

**Unorganised Manufacturing Sector in India
Its Size, Employment
and
Some Key Estimates**

NSS Fifty-first round

July 1994 - June 1995

National Sample Survey Organisation
Department of Statistics
Government of India
August 1998

(i)
P R E F A C E

The National Sample Survey Organisation (NSSO) conducted the survey of the units engaged in manufacturing and repair activities in its fifty-first round : July 1994 - June 1995. This integrated survey was conducted using the list of enterprises and establishments in the unorganised sector, obtained from the Economic Census 1990. The 51st round survey covered directory manufacturing establishments in addition to own-account manufacturing enterprises and non-directory manufacturing establishments which were earlier covered in 40th & 45th rounds. Results obtained from this enquiry are being presented in three reports.

The present report is the first in the series. It contains the number of unorganised manufacturing and repairing enterprises, persons employed therein and value added by these enterprises. Tables containing detailed results for the country are appended to this report.

While the field work of the survey was done by the Field Operations Division of the NSSO, collected data were processed and tabulated by the Data Processing Division of the NSSO, Calcutta. I am grateful to the Governing Council members and officers of the Department of Statistics for their suggestions which have improved the quality of the report. Finally, I wish to put on record my appreciation for the team of SDRD officers for planning and designing of the survey, undertaking analysis of the tabulated data, preparing the draft report and then revising it, based on the comments received.

I hope the report will be useful to planners and policy makers. Comments/suggestions for improvement will be most welcome.

New Delhi
August 17, 1998

S. Ray
Chief Executive Officer
National Sample Survey Organisation

Highlights*

- Out of about 1.2 lakhs enterprises surveyed in villages, only 6 per thousand maintained usable books of accounts. In urban areas, only 19 per thousand of the total of about 0.7 lakh surveyed enterprises maintained usable books of accounts.
- The estimated number of unorganised manufacturing and repair enterprises in India during 1994 - 1995 was about 145 lakhs.
- Of the total estimated enterprises, about 72 per cent were located in rural areas and the rest in urban areas.
- About 84 per cent (91 per cent for rural and 68 per cent for urban) of the total number of enterprises in the country operated usually with the help of unpaid household labour only. The remaining 16 per cent enterprises employed at least one hired worker (including paid household workers) on a fairly regular basis during the reference period of one year.
- About 78 per cent of the total enterprises which managed without engaging any hired worker were in the rural areas and the rest in urban areas.
- Out of the total establishments (each of which employed at least one hired or paid household worker), in about 71 per cent establishments, total number of workers was 5 or less each.
- Among the states, Uttar Pradesh had the highest number of enterprises both in rural and urban areas.
- Among various activities, manufacture of wood and wood products, furniture & fixtures was found to be the major activity in rural India. On the other hand, repair service was the major activity among the enterprises located in urban areas of the country. About 23 per cent of the enterprises of rural / urban India were engaged in the activities, noted above.
- About 99 per cent of the enterprises in rural India and 95 per cent of the enterprises in urban India were proprietary in nature (i.e. ownership vested with one person only). Partnership enterprises had a share of 1 per cent in total number of enterprises in rural India and a share of 4 per cent in urban India.
- Most of the enterprises (rural: 94 per cent, urban: 75 per cent) were not registered with any agency.
- About 66 per cent of the enterprises in rural India and about 52 per cent of the enterprises in urban India did not use any energy in their manufacturing process. The major sources of energy used by the enterprises in the manufacturing process were: electricity (rural: 8 per cent of the enterprises, urban: 30 per cent), firewood (rural: 10 per cent, urban: 3 per cent), coal/coal gas (rural: 2 per cent, urban: 3 per cent), charcoal (rural & urban: 2 per cent each) and diesel oil (rural: 4 per cent, urban: 1 per cent).

* Results based on unorganised manufacturing enterprise survey (Sch. 2.2, 51st round) are resented in three reports viz. 433(51/2.2/1), 434(51/2.2/2) & 435(51/2.2/3). However, for convenience of the users, a combined set of summary statistics is presented in each of the three reports.

(iii)

- In rural India, about 93 per cent of the enterprises were perennial (i.e. operating almost throughout the year) and 6 per cent were seasonal. In urban India, their share was about 98 per cent and 2 per cent respectively.
- Of the household enterprises (i.e. those run on either proprietary or partnership basis), about 6 per cent in rural India and 4 per cent in urban India operated without any fixed premises. About 76 per cent of the enterprises in rural India and 46 per cent of the enterprises in urban India used the residences of the owners for their activity.
- Of the household enterprises, about 12 per cent were owned by ST's and 23 per cent by SC's in rural areas. In urban areas, they respectively owned about 2 per cent and 12 per cent of the household enterprises.
- The estimate of total number of persons employed in the unorganised manufacturing and repair enterprises in India was about 332 lakhs.
- Out of the total workers employed, about 67 per cent were engaged in enterprises located in the Indian villages and the rest in urban blocks.
- About 68 per cent of the total employed were engaged in enterprises operated without engaging any hired worker (including paid household worker).
- Nearly 31 per cent of the total workers employed were females and the rest males.
- Female participation in unorganised manufacturing and repair enterprises was much more in rural areas than in urban areas. There were 378 females

per thousand of total employed in rural

areas, as against only 175 females in urban areas.

- Around 56 per cent (53 per cent in rural India and 62 per cent in urban India) of the total employed were directly involved in or associated with the manufacturing process and the rest were other workers. Among those directly linked with the manufacturing process, about 23 per cent in rural India and 60 per cent in urban India were hired workers.
- About 9 per cent of the workers (rural: 10 per cent, urban: 9 per cent) were children. Among the child workers, percentage share of girls was about 46 per cent in rural India and 23 per cent in urban India.
- The average gross value added (during the reference period of last one year) was estimated as Rs. 12616 for a rural enterprise and Rs. 47496 for an urban enterprise.
- Contribution of the unorganised manufacturing sector, in terms of value added, to the national economy was Rs. 32275 crores, out of which little less than 41 per cent was from enterprises located in the rural areas and the rest from urban areas.
- Manufacture of food products industry (NIC 20 & 21 taken together) alone covered more than one-fifth (about 22 per cent) of the total value added in rural India and little more than 10 per cent in urban India.
- The share of Uttar Pradesh in value added in the total rural sector was about one-fifth, while Maharashtra contributed little less than one-fifth of value added in the total urban sector.

- Average values of fixed assets owned, working capital (closing balance) and outstanding loan for a rural enterprise were Rs. 13406, Rs. 1787 and Rs. 1185 respectively. The same for an urban enterprise were Rs. 58957, Rs. 15939 and Rs. 8600 respectively.
- The total value of the fixed assets owned was about Rs. 37696 crores, of which 37 per cent was from the enterprises located in the rural areas and the rest in the urban areas.
- 'Manufacture of food products (NIC 20)' had the highest share (about 16 per cent) in the total fixed assets owned.
- Per enterprise estimate of fixed assets owned was more in urban areas than in rural areas in each of OAMEs, NDMEs and DMEs.
- More than 50 per cent of the total fixed assets owned were accounted for by 'land' and 'building'. Besides other, 'plant & machinery' was the only other item having noteworthy share.
- Much of the net additions to the fixed assets of the type owned was made for the items 'building' and 'plant & machinery' in each of OAMEs, NDMEs and DMEs in both rural and urban areas.
- For all enterprises taken together, the fixed assets hired per enterprise added up to Rs. 10122. Value of fixed assets hired per enterprise was much higher in urban areas (Rs. 31915) than in rural areas (Rs. 1803).
- The total working capital (net of opening balance and closing balance) was estimated as about Rs. 1614 crores, of which 34 per cent was in the rural areas and the rest in urban areas.
- The estimate of rent per enterprise was much higher in urban enterprises (Rs. 1762) than the rent in rural enterprises (Rs. 110).
- Loans taken by the unorganised manufacturing enterprises outstanding at the end of the reference year were estimated as about Rs. 4689 crores, of which 27 per cent was for the enterprises located in rural areas and the rest in urban areas.
- Mainly the public sector banks, regional rural banks and other commercial banks provided loans to the unorganised manufacturing and repairing enterprises both in rural and urban areas. Loans taken from the 'money lenders' were also significant.
- Ratio of value added to output was in general higher in rural areas than in the urban areas in different industries. For all industries taken together, the ratio was 0.45 in rural areas, as against 0.38 in urban areas.
- Ratio of value added to fixed assets was higher in rural areas (0.83) than in urban areas (0.52) for all industries taken together.

