:

SSS	composition of SSS	number of households to be surveyed for schedule 10	
		without hg/ sb formation	with hg/ sb formation (for each segment)
SSS 2:	households with at least one member of age below 30 years with educational level secondary or above	4	2
SSS 3:	other households	4	2

2.3.4 Selection of households: For the employment and unemployment survey, from each SSS the sample households for both the schedules were selected by SRSWOR. If a household was selected both for schedule 1.0 and schedule 10, only schedule 1.0 was canvassed in that household and the household for schedule 10 was replaced by next household in that particular SSS frame for schedule 10.

2.4 The number of village/blocks allotted for survey in the NSS 62nd round along with the number of village/blocks actually surveyed and number of persons enumerated in respect of employment and unemployment survey are given for different States and union territories, in Table 1, at the end of Appendix-B.

3. Estimation Procedure

3.1 Notations:

s = subscript for s -th stratum

t = subscript for t -th sub-stratum

m = subscript for sub-sample ($m = 1, 2$)

i = subscript for i -th FSU [village (panchayat ward) / block]

d = subscript for a segment ($d = 1, 2, 9$)

j = subscript for j -th second stage stratum in an FSU/ segment ($j = 1, 2, 3, 4, 5$ or 6)

k = subscript for k -th sample household/enterprise under a particular second stage stratum within an FSU/ segment

D = total number of hamlet-groups/sub-blocks formed in the sample village (panchayat ward) / block

$D^* = 1$ if $D = 1$

$= (D - 1)$ for FSUs with $D > 1$

N = total number of FSUs in any urban sub-stratum belonging to the towns other than million plus cities

Z = total size of a rural sub-stratum or urban sub-stratum of million plus cities (= sum of sizes for all the FSUs of a sub-stratum)

z = size of sample village/block used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/block/ segment of sample FSU

h = number of households surveyed in a second-stage stratum of a village/block/ segment of sample FSU

E = total number of enterprises listed in a second-stage stratum of a village/block/ segment of sample FSU

e = number of enterprises surveyed in a second-stage stratum of a village/block/ segment of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X}, \hat{Y} = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k -th household in the j -th second stage stratum of the d -th segment ($d = 1, 2, 9$) of the i -th FSU belonging to the m -th sub-sample for the t -th sub-stratum of s -th stratum;

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

3.2 Estimation of aggregates for a particular sub-sample and stratum:

3.2.1 Rural:

(a) Estimation formula for a sub-stratum 1 of a stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other sub-strata:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.2 Urban:

(a) Estimation formula for a sub-stratum of million plus cities:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for a sub-stratum of other strata:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.3 Estimate for a stratum:

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

3.3 Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

3.4 Overall Area Frame Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the area frame estimates (\hat{Y}_s) of stratum over all strata belonging to the State/ UT/ all-India.

3.5 Estimates of Ratios:

Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

3.6 Estimates of Error:

3.6.1 For aggregate \hat{Y} :

$$Var(\hat{Y}) = \sum_s Var(\hat{Y}_s)$$

where $Var(\hat{Y}_s)$ are as given below.

3.6.1.1 For strata with PPSWR selection at first stage:

$$Var_{ppswr}(\hat{Y}_s) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{sti} \hat{Y}_{sti}}{Z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$ and

$$\hat{Y}_{stij} = \left[\frac{H_{sti1j}}{h_{sti1j}} \sum_{k=1}^{h_{sti1j}} y_{sti1jk} + D_{sti}^* \times \frac{H_{sti2j}}{h_{sti2j}} \sum_{k=1}^{h_{sti2j}} y_{sti2jk} \right]$$

3.6.1.2 For strata with SRSWOR selection at first stage:

$$Var_{srswor}(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2 ,$$

where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

3.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_s M\hat{S}E_s(\hat{R}) + \sum_{s'} M\hat{S}E_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

3.6.2.1 For strata with PPSWR selection at first stage:

$$M\hat{S}E_s(\hat{R}) = \sum_t \frac{1}{n_{st}(n_{st} - 1)} \sum_{i=1}^{n_{st}} \left[\frac{Z_{st}}{z_{sti}} (\hat{Y}_{sti} - \hat{R} \hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R} \hat{X}_{st}) \right]^2$$

where

$$\hat{Y}_{sti} = \sum_j \hat{Y}_{stij} , \quad \hat{X}_{sti} = \sum_j \hat{X}_{stij} ,$$

$$(i) \quad \hat{Y}_{stij} = \left[\frac{H_{sti1j}}{h_{sti1j}} \sum_{k=1}^{h_{sti1j}} y_{sti1jk} + D_{sti}^* \times \frac{H_{sti2j}}{h_{sti2j}} \sum_{k=1}^{h_{sti2j}} y_{sti2jk} \right]$$

$$(ii) \quad \hat{X}_{stij} = \left[\frac{H_{sti1j}}{h_{sti1j}} \sum_{k=1}^{h_{sti1j}} x_{sti1jk} + D_{sti}^* \times \frac{H_{sti2j}}{h_{sti2j}} \sum_{k=1}^{h_{sti2j}} x_{sti2jk} \right]$$