LIST OF DETAILED STATISTICAL TABLES

TABLE NO.	DESCRIPTION	PAGE NO.
(1)	(2)	(3)
1	Estimated number of enterprises and persons employed therein by nature of employment, industry (group / division) and enterprise type separately for rural and urban areas (i) Rural (ii) Urban	A1 - A36 A1 - A18 A19 - A36
2	Estimated number of persons employed by sex, type of workers, industry (group / division) and enterprise type separately for rural and urban areas (i) Rural (ii) Urban	A37 - A72 A37 - A54 A55 - A72
3	Distribution of estimated enterprises by number of persons employed for each industry (group / division) separately for OAMEs and NDMEs in each of rural and urban areas (i) Rural (ii) Urban	A73 - A95 A73 - A83 A84 - A95
4	Distribution of estimated directory manufacturing establishments by number of persons employed in different industry (group / division) separately for rural and urban areas (i) Rural (ii) Urban	A96 - A106 A96 - A100 A101 - A106
5	Estimates of some important characteristics per enterprise by industry (group / division) and enterprise type separately for rural and urban areas (i) Rural (ii) Urban	A107 - A154 A107 - A130 A131 - A155

	(ii) Urban	A209 - A226

CHAPTER ONE

Introduction

1.0 The unorganised sector holds the key to understanding the economic situation in developing countries such as India. The importance of this sector had been realised by the Indian planners and policy makers in the 1950s. The need for statistical information about it was also widely recognised. The household-based non-agricultural activities had been covered by the National Sample Survey Organisation (NSSO) since 1950. In all the surveys, the relevant activities of a sample of households were covered irrespective of their scale of operations except the manufacturing activities carried out by the enterprises registered under the Factories Act, 1948.

1.1 In the early 1970s, at the time of formulation of the Fifth Five Year Plan, the Planning Commission was concerned about the employment and earnings of the self-employed in non-agricultural activities. The NSSO therefore devoted the 29th round (1974-75) mainly to a survey of self-employed own account workers engaged in non-agricultural enterprises in different sectors in rural as well as urban areas. The household enterprises covered by the survey were those operated by own account workers (i.e., those not employing any hired worker) and those household enterprises which did not usually employ more than 5 hired workers. However, units engaged in manufacturing and repairing services registered under Factories Act were excluded from the survey.

1.2 The household approach of identifying the units excluded the non-household based units in the unorganised sector. Further, a review of the surveys indicated that a better sampling frame was necessary to generate reasonably useful statistics on unorganised sector. The need for identifying areas with a concentration of

enterprises was, therefore, felt for ensuring an efficient sampling for the future surveys. A country-wide economic census, the first of its kind, was undertaken in 1977 under the auspices of the Central Statistical Organisation (CSO) to provide a good frame and background information needed for formulating an efficient sampling design.

1.3 The scope of the 1977 economic census was limited to non-agricultural enterprises employing at least one hired worker on a fairly regular basis. The enterprises employing at least one hired worker are called 'establishments'. Following this census, small establishments and enterprises not employing any hired worker on a fairly regular basis (these units are called own account enterprises (OAEs)) engaged in manufacturing and repairing activities were surveyed in 33rd round of NSS during 1978-79.

1.4 The second economic census was undertaken in 1980 along with the house-listing operations of the 1981 population census. The scope and coverage of the second economic census was enlarged to include the own account enterprises (OAEs) engaged in activities other than crop production and plantation. The establishments were divided into two categories as (i) Directory Establishments (DEs) and (ii) Non-Directory Establishments (NDEs), the difference being that the former employed a total of six or more workers, while the latter employed a total of five or less workers. Thus, in all, three types of enterprises were formed, viz., (i) OAEs, (ii) NDEs and (iii) DEs in the second economic census. As a follow-up to the second economic census, OAEs and NDEs engaged in manufacturing and repairing activities (i.e., OAMEs and NDMEs respectively) were surveyed in the 40th and 45th rounds of NSS during July

1984-June 1985 and July 1989-June 1990 respectively. The Directory Manufacturing Establishments (DMEs) were surveyed during October 1984-September 1985 and October 1989 to September 1990 by field staff of NSSO under the technical guidance of CSO.

1.5 A third economic census was conducted in 1990 along with the house listing operations of the 1991 population census. As a follow-up to the third economic census, the first integrated survey on unorganised manufacture covering own account manufacturing and repairing enterprises (OAMEs), Non-Directory manufacturing and repairing establishments (NDMEs) and Directory manufacturing and repairing establishments (DMEs) were undertaken during the 51st round (July 1994-June 1995) under the technical guidance of NSSO.

1.6 In the 51st round all manufacturing and repairing enterprises covered by the two-digit codes (called divisions) 20 to 39 and 97 under the revised National Industrial Classification of different economic activities, 1987 (henceforth in this report termed NIC, 1987) were considered for survey purpose. Hereafter in this report, the term enterprises will mean manufacturing and repairing enterprises or establishments as the case may be.

1.7 Enterprises which were registered under Sections 2m(i) and 2m(ii) of the Factories Act, 1948 (i.e., enterprises employing 10 or more workers using power and those employing 20 or more workers without power) and bidi and cigar manufacturing enterprises registered under bidi and cigar workers (condition of employment) Act, 1966 were not covered in this survey. These enterprises, not covered in the 51st round survey, were covered in the Annual Survey of Industries undertaken by CSO.

1.8 The 51st round survey of unorganised manufacturing and repairing enterprises covered, in the central sample, the whole of the Indian Union except (i) Ladakh, Kargil, Anantnag, Pulwara, Srinagar, Badgam,

Baramulla and Kupwara districts of Jammu & Kashmir, (ii) 768 interior villages of Nagaland (out of a total of 1232 villages) situated beyond five kilometers of the bus route and (iii) 195 villages of Andaman & Nicobar Islands (out of a total of 549 villages) which remained inaccessible throughout the year. Thus the corresponding State/U.T. level estimates and the All-India results presented in this report are based on the areas other than those left out from the survey coverage.

1.9 In the case of central sample, 8214 villages were surveyed in rural areas and 5258 enumeration blocks/Urban-frame-survey blocks were surveyed in urban areas (villages/urban blocks with no manufacturing unit surveyed, in spite of having some enterprises in these villages/urban blocks, are excluded from this count). Detailed information was collected from each of the selected enterprises of the sample villages and blocks.

1.10 A note on sample design and estimation procedure followed in the 51st round survey is given in Chapter Three. One salient feature of the sample design followed is that two different sampling schemes were used for selection of sample units from the central sample. While 50% of the sample first stage units (FSU) of each state/UT were selected according to a particular sampling scheme, the remaining 50% were selected following a different sampling scheme. In one half of the sample FSUs, a sample of maximum 16 enterprises (OAMEs, NDMEs and DMEs taken together) were selected from each FSU for detailed enquiry. In the other half of the sample FSUs, all eligible manufacturing and repair enterprises available in the selected FSU (or part of FSU in case of hamlet-group/sub-block formation) were surveyed without resorting to any sample selection. The pooled estimates based on these two sampling schemes are discussed in this report.

1.11 The number of sample villages and blocks allotted for survey and actually surveyed in different states was as given in Statement 0.

1.12 The listing schedule was used for listing the manufacturing and repairing enterprises mainly for preparing the frame for drawing the required number of sample enterprises for collection of detailed information in each selected village/block. Information collected through listing schedule was used for calculating multipliers for estimation purpose. The enterprise schedule was canvassed in the selected sample enterprises for collecting the basic information, such as employment, fixed assets, working capital, borrowings, input, output and value added of the sampled enterprise.

1.13 The present report, the first of the series of reports being released on unorganised manufacture based on the data collected through schedule 2.2 in NSS 51st round, discusses size of the unorganised manufacturing sector in India, number of persons employed and yearly gross value added in details. Besides, some other key estimates like fixed capital, working capital and borrowings are also discussed in brief.

The distribution of unorganised manufacturing and repairing enterprises and their employment mainly by ownership type, source of energy used, agency of registration, nature of operation, location of premises and social group of the owner in the second report(No. 434) on unorganised manufacture. Proportion of child labourers engaged in different activities is also included in this report. Assets and borrowings of the unorganised manufacturing and repairing enterprises are discussed in another report (No. 435).

1.14 Concepts and definitions of a few important items relevant to the present report adopted in the survey are explained in Chapter Two, while Chapter Three gives a note on sample design and estimation procedure. Major findings based on the survey data are discussed in summary form in Chapter Four. Industry division / group codes and the corresponding industrial activities are given in Chapter Five. The detailed statistical tables are given in APPENDIX.

Statement 0 : Distribution of number of FSUs allotted and actually surveyed in different states						
STATE	number of FSUs allotted			number of FSUs surveyed		
	Rural	Urban	Total	Rural	Urban	Total
(1)	(2)	(3)	(4)	(5)	(6)	(7)

CHAPTER TWO

Concepts and definitions

2.0 The concepts and definitions as followed in the survey of unorganised manufacturing and repairing enterprises during 51st round (July 1994 - June 1995) was broadly on the lines of recent past rounds on unorganised manufacturing and repairing enterprises. A few of the important items relevant to this report are discussed below to facilitate understanding of the report.

2.1 **Enterprise** : An undertaking engaged in the production and/or distribution of some goods and/or services meant mainly for the purpose of sale, whether fully or partly, is termed as an enterprise. An enterprise may be owned and operated by a single household or by several households jointly on a partnership basis, or by an institutional body. The activities of an enterprise may be carried out by household members and/or by hiring outside labourer on a fairly regular basis.

2.2 **Own-account enterprise** : An enterprise which is run without any hired worker employed on a fairly regular basis is termed an own account enterprise. If such an enterprise is engaged in manufacturing and/or repairing activities, it is termed an own account manufacturing enterprise(OAME).

2.3 **Establishment** : An enterprise which is **employing at least one hired worker** on a fairly regular basis is termed establishment.

2.4 **Non-directory establishment** : An establishment employing less than six workers (household and hired workers taken together) is termed non-directory establishment. If such an establishment is engaged in manufacturing and/or repairing activities, it is termed non-directory manufacturing establishment (NDME).

2.5 **Directory establishment** : A directory

establishment is an establishment which has employed six or more workers (household and hired workers taken together). If such an establishment is engaged in manufacturing and/or repairing activities, it is termed directory manufacturing establishment (DME).

2.6 **Workers** : All persons, household and non-household, paid or unpaid, those who are directly or indirectly associated with or incidental to manufacturing and/or repairing activities of an enterprise are workers. Part-time workers are also taken as workers of the enterprise so long as they are engaged on a fairly regular basis. The workers who are directly engaged in or incidental to manufacturing and/or repairing activities of an enterprise have been divided into three different categories, namely, (i) hired workers (other than household workers), (ii) paid household workers and (iii) unpaid household workers. The remaining workers i.e., the workers who are indirectly associated with or incidental to manufacturing process are classified as "other workers".

2.6 (i) **Hired workers** : A hired worker is a person employed directly or through any agency on payment of regular wage or salary. Apprentices, paid or unpaid, are taken as hired workers. Paid household workers, servants and resident workers working in an enterprise are also considered as hired workers. But in this report "paid household workers" and (other than household) hired workers are shown separately.

2.6(ii) **Unpaid household workers** : All persons belonging to the household of the proprietor or households of the partners who work in or for an enterprise without regular salary or wages are unpaid household workers.

2.6 (iii) **Other workers** : All persons who are indirectly associated with or incidental to the manufacturing process of a manufacturing and/or repairing enterprise. This category of workers include persons holding the position of supervision and management, clerks, store-keepers, sweepers, darwans etc.

2.7 **Fairly regular basis** : The term "fairly regular basis" means the major part of the time when operation(s) of an enterprise are carried out during a reference period.

2.8 **Fixed assets** : Fixed assets mean assets of an enterprise in the form of land, building, and other construction, plant & machinery, transport equipment, tools and other fixed assets (new or used) that have a normal economic life of more than one year from the date of acquisition i.e., through outright purchase / hire purchase/loan/mortgage and/ or construction, irrespective of their use at the time of survey. Market value of the fixed assets owned by the enterprise as on last day of reference year has been considered for the purpose of this report. The hired component of fixed assets is present market value of the assets used by an enterprise but not owned by it.

2.9 **Working capital** : Working capital refers to the physical and financial resources used by an enterprise for its day-to-day activities. It is therefore a constantly changing entity, since resources available at a particular point of time undergo change from day to day as the enterprise functions-a part of the resources getting used up in the manufacturing process or other connected activities and replenishments being made from time to time. Physical part of the working capital includes raw materials, stores, fuel, lubricants, semi-finished products and finished products & by-

products. Financial part comprises cash in hand & at bank and net balance of amounts receivable and payable.

2.10 **Loan** : Any borrowing in cash but subsequently repaid or contracted to be repaid in cash or kind is considered as loan. Total of loans outstanding at the end of the reference year is presented here.

2.11 **Input** : The total of values of raw materials, electricity, fuel, lubricants and auxiliary materials consumed; cost of maintenance, services purchased; distributive expenses and other expenses incurred during the reference year by an enterprise is considered as total value of input.

2.12 **Output** : The sale value of products and by-products manufactured by an enterprise together with the value of services rendered to other concerns and other receipts incidental to entrepreneurial activities are considered as total value of output.

2.13 **Gross value added** : Value added represents that part of production which is the actual contribution of an enterprise to the economy. Value added is calculated by deducting total value of input from the total value of output during a reference period.

2.14 **Reference year** : In many cases small manufacturing and repair enterprises do not maintain usable books of account. In such a situation, for an enterprise maintaining books of account, reference year is the accounting year ending on a date lying within the period of 365 days prior to the date of survey. In all other cases where it is not possible to choose an accounting year as reference year, the period of 365 days immediately preceding the date of survey is taken as reference year.

CHAPTER THREE

Sample Design and Estimation Procedure

1 General

In 51st round the total number of villages and block surveyed at the national level was 13690 for the central sample. These samples were classified into two categories as "**Sample-1**" and "**Sample-2**" in both rural and urban areas. The samples of sample-1 were distributed over the four sub-rounds in equal numbers, whereas for sample-2, there was no sub-round restriction. The survey period of 51st round was July 1994 - June 1995 and the same for the four sub-rounds of sample-1 was as follows :

- Sub-round 1 : July - September, 1994
- Sub-round 2 : October - December, 1994
- Sub-round 3 : January - March, 1995
- Sub-round 4 : April - June, 1995

A stratified two-stage sampling design was adopted. The first stage units (FSUs) were the villages (panchayat wards in Kerala) in rural areas and urban blocks in urban areas. In particular, for the urban areas, enumeration blocks (EBs) were taken as FSUs where 1990 economic census (EC - 90) frame was used and NSSO urban frame survey (UFS) blocks otherwise. The second stage units (SSUs) were the manufacturing and repairing enterprises in the selected FSUs.

2 Allocation of sample FSUs between rural and urban areas

State/UT level total sample size (i.e., total number of villages and blocks to be surveyed) was allocated between rural and urban areas in proportion to population as per 1991 population census with double weightage to the urban areas. The total sample size for both rural and urban areas,

as mentioned above, was equally divided into two sample types, namely Sample-1 and Sample-2.

3 Sampling frame

For rural areas, list of villages showing number of OAMEs, NDMEs and DMEs as per 1990 economic census was used as the sampling frame for selection of FSUs, for both the sample types, in different States/UTs except Jammu & Kashmir(J & K), Arunachal Pradesh and Nicobar district of Andaman & Nicobar Islands. For the state of Kerala, however, list of Panchayat wards, giving count of OAMEs, NDMEs and DMEs at panchayat level as per 1990 economic census, was used. For Jammu & Kashmir, list of 1981 population census villages, while for Nicobar district of Andaman & Nicobar Islands, list of 1991 population census villages was used. In Arunachal Pradesh, list of villages as per 1991 population census was used as the sampling frame for selection of sample "nucleus" villages around which clusters were formed.

In urban areas, list of EBs as per 1990 economic census constituted the sampling frame for Class 1 towns (except in Jammu & Kashmir) of sample type 1 and for all towns (except J & K) of sample type 2. The list of UFS blocks was used as the sampling frame for all towns of Jammu & Kashmir and other than class 1 towns of the other states for sample type 1, and for all towns of Jammu & Kashmir only in the case of sample type 2.