3.6.2.2 For strata with SRSWOR selection at first stage:

$$M\hat{S}E_{s'}(\hat{R}) = \sum_t \frac{1}{4} \left[(\hat{Y}_{s't1} - \hat{Y}_{s't2})^2 + \hat{R}^2 (\hat{X}_{s't1} - \hat{X}_{s't2})^2 - 2\hat{R}(\hat{Y}_{s't1} - \hat{Y}_{s't2})(\hat{X}_{s't1} - \hat{X}_{s't2}) \right]$$

where $\hat{Y}_{s't1}$ and $\hat{Y}_{s't2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

3.7 Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{Var(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

Table 1: Number of villages/ blocks allotted, number of villages/ blocks surveyed and number of persons enumerated in different States and Union Territories

CENTRAL		*
STATE		

GOVERNMENT OF INDIA
NATIONAL SAMPLE SURVEY ORGANISATION
SOCIO-ECONOMIC SURVEY
SIXTY-SECOND ROUND: JULY 2005 – JUNE 2006
SCHEDULE 10: EMPLOYMENT AND UNEMPLOYMENT

[0] descriptive identification of sample household	
1. state/u.t.:	5. hamlet name:
2. district:	6. ward /inv. unit /block:
3. tehsil/town: *	7. name of head of household:
4. village name:	8. name of informant:

[1] identification of sample household										
item no.	item	code				item no.	item	code		
1.	srl. no. of sample village/block					11.	sub-sample			
2.	round number	6		2		12.	FOD sub-region			
3.	schedule number	1	0	0		13.	segment number (1/2)			
4.	sample (<i>central-1, state-2</i>)					14.	second-stage stratum			
5.	sector (<i>rural-1, urban-2</i>)					15.	sample household number			
6.	state-region					16.	srl. no. of informant (as in col. 1, block 4)			
7.	district					17.	response code			
8.	stratum					18.	survey code			
9.	sub-stratum					19.	reason for substitution of original household (code)			
10.	sub-round									

Codes for Block 1

item 17: response code:

informant: *co-operative and capable -1, co-operative but not capable -2, busy -3, reluctant -4, others -9.*

item 18: survey code: household surveyed: *original -1, substitute -2, casualty -3.*

item 19: reason for substitution of original household:

informant busy -1, members away from home -2, informant non-cooperative -3, others -9.

* tick mark (✓) may be put in the appropriate place.

[2] particulars of field operations													
srl. no.	Item	investigator/ senior investigator				senior investigator / superintendent				superintendent/ senior superintendent			
(1)	(2)	(3)				(4)				(5)			
1.	i) name (block letters)												
	ii) code												
2.	date(s) of :	DD	MM	YY	DD	MM	YY	DD	MM	YY	DD	MM	YY
	(i) survey/ inspection												
	(ii) receipt												
	(iii) scrutiny												
	(iv) despatch												
3.	number of additional sheets attached												
4.	total time taken to canvass Sch. 10 (in minutes)												
5.	signature												

[7] remarks by investigator/ senior investigator

[8] comments by supervisory officer(s)

--

[3] household characteristics										
1.	household size				8.	does the household possess any ration card? (yes - 1, no - 2)				
2.	principal industry (NIC-2004)	description:				9.	for entry 1 in item 8, type of ration card (code)			
code (5-digit)						household consumer expenditure (Rs.) during last 30 days out of:				
3.	principal occupation (NCO-1968)	description:				10.	purchase			
code (3-digit)						11.	home produced stock			
4.	household type (code)					12.	receipts in exchange of goods and services			
5.	religion (code)					13.	gifts and loans			
6.	social group (code)					14.	free collection			
7.	land possessed as on date of survey (code)					15.	total (items 10 to 14)			

Codes for Block 3

item 4: **household type:**

for rural areas: self-employed in non-agriculture -1, agricultural labour -2, other labour -3,
self-employed in agriculture -4, others -9.

for urban areas: self-employed -1, regular wage/salary earning -2, casual labour -3, others -9.

item 5: **religion:** Hinduism -1, Islam -2, Christianity -3, Sikhism -4, Jainism -5, Buddhism -6, Zoroastrianism -7, others -9.

item 6: **social group:** scheduled tribe -1, scheduled caste -2, other backward class -3, others -9.

item 7: **land possessed (area in hectare):**

area in hectare	code	area in hectare	code
less than 0.005	01	2.01 – 3.00	07
0.005 - 0.01	02	3.01 - 4.00	08
0.02 - 0.20	03	4.01 - 6.00	10
0.21 - 0.40	04	6.01 - 8.00	11
0.41 - 1.00	05	greater than 8.00.....	12
1.01 – 2.00	06		

Note: 1 acre = 0.4047 hectare, 1 hectare=10,000 square metre

item 9: **type of ration card:** Antyodaya -1, BPL -2, APL -3, others -9.