4 Stratification

In rural areas, for samples of type 1 each district generally formed a separate

stratum. However for the state of Gujarat, where NSS regions cut across some district boundaries, parts (viz., groups of taluks) of each such district belonging to different NSS regions formed separate strata. If any district (or part thereof falling in an NSS region in case of Gujarat) had a smaller number of manufacturing enterprises, it was clubbed with the neighbouring district within the same NSS region to form a separate stratum to ensure a minimum allocation of 8 villages at the stratum level. Each district as a whole was always taken as a separate stratum for samples of type 2.

In the case of urban areas for samples of type 1, strata were formed within each NSS region by grouping cities/towns according to the population of the cities/towns viz., $p \leq 0.5$, $0.5 < p < 1$, $1 \leq p < 5$, $5 \leq p < 10$ and $p \geq 10$ (where p stands for 1991 census population of the town in lakhs). Each city with population 10 lakhs or more formed a separate stratum. For samples of type 2, strata were formed within each district by grouping cities/towns according to the population, viz., $p < 1$, $1 \leq p < 5$, $5 \leq p < 10$ and each city with $p \geq 10$. However, no grouping of towns was made for the states of Assam, Haryana and Pondicherry.

5 Sub-stratification

For rural samples of type 1, where 1990 EC frame was used, the FSUs in a stratum were grouped into 3 sub-strata as detailed below.

- (a) sub-stratum 1 consisting of FSUs having at least one DME;
- (b) sub-stratum 2 consisting of those of the remaining FSUs which had at least one NDME; and
- (c) sub-stratum 3 consisting of all the residual FSUs in the stratum.

There was no sub-stratification at the stratum level for the States/UTs where population census frame was used for selection of FSUs. For these States/UTs, all FSUs in a stratum were identified with sub-stratum 3 for operational convenience.

In urban areas for samples of type 1 three sub-strata were formed in class 1 towns (except for J & K) as follows :-

- (i) sub-stratum 1 consisting of EBs having at least one DME;
- (ii) sub-stratum 2 consisting of those of the remaining EBs in the stratum having at least one NDME; and
- (iii) sub-stratum 3 consisting of all the remaining FSUs in the stratum.

For other towns, including all towns of Jammu & Kashmir, two sub-strata were formed, where sub-stratum 1 consisted of all UFS blocks identified as Industrial area (IA) and the remaining UFS blocks in the stratum constituted sub-stratum 2.

For samples of type 2 stratum level sub-stratification was not done in both rural and urban areas.

6 Allocation of sample FSUs among strata and sub-strata

The total rural samples of type 1 for a State/UT were allocated to the constituent strata/sub-strata in proportion to weighted sum of the number of manufacturing enterprises of different types, as available from EC 1990, the weights being 16, 4 & 1 for DME, NDME and OAME respectively. A minimum allocation of one sample was ensured at sub-stratum level and efforts were made to make the stratum level allocations as multiples of 4 to allocate equal number of samples in each of the four sub-rounds. However, the total rural samples of type 2 for a State/UT were allocated to the constituent strata in proportion to their total number of manufacturing enterprises (weights being equal for DME, NDME & OAME) as available from EC 1990. A minimum allocation of 2 FSUs was done for each stratum.

In urban areas, for samples of type 1, allocated sample size of FSUs for a State/UT was further allocated to the

constituent strata in proportion to weighted sum of the manufacturing enterprises (in proportion to population for J & K) as was done in the rural areas. For class 1 towns (except for J & K), the stratum level FSUs were further allocated to three sub-strata again in proportion to weighted sum of the number of manufacturing enterprises in the ratio 16 : 4 : 1. The allocation at the sub-stratum level had been kept at a minimum of 2 FSUs. For other towns (including all towns of J & K) the UFS blocks of sub-stratum 1 were completely selected for survey, subject to a maximum of half of the stratum allocation of samples of a particular type; and the rest to sub-stratum 2.

The total urban samples of type 2 for a State/UT (except for J & K) was allocated to the constituent strata in proportion to their total number of manufacturing enterprises. For the state of Jammu & Kashmir stratum level allocation was done in proportion to 1981 census population.

7 Selection of first stage units (FSUs)

The sample FSUs for rural samples of type 1, at stratum x sub-stratum level, were selected with probability proportioned to size (PPS), size being the number of enterprises/population as detailed below :-

(A) For States/UT where 1990 EC frame was used, size was number of DMEs, NDMEs and OAMEs in the FSU belonging to sub-stratum 1, 2 and 3 respectively.

(B) For other States/UTs viz., (i) Arunachal Pradesh, size = 1 for each FSU (ii) Jammu & Kashmir, size = population in the FSU as per 1981 census; (iii) Nicobar district of Andaman & Nicobar, size = population in the FSU as per 1991 census.

The stratum x sub-stratum level rural samples of type 2 were selected by PPS with replacement, size being the total number of manufacturing enterprises (i.e. total of DMEs, NDMEs and OAMEs) in the FSU for the States/UTs where 1990 EC frame was used and for other States/UTs where

1990 EC frame was not used size was same as in rural samples of type 1.

In urban areas sample blocks of type 1 were selected from each sub-stratum of class 1 towns (except for J & K) with PPS with replacement taking number of DMEs, NDMEs and OAMEs in the FSU as size for sub-stratum 1, 2 & 3 respectively. For other towns (including all towns of J & K) the sample blocks from each sub-stratum were selected circular systematically with equal probability. Sample blocks of type 2 were selected with PPS with replacement, size being the total number of OAMEs, NDMEs and DMEs for all the States/UTs except J & K for which simple random sampling without replacement technique was followed for selection of sample blocks.

Both in rural and urban areas, for samples of type 1, size of an FSU of sub-stratum 3 was taken as 1 if there was no OAME or no information about number of enterprises due to incompleteness of the frame. The FSUs of sample type 2 having no manufacturing enterprises or no information about them were also considered as FSUs of size 1.

8 Hamlet-group/sub-block formation :

Large villages/blocks having approximate present (at the time of survey) population 1200 or more (600 or more for rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur & Doda districts of J & K) and/or approximate present number of non-agricultural enterprises more than 200 were divided into a suitable number (say, D) of hamlet-groups (h.g.)/sub-blocks (s.b.). The survey was conducted in two h.g./s.b.s selected from D hamlet-groups/sub-blocks in the following manner. The h.g./s.b. having maximum number of manufacturing and repairing enterprises (OAMEs, NDMEs and DMEs taken together) was always selected and allotted a serial number '0'. From the remaining h.g./s.b.s, one more h.g./s.b. was selected at random and allotted a serial number '1'. In case there was not even a single manufacturing or repairing enterprise in a large village/block, the h.g./s.b. having maximum population was selected and allotted serial number '0' and

from the remaining h.g./s.b.s another was selected at random and allotted serial number '1'. In the case of a small village/block not requiring h.g./s.b. formation, the whole village/block was treated as a h.g./s.b. bearing serial number '0'. The minimum number of h.g./s.b. formed in large villages/blocks was 4.

9 Sampling of enterprises

All OAMEs, NDMEs and DMEs which operated for at least 30 days (15 days in case of seasonal enterprises) during the last 365 days were considered for sampling. The enterprises registered under Factories Act, 1948 and Bidi and Cigar workers (condition of Employment) Act, 1966 were not considered for survey purpose.

For FSUs of sample type 2, all the eligible manufacturing and repairing enterprises listed in the village / block / h.g./s.b. were taken up for detailed survey. However, for samples of type-1, a maximum of 16 enterprises were selected for detailed enquiry.

All eligible manufacturing and repairing enterprises of different types were separately arranged by broad industry division (2-digit) codes as per NIC, 1987. This grouping of enterprises by NIC codes was done independently for each of the two selected hamlet-groups/sub-blocks for FSUs requiring hamlet-group/sub-block formation. The required number of sample enterprises were then selected circular systematically from the rearranged frame, separately for OAMEs, NDMEs and DMEs.

10 Estimation Procedure

Since the method of formation of strata for the two types of samples is different, no combined estimate can be formed at the stratum level. Sample typewise estimates can be generated at region or state or national level. The combined estimates at the level of region or state or nation are obtained for the purpose of this report by

taking a simple average of the two sets of aggregate estimates at the desired level. Ratios of the type Y/X are obtained at the last stage of estimation.

The following notations are used in the formulae for estimation :

- s = subscript for s-th stratum
- t = subscript for t-th stratum
- i = subscript for i-th sample village/block (FSU)
- j = subscript for j-th enterprise type (j = 1 for OAME; 2 for NDME; 3 for DME)
- k = subscript for k-th sample enterprise of a particular enterprise type
- D = total number of hamlet-groups / sub-blocks formed in a sample FSU
- Z = total size of a sub-stratum within a stratum (or total size of a stratum when no sub-stratification is made)
- z = FSU size used for selection
- n = number of sample FSUs surveyed for a particular sample type
- E = total number of enterprises listed for a particular enterprise type in hamlet-group / sub-block selected
- e = total number of enterprises surveyed for a particular enterprise type in the hamlet-group / sub-block
- 0/1 = subscript for hamlet-group / sub-block number('0' or '1' as the case may be)
- y = sample value of any character under estimation
- \bar{y} = estimate of population total of the character y at the desired level of aggregation.

The formula for rural samples of type 1 for all the States/UTs except for Jammu & Kashmir, Arunachal Pradesh and Nicobar district of Andaman & Nicobar Islands is as follows :

$$\bar{P} = \sum_s \sum_t Z_{st} \sum_{i=1}^{nst} \frac{1}{z_{sti}} \sum_{j=1}^3 \frac{1}{n_{stij}} \left[\frac{E_{sti0j} e_{sti0j}}{e_{sti0j}} \sum_{k=1}^{D_{sti}-1} y_{sti0jk} + (D_{sti}-1) \frac{E_{sti1j} e_{sti1j}}{e_{sti1j}} \sum_{k=1}^{D_{sti}-1} y_{sti1jk} \right] \dots \dots \dots (1)$$

The formula (1) holds good for urban samples of type 1 for class 1 towns of all the States/UTs except for Jammu & Kashmir.

For other towns of all States/UTs and for all towns of Jammu & Kashmir in the case of samples of type 1 formula (1) is used where $z_{sti} = 1$ for all $i = 1, 2, \dots, n_s$.

The formula used for estimation from the samples of type 2 for all the States/UTs (except for urban samples of J & K) is as follows :

$$\bar{P} = \sum_s Z_s \sum_{i=1}^{ns} \frac{1}{z_{si}} \sum_{j=1}^3 \frac{1}{n_{sij}} \left[\frac{E_{si0j} e_{si0j}}{e_{si0j}} \sum_{k=1}^{D_{si}-1} y_{si0jk} + (D_{si}-1) \frac{E_{si1j} e_{si1j}}{e_{si1j}} \sum_{k=1}^{D_{si}-1} y_{si1jk} \right] \dots \dots \dots (2)$$

Formula (2) is also used for rural samples of type for Jammu & Kashmir and Nicobar district of Andaman & Nicobar Islands. It may be noted that if $E = e$ as planned for sample FSUs of sample type 2, the formula(2) reduces to :

$$\bar{P} = \sum_s Z_s \sum_{i=1}^{ns} \frac{1}{z_{si}} \sum_{j=1}^3 \frac{1}{n_{sij}} \left[\sum_{k=1}^{D_{si}-1} y_{si0jk} + (D_{si}-1) \sum_{k=1}^{D_{si}-1} y_{si1jk} \right] \dots \dots \dots (3)$$

The formula for rural areas of Arunachal Pradesh is as follows :

$$\bar{P} = \sum_s Z_s \sum_{i=1}^{ns} \frac{1}{n_{sij}} \sum_{j=1}^3 \frac{E_{si0j} e_{si0j}}{e_{si0j}} \sum_{k=1}^{D_{si}-1} y_{si0jk} \dots \dots \dots (4)$$

CHAPTER FOUR

Summary of findings

4.0 : As already mentioned in Chapter One, in NSS 51st round survey attempts were made to estimate the number of enterprises, size of employment and some important characteristics, like fixed assets, working capital, loan and gross value added of the manufacturing and repairing enterprises in the unorganised sector. For this purpose, 8214 villages were surveyed in the rural areas and 5258 enumeration blocks/UFS blocks were surveyed in the urban areas. From these villages and urban blocks detailed data were collected from a total of more than 1.9 lakhs sample manufacturing and repairing enterprises, of which 1.2 lakhs(i.e., 63%) were from villages and 0.7 lakh from urban blocks.

Out of the total number of sampled enterprises, a little less than 1.5 lakhs (about 76%) were Own Account Manufacturing Enterprises (OAMEs), about 0.3 lakh (i.e., 16%) Non-Directory Manufacturing Establishments (NDMEs) and the rest Directory Manufacturing Establishment(DMEs).

4.1 Out of a total of about 1.2 lakhs rural sample enterprises, 83% were OAMEs, about 10% NDMEs and the rest DMEs. In the case of urban samples 64% were OAMEs, 25% NDMEs and the remaining DMEs. Statements 1R & 1U give state-wise number of sample enterprises by enterprise type separately for rural and urban areas.

4.2 The summary of findings of the survey on unorganised manufacture based on the data collected from the sampled enterprises are discussed below. Hereafter in this report the word enterprise will mean OAMEs, NDMEs or DMEs as the case may be. Statement 2 presents key estimates at a glance of the unorganised manufacturing sector in India for the period 1994-95.

4.3 Estimate of number of enterprises in unorganised manufacturing sector :

4.3.1 The estimate of total number of enterprises engaged in the manufacturing and repairing activities in unorganised sector, taking OAMEs, NDMEs and DMEs together, in the country during 1994 - 95 was about 145 lakhs. Of them, nearly 105 lakhs (i.e., about 72%) were in rural areas and the rest in urban areas. Statements 3R & 3U give state-wise estimates of OAMEs, NDMEs and DMEs separately for rural and urban areas. It is seen from these Statements that out of the total estimated enterprises, about 84% were OAMEs, 11% NDMEs and the rest DMEs. It means that about 84% of the total unorganised manufacturing and repairing enterprises in India during 1994-95 did not employ any hired worker on a fairly regular basis and the remaining enterprises employed at least one hired worker on a fairly regular basis during a reference period of one year. In each of about 11% of the total enterprises, there were 5 or less number of workers including at least one hired worker on a fairly regular basis. Each of around 5% of the total enterprises had 6 or more workers including at least one hired worker on a fairly regular basis. Out of the total enterprises employing at least one hired worker on a fairly regular basis(i.e. out of the total establishments), in about 71% cases total number of workers (total of hired and other workers on a fairly regular basis) did not cross 5 each.

4.3.2 For the country as whole, out of a total of about 122 lakhs OAMEs, 78% were in rural areas. Out of a total of about 16 lakhs NDMEs, 42% were in rural areas and the rest in urban areas. 45% of the total of little more than 6 lakhs DMEs in the country were in rural areas and the rest in urban areas. In other words, as expected, the proportion of small manufacturing and repairing enterprises managed without engaging any hired worker on a fairly regular basis was much higher in rural areas than in urban areas. The proportion of relatively larger manufacturing units run with the help of at least one hired worker was less in rural areas than in urban areas.

4.3.3 Among the total of 105 lakhs rural enterprises in the country about 91% were OAMEs, 6% NDMEs and the rest DMEs. 68% of the total enterprises located in the urban areas of the country were OAMEs, 23% NDMEs and 9% DMEs. This shows that about 91% of the rural enterprises, during 1994-95, were run without help of any hired worker and in urban areas the corresponding percentage was 68.

4.3.4 Among the states, Uttar Pradesh had the highest number of rural enterprises followed by West Bengal, Orissa, Bihar. Considering OAMEs, NDMEs and DMEs together, these four states together covered about 55% of the total rural enterprises in the country. In the case of urban areas also Uttar Pradesh had the highest number of enterprises, followed by Tamil Nadu, Maharashtra and Gujarat. These four states together covered about 50% of the total urban enterprises in the country.

4.3.5 In rural areas Karnataka had the highest number of DMEs, followed by Uttar Pradesh, Andhra Pradesh and Tamil Nadu. In urban areas Maharashtra had the highest number of DMEs, followed by Gujarat, Tamil Nadu and Uttar Pradesh.