Codes for Block 4**col. (3): relation to head:**

self -1, spouse of head -2, married child -3, spouse of married child -4, unmarried child -5, grandchild -6, father/mother/father-in-law/mother-in-law -7, brother/sister/brother-in-law/sister-in-law/other relatives -8, servants/employees/other non-relatives -9.

col. (6): marital status: never married -1, currently married -2, widowed -3, divorced/separated -4.**col. (7): educational level - general:**

not literate -01, literate without formal schooling: EGS/NFEC/AEC -02, TLC -03, others -04; literate: below primary -05, primary -06, middle -07, secondary -08, higher secondary -10, diploma/certificate course -11, graduate -12, postgraduate and above -13.

col. (8): educational level - technical:

no technical education -01, technical degree in agriculture/ engineering/ technology/ medicine, etc.-02;
diploma or certificate (below graduate level) in: agriculture -03, engineering/ technology -04, medicine -05, crafts -06, other subjects -07;
diploma or certificate (graduate and above level) in: agriculture -08, engineering/ technology -09, medicine -10, crafts -11, other subjects -12.

col. (9): status of current attendance in educational institutions:

currently not attending:

never attended: school too far -01, to support household income -02, education not considered necessary -03, to attend domestic chores -04, others -05;
discontinued studies: school too far -11, to support household income -12, education not considered necessary -13, to attend domestic chores -14, others -15;
dropped out: school too far -16, to support household income -17, education not considered necessary -18, to attend domestic chores -19, others -20;

currently attending in:

EGS/NFEC/AEC -21, TLC -22, pre-primary (nursery/ kindergarten, etc.) -23, primary (class I to IV/ V) -24, middle -25, secondary and higher secondary -26, graduate & above in: agriculture -27, engineering/ technology -28, medicine -29, other subjects -30;
diploma or certificate (below graduate level) in: agriculture -31, engineering/ technology -32, medicine -33, crafts -34, other subjects -35;
diploma or certificate (graduate and above level) in: agriculture -36, engineering/ technology -37, medicine -38, crafts -39, other subjects -40.

col. (10): type of institution: government -1, local body -2, govt. aided private institution -3, private unaided -4, not known -5.**col. (11): whether receiving / received any vocational training:**

yes: receiving formal vocational training -1; received vocational training: formal -2, non-formal: hereditary -3, others -4;
did not receive any vocational training -5.

col. (12): whether got work in public works: got work in public works -1, sought but did not get work in public works -2, did not seek work in public works -3.**col. (17): whether made any complaint to any authority:**

yes: complained to panchayat -1, complained to BDO/ SDO/ other Govt. official -2;
no: knew that there was provision for complaining but did not complain -3, did not know that there was provision for complaining -4.

Codes for Block 5

col. (3): **status:**

worked in h.h. enterprise (self-employed): *own account worker -11, employer -12, worked as helper in h.h. enterprise (unpaid family worker) -21; worked as regular salaried/ wage employee -31, worked as casual wage labour: in public works -41, in other types of work -51; did not work but was seeking and/or available for work -81, attended educational institution -91, attended domestic duties only -92, attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use -93, rentiers, pensioners, remittance recipients, etc. -94, not able to work due to disability -95, others (including begging, prostitution, etc.) -97.*

col. (5) and col. (10): **industry:** 5-digit code as per NIC-2004.

col. (6) and col. (11): **occupation:** 3-digit code as per NCO-68.

col. (8): **status:** codes as in col. 3 (**only codes 11 - 51 are applicable here**).

Codes for Block 6

col. (4) and (18): **status:**

codes 11, 12, 21, 31, 41, 51 and 91-95, 97 of col. (3), block 4 and also the following codes: had work in h.h. enterprise but did not work due to: sickness -61, other reasons -62; had regular salaried/wage employment but did not work due to: sickness -71, other reasons - 72; sought work -81, did not seek but was available for work -82, did not work due to temporary sickness (for casual workers only) -98.

col. (5): **industry division:** 2- digit division codes as per NIC-2004.

col. (6): **type of public works:** *irrigation canal/ water conservation/ water harvesting/ drought proofing/ flood control/ embankment, etc -1, land leveling, development of orchard, etc. -2, road construction, laying pipes and cables -3, building construction/ repair -4, sanitation, running crèche, etc. -5, any other work -9.*

col. (19): **industry:** 5-digit code as per NIC-2004.

col. (20): **occupation:** 3-digit code as per NCO-68.