'O + N' means OAME + NDME

4.3.6 Statements 4R & 4U give number of estimated enterprises, by type of enterprise, in different industries (at 2 digit NIC code) at the national level separately for rural and urban areas. Information available in these Statements shows that for all types of

enterprises taken together, 'Wood and wood products industry (NIC-27)' had the highest share in the rural areas, followed by 'Food products (NIC-20)', 'Beverages, tobacco etc. (NIC-22)' and 'Repair services (NIC-97)'. Wood and wood products industry had the highest number of OAMEs, while the highest number of NDMEs and DMEs both had come from the Food products industry in the rural areas. In the urban areas also 'Wood and wood products' industry had a

significant share among the different manufacturing industries. The proportions of DMEs were more in the 'Textile products

(NIC-26)' and 'Metal products and parts (NIC-34)' than in other industries in the urban areas.

4.3.7 Statements 5R & 5U give number of enterprises in all the states according to the Economic Census, 1980(EC-80) and Economic Census, 1990(EC-90) and the estimated number of enterprises according to 45th (1989-90) and 51st (1994-95) rounds of NSS separately for rural and urban areas. It is observed from these Statements that the estimate for number of enterprises for all states (excepting Jammu & Kashmir because geographical coverage of Jammu & Kashmir was not same in 45th and 51st rounds) and all types of enterprises taken together in 1994-95 was about 13% less than the estimated number of enterprises in 1989-90 in the case of rural areas. The estimate for the urban areas suggested a marginal increase during 1994-95 over the estimated enterprise in 1989-90. For rural and urban combined, estimate in 1994-95 was about

10% less than the estimate in 1989-90. The same trend is observed in the information thrown up by the Economic Census undertaken in 1980 and 1990. The Total number of enterprises (excepting Jammu & Kashmir because EC-90 was not conducted in this state) according to EC-90 was less than the same according to EC-80 both in the rural and urban sectors. The fall was about 9% of the total number of enterprises according to EC-80 in each of the rural and urban sectors.

4.3.8 To facilitate the industry-wise comparison at the national level industry-wise total estimated number of enterprises according to 45th (1989-90) round and 51st(1994-95) round of NSS are given in the Statements 6R & 6U separately for rural and urban areas.

Statement 5R : Estimated number of enterprises(in '00) according to EC-1980, EC-1990, 45th and 51st rounds of NSS in rural areas of different states

4.4 Size of Employment in unorganised manufacturing sector :

4.4.1 Estimated size of the total employment in the unorganised manufacturing sector in India during 1994-95 (NSS 51st round) was about 332 lakhs. Out of these total number of persons employed, a little more than about 221 lakhs (approximately 67%) were engaged in the enterprises located in the Indian villages and the rest in urban areas. State-specific estimates of the number of persons employed in OAMEs, NDMEs and DMEs separately are listed in Statements 7R & 7U separately for rural and urban areas. Out of the total employed in the unorganised manufacturing sector during 1994-95, about 68% were engaged in the enterprises managed without any hired worker on a fairly regular basis (i.e., in OAMEs); a little less than 15% were engaged in the

enterprises each of which was run with a total of 5 or less workers(including at least one hired worker (i.e., in NDMEs)) and the rest were employed in the relatively larger establishments (i.e., in DMEs) each of which was run with a total of 6 or more workers(including at least one hired worker).

4.4.2 The estimate of number of persons employed in OAMEs was about 227 lakhs, of which nearly 79% were in the villages and the rest in urban areas. Out of the 49 lakhs employed in NDMEs, only 37% were in rural areas and the rest in urban areas. Out of the total 56 lakh persons employed in the relatively larger enterprises (i.e., in DMEs), only 43% were in rural areas and the rest in urban areas.

4.4.3 During 1994-95 nearly 81% of the total number of persons employed in the

enterprises located in rural India were in OAMEs, about 8% in NDMEs and the rest in DMEs. The corresponding percentages in urban areas for OAMEs, NDMEs, and DMEs were 43, 28 and 29 respectively.

4.4.4 Among the states, Uttar Pradesh had the highest number of persons employed in unorganised manufacturing sector during 1994-95 in the rural as well as urban areas, which was in conformity with the highest estimated number of enterprises both in the rural and urban areas as observed in para

4.3.4. Uttar Pradesh, West Bengal, Orissa and Bihar together covered about 57% of the

total number of persons employed in the informal manufacturing sector in rural areas; while about 54% of the total employed in urban areas were covered by the states of Uttar Pradesh, Tamil Nadu, Maharashtra and Gujarat.

4.4.5 If the number of persons employed only in DMEs are considered, Uttar Pradesh had the highest in rural areas followed by Karnataka, Tamil Nadu and West Bengal. In the urban areas Maharashtra had the highest number of persons employed in DMEs, followed by Gujarat, Tamil Nadu and Delhi.

Statement 8 : Estimated total manufacturing sector employment (in millions) in India from two different sources				
1993 - 94		1994 -95		
sector	based on projected population**	unorganised sector ^{\$} (NSS 51st round)	registered sector (Annual Survey of Industries)*	total
(1)	(2)	(3)	(4)	(5)
rural	20.7	22.1	2.5	24.6
urban	19.5	11.1	5.7	16.8
total	39.3	33.2	8.2	41.4

* Source : Summary results for Factor Sector - Annual Survey of Industries : 1994-95. Srinagar Region of Jammu & Kashmir was not covered.

** Total of column (2) entries does not match with the column(2) total entry, because total is obtained from combined WPR of NSS 50th round employment-unemployment survey.

\$ Incomplete coverage of Jammu & Kashmir, please see para 1.8

4.4.6 Statement 8 provides estimated total manufacturing sector employment from two different sources. It may be noted that the registered sector employment given in Statement 8 includes bidi industry workers. The estimates of total manufacturing sector employment for the year 1993-94 are obtained from the projected population for the year 1993-94 and using worker (in terms of usual status) population ratios(WPR) for manufacturing sector from NSS 50th round employment - unemployment survey.

4.4.7 Statements 9R & 9U present total number of persons employed in unorganised manufacturing sector in all the states according to the Economic Census, 1980(EC-80), Economic Census, 1990(EC-90) and estimates of the total employed according to NSS 45th (1989-90) round and 51st (1994-95) round separately for rural and urban areas. It is seen from these Statements that the estimate of the total number of persons employed in unorganised manufacturing sector in the rural India (excluding Jammu & Kashmir, since geographical coverage of Jammu & Kashmir was not same in 45th and 51st rounds) during 1994-95 (51st round) was little more than 8% less than the estimated number of persons employed during 1989-90 (45th round). The estimates of employment in urban India suggested a

little less than 2% increase during 1994-95 over the estimated number of persons employed in urban areas during 1989-90. For rural and urban combined, the fall in estimated employment during 1994-95 was around 5% of the total rural and urban employment during 1989-90.

4.4.8 The employment in unorganised manufacturing sector according to EC-90 had registered a sizable increase in rural areas and a moderate increase in urban areas in comparison to employment in EC-80. In rural areas EC-90 employment for all types of enterprises taken together (excluding Jammu & Kashmir, because EC-90 was not conducted in Jammu & Kashmir) was about 13% more than the employment in EC-80, as against about 6% in urban areas. Note that this increase in employment in EC-90 compared to EC-80 had been observed despite significant fall (by 9%) in the total number of enterprises in EC-90 in comparison to EC-80 both in the rural and urban areas (see para 4.3.7).

4.4.9 Industry-specific estimates of employment according to 45th(1989-90) and 51st(1994-95) rounds of NSS are given in the Statements 10R & 10U separately for rural and urban areas.

* 'All' figures of this Statement do not tally with the corresponding entries of Statement 9U, because Jammu & Kashmir is not included in the 'All' row of Statement 9U.

4.5 Employment by type of workers :

4.5.1 In the NSS enterprise surveys upto 45th round (1989-90), the persons employed in the OAMEs and NDMEs were divided into two categories : hired and others. The paid household workers were also included

in the hired category. But in the 51st round(1994-95) enterprise survey, since DMEs were also included, persons employed were first categorised as **'work-**

ers' and **'other workers'** (i.e., other than 'workers')' depending on their direct involvement in the manufacturing process or not. Persons directly involved in or associated with the manufacturing process were termed 'workers' and the rest 'other workers'. **'Workers'** were further classified as hired workers, paid household workers and unpaid household workers. That means, in the present report the term "direct workers" refers to the total of hired workers, paid household workers and unpaid household workers.

4.5.2 Statements 11R & 11U present distribution of workers by type of workers in

each of the industries (at 2-digit NIC code level) separately for rural and urban areas. It is seen from these Statements that out of a total of about 332 lakhs persons employed in the unorganised manufacturing sector in India during 1994-95, about 186 lakhs (i.e., 56%) were directly involved in or associated with the manufacturing process, and the rest were other workers. Percentage of direct workers was lower in rural areas (53) than in urban areas(62).

4.5.3 Out of 221 lakhs persons employed in rural areas, about 12% were hired

workers, less than 1% paid household workers, about 40% unpaid household workers, as against 37%, 1% and 23% respectively, out of a total of nearly 111 lakhs persons employed in urban areas. Among the industries, the proportions of hired workers were high in the 'manufacture of food products, NIC-20(17%)' and 'Non-metallic mineral products, NIC-32 (21%)' in the rural areas. More than 50% of the total employed were hired workers in 'Textile products, NIC-26' and 'Metal products and parts, NIC-34' in urban areas.

4.6 Employment by sex :

4.6.1 According to the estimates obtained from the 51st round (1994-95) enterprise survey, out of a total of 332 lakhs persons employed in unorganised manufacturing sector in India, little more than 103 lakhs (about 31%) were females and the rest males. Statements 12R & 12U give number of males and females engaged in OAMEs, NDMEs and DMEs in different industries at 2-digit level of NIC code separately for rural and urban areas.

It is seen from Statements 12R & 12U that nearly 81% of the total females employed in the unorganised manufacturing sector in 1994-95 were engaged in the enterprises located in the rural areas and the rest in the enterprises located in the urban areas. Out of a total of 229 lakhs males, about 60% were engaged in the rural enterprises and the rest in the urban enterprises. Out of total females employed, 10% were in DMEs, 4% in NDMEs and the rest in OAMEs. The total number of females employed in OAMEs was 89 lakhs, of which about 84% were in the enterprises located in rural areas, as against 59% in the case of NDMEs, out of a total 4 lakhs employed in NDMEs and 68% in the case of DMEs, out of total 10 lakhs employed in DMEs.

4.6.2 Per thousand distribution of workers by sex for each category of workers (viz., hired workers, paid household workers, unpaid household workers, other workers and total workers) in each industry (at 2 digit level of NIC) are given separately for rural and urban areas in Statements 13R & 13U for all types of enterprises taken together. These Statements help in studying female participation in unorganised manufacturing activities. It is observed that female participation in unorganised manufacturing activities was much more in rural areas than in urban areas. For all types of enterprises and all industries taken together, there were 378 females per thousand of total workers in the enterprises located in rural areas, as against only 175 females per thousand of total workers in the enterprises located in urban areas (please see Statements 13R & 13U). In fact, number of females per thousand of total number of persons employed was more in rural areas than in urban areas for each

category of workers, namely : hired workers, paid household workers, unpaid household workers and other workers separately. As expected, among different category of workers, number of females per thousand of total workers was the highest in "unpaid household" category in the rural as well as urban areas. In general, number of females per thousand of total employed was less in DMEs and NDMEs than in OAMEs both in rural and urban areas(see Statements 12R & 12U).

4.6.3 From Statements 13R & 13U, it is observed that number of females per thousand of total workers was moderately high in some of the industries. The highest was reported for 'Jute and other textile (NIC-25)' in rural as well as urban areas, followed by 'Chemical and chemical-products(NIC-30)' in rural areas and 'Beverages, tobacco, etc.(NIC-22)' in the urban areas.

4.6.4 Per thousand distribution of workers by sex in each category of workers for each state for all types of enterprises taken together are given in Statements 14R & 14U separately for rural and urban areas.

4.6.5 Statement 15 presents percentage of female workers in OAMEs, NDMEs and DMEs separately, according to 45th and 51st rounds of NSS for each of the rural and urban areas (Jammu & Kashmir is included here in both 45th and 51st rounds results, though geographical coverage was not same for Jammu & Kashmir in these two rounds). It is observed from this Statement that there was not much change in the percentage of female workers between 45th (1989-90) and 51st (1994-95) rounds of NSS, except in the OAMEs located in the urban areas, where percentage had gone down from 37 to 30.

*** Estimated number of enterprises and number of persons employed by type of worker (i.e., full-time, part-time) and sex for each category of workers and number of workers per enterprise are given in the Appendix Tables 1R & 1U and 2R & 2U at 3 digit level of NIC with sub-total at 2-digit level for each of OAMEs, NDMEs and DMEs separately. Industry-wise distribution of the estimated enterprises by the number

of persons employed in these enterprises are also given in Appendix Tables 3R & 3U for

OAMEs and NDMEs and in Appendix Tables 4R & 4U for DMEs.

4.7 Gross value added :

4.7.1 The survey on manufacturing enterprises in the unorganised sector in 51st round of NSS reveals that the contribution of this sector, in terms of value added, to the national economy during 1994-95 was about Rs. 32275 crores, out of which little more than 41% (about Rs.13244 crores) was from the enterprises located in rural areas and the rest from the enterprises located in urban areas. Statement 16 shows the percentage distribution of gross value added by different industries (at 2-digit NIC code level) in rural and urban areas separately. Hereafter in this report 'value added' will mean 'gross value added'. It is seen from this Statement that the 'Manufacture of food products industry (NIC 20 & 21 taken together)' alone covered more than one-fifth (about 22%) of the total value added from the all industries taken together in rural India and little more than 10% in urban India. The 'Wood and Wood-products industry (NIC-27)' had covered more than 17% of the total value added in rural areas and 9% in urban areas. The contribution of 'Repair services (NIC-97)' was also high both in the rural (about 8%) and urban (about 13%) areas. In fact the four

industries, namely : 'Food and food-products (NIC 20 & 21 both together)', 'Wood and Wood-products (NIC 27)', 'Non-metallic mineral products (NIC-32)' and 'Repair services (NIC 97)' together covered about 59% of the total value added in rural India and about 35% of the total value added in urban India.

(Hereafter, in this report, wherever 45th and 51st round results are compared, it may be noted that Jammu & Kashmir is included, though geographical coverage was not same for Jammu & Kashmir in 45th and 51st rounds.)

4.7.2 Statement 17 presents percentage distribution of value added by different states separately for rural and urban areas. It is seen from this Statement that the share of Uttar Pradesh alone was about one-fifth of the total value added from the unorganised rural manufacturing and repairing enterprises in India. West Bengal, Tamil Nadu and Bihar contributed about 13%, 10% and 9% of the total value added from the rural unorganised manufacturing sector for the country as a whole. In the case of urban areas, Maharashtra alone contributed little less than one-fifth of the total urban sector value added, while Gujarat (13%), Uttar Pradesh (12%), Tamil Nadu (12%) and Delhi (8%) also made substantial contribution.

Statement 16 : Percentage distribution of gross value added by industries separately for rural and urban areas

4.7.3 Value added per enterprise and value added per worker for different industries according to 45th(1989-90) and 51st (1994-95) rounds of NSS are given for OAMEs in the Statements 18R & 18U, for NDMEs in the Statements 19R & 19U and for DMEs in the Statements 20R & 20U separately for

rural and urban areas. For calculation of value added per worker in this report, all workers of different categories have been considered. It is seen from these Statements that for all industries taken together, the per enterprise estimate of gross value added (GVA) as obtained in 51st round was higher

in the case of NDMEs than that of OAMEs both in rural and urban areas. This was a normal phenomenon, because the NDMEs were the larger units as compared to OAMEs. For the same reasons, for all industries taken together, per enterprise GVA in DMEs was higher than the per enterprise GVA in NDMEs both in rural and urban areas. Further, the per enterprise estimates of value added were higher in urban areas than in rural areas for OAMEs, NDMEs and DMEs. In general, the estimated GVA per enterprise was significantly higher in 1994-95 than in 1989-90 both in rural and urban areas for OAMEs, NDMEs and DMEs. This holds good for individual industries (at 2-digit NIC level), except for few cases, as well as for all industries taken together.

4.7.4 Estimated GVA per enterprise and GVA per worker in different states for rural as well as urban sectors according to 45th(1989-90) and 51st(1994-95) rounds of NSS are also given in the Statements 21R & 21U, Statements 22R & 22U and Statements 23R & 23U for OAMEs, NDMEs and DMEs respectively.

4.7.5 Labour Productivity : Value added per worker provides a rough measure of the productivity of labour utilisation in different industries. Of course here worker means total of all categories of workers. As mentioned in para 4.7.3 Statements 18R & 18U, 19R & 19U and 20R & 20U provide estimates of value added per worker in 1989-90 and 1994-95 for OAMEs, NDMEs and DMEs respectively in different industries.

4.7.6 It is seen from the Statement 18R that in the case of OAMEs located in rural areas, among the industries (at 2-digit NIC level), the 'Transport equipment and parts (NIC-37)' industry had the highest productivity of labour (Rs.9346 per year) during 1994-95. 'Repair services, NIC-97 (Rs.8791)', 'Repair of capital goods, NIC-39 (Rs.8100)' and 'Machinery and equipment, NIC-36 (Rs.8971)' had also substantially high productivity of labour. In the case of OAMEs located in urban areas (see Statement 18U) 'Basic metal & alloys industry, NIC-33 (Rs.18849 per year)' had the highest labour productivity, followed by 'Machinery and equipment, NIC-35

(Rs.17436)', 'Repair of capital goods, NIC-39 (Rs.15486)', 'Other manufacturing industries, NIC-38 (Rs.15447)'.

4.7.8 As expected, labour productivity was higher in urban OAMEs than in rural OAMEs in different industries in general, and in particular, for all industries taken together the productivity in urban OAMEs was more than double the productivity of rural OAMEs. The substantial amount of increase in labour productivity was observed in OAMEs during 1994-95 as compared to 1989-90 in different industries both in the rural and urban areas.

4.7.9 It is observed from Statement 19R that the "Rubber, plastic and petroleum industry, NIC-31 (Rs.15964/- per year)" had the highest labour productivity among the industries in the case of rural NDMEs, followed by "Leather and leather products, NIC-29 (Rs.14879)" and "Beverages, tobacco, etc. NIC-22 (Rs.14827)". "Transport equipment and parts, NIC-37(Rs.32014)" had the highest labour productivity, among the industries (at 2 digit level), in the case of urban NDMEs, followed by "Wood and Wood-products, NIC-27 (Rs.26039)" and "Rubber, plastic and petroleum, NIC-31 (Rs.25780)" (see Statement 19U). For all industries taken together, value added per worker for rural NDMEs was Rs.10683 as against Rs.18662 in the case of urban NDMEs. In general, labour productivity for different industries was higher in urban areas than in rural areas.

4.7.10 The productivity of labour had shown significant increase during 1994-95 in comparison to the labour productivity in 1989-90 for NDMEs both in the rural and urban areas. For all industries taken together, per worker value added in the case of rural NDMEs during 1994-95 was Rs.10683 as against Rs.5942 in 1989-90. The corresponding figures for urban areas were Rs.18662 and Rs.11998 in 1994-95 and 1989-90 respectively.

4.7.11 Similar increase was also reported in the case of relatively larger manufacturing and repairing enterprises (i.e. DMEs). It may be seen from Statement 20R & 20U

that the estimates of value added per worker had registered noteworthy increase during 1994-95 in comparison to value added per worker in 1989-90 in DMEs. For all industries taken together, during 1989-90 for DMEs located in rural areas the estimate was Rs.5804 per year, as against Rs.11586 per year in 1994-95. The estimates for urban DMEs were Rs.13711 and Rs.24958 per year for 1989-90 and 1994-95 respectively.

4.7.12 Estimated value added per worker in different states for the rural as well as the urban sectors, according to 45th(1989-90)

and 51st(1994-95) rounds of NSS, are also given in the Statements 21R & 21U, 22R & 22U and 23R & 23U for OAMEs, NDMEs and DMEs respectively.

*** The per enterprise estimates of input by items of input and estimates of output by items of output are given in the Appendix Tables 6R & 6U and Tables 7R & 7U respectively at 3 digit NIC level with sub-total at 2 digit level. The estimates of gross value added per enterprise and per worker value added are given in the Appendix Tables 5R & 5U.

Number of sample enterprises given in col(2) are of 51st. round

4.8 Structural ratios : Statements 24R & 24U give industry-wise some important structural ratios, viz.

- (i) ratio of output to employment
- (ii) ratio of output to fixed assets
- (iii) ratio of gross value added to fixed assets
- (iv) ratio of gross value added to employment
- (v) ratio of gross value added to output and
- (vi) ratio of fixed assets to employment

for all types of enterprises (i.e. for OAMEs, NDMEs and DMEs) taken together separately for rural and urban areas.

4.8.1 It is seen from the Statement 24R that the ratio of value added to output for all types of industries taken together varies from 0.16 for 'Basic metal & alloys industries(NIC-33)' to 0.75 for 'Repair of capital goods (NIC-39)' in rural areas. Statement 24U shows that the same ratio for the enterprises located in urban areas varies from 0.19 for 'Manufacture of food products(NIC-21)' to 0.64 for 'Repair services(NIC-97)'. It is also seen that ratio of value added to output was higher in general in rural areas than in urban areas in different industries. For all industries taken together the ratio was 0.45 in the rural sector, as against 0.38 in the urban areas.

4.8.2 Coming to the ratio of value added to fixed assets (total of owned and hired fixed assets) , it is seen that the ratio was higher in rural areas(0.52) than in urban areas(0.81) for all industries taken together. In rural areas the ratio of value added to fixed assets was the highest(1.44) for 'Jute and other textiles(NIC-25)' and the lowest(0.45) for 'Paper and paper-products (NIC-28)'. In the case of urban areas also the highest(1.46) and the lowest(0.35) ratios were observed for 'Jute and other textiles(NIC-25)' and 'Paper and paper-products (NIC-28)' respectively.

4.8.3 The value of fixed asset per worker was markedly higher(Rs.32873) in urban areas than in rural areas(Rs. 7216) for all industries and all types of enterprises taken together.

4.9 Other important parameters : In the Statement 25 aggregate values (Rs. in crores) of input, output, gross value added, fixed assets, working capital and loan are given separately for rural and urban areas for each of OAMEs, NDMEs and DMEs during 1989-90 (45th round) and 1994-95 (51st round). The per enterprise estimates(in Rs.) of input, output, gross value added, working capital (opening balance, closing balance and net-balance), fixed assets, loan and also value added per worker are given in the Appendix Table 5R & 5U at 3 digit level of NIC with sub-total at 2 digit level separately for OAMEs, NDMEs and DMEs.

Statement 24R : Some important ratios at industry(2 digit NIC) level in the informal manufacturing sector in rural areas

CHAPTER FIVE

Industry division / group codes and descriptions

Group	Description
Division 20-21: MANUFACTURE OF FOOD PRODUCTS	
200	Slaughtering, preparation and preservation of meat
201	Manufacture of dairy products
202	Canning and preservation of fruits and vegetables
203	Processing, canning and preserving of fish, crustacea and similar foods
204	Grain milling
205	Manufacture of bakery products
206	Manufacture and refining of sugar(vacuum pan sugar factories)
207	Production of indigenous sugar, 'boora', 'khand-sari', 'gur', etc. from sugarcane, palm juice, etc.
208	Production of common salt
209	Manufacture of cocoa products and sugar confection-ery (including sweetmeats)
210	Manufacture of hydrogenated oils and vanaspati ghee etc.
211	Manufacture of vegetable oils and fats (other than hydrogenated)
212	Manufacture of animal oils and fats; manufacture of fish oil
213	Processing and blending of tea including manufacture of instant tea
214	Coffee curing, roasting, grinding and blending, etc. including manufacture of instant coffee
215	Processing of edible nuts
216	Manufacture of ice
217	Manufacture of prepared animal and bird feed

Group	Description
218	Manufacture of starch
219	Manufacture of food products not elsewhere classified (n.e.c)
DIVISION 22 : MANUFACTURE OF BEVERAGES, TOBACCO AND RELATED PRODUCTS	
220	Distilling, rectifying and blending of spirits; ethyl alcohol production from fermented materials
221	Manufacture of wines
222	Manufacture of malt liquors and malt
223	Production of country liquor (arrack & toddy etc.)
224	Manufacture of soft drinks and syrups
225	Tobacco stemming, redrying and all other operations connected with preparing raw leaf tobacco
226	Manufacture of bidi
227	Manufacture of cigars, cigarettes, cheroots, and cigarette tobacco
228	Manufacture of 'snuff', 'zarda', chewing tobacco and other tobacco products n.e.c. (except panmasala containing tobacco)
229	Manufacture of pan-masala, catechu ('kattha') and chewing lime
230	Cotton ginning, cleaning and baling
231	Cotton spinning other than in mills (charkha)
232	Weaving and finishing of cotton khadi
233	Weaving and finishing of cotton textiles on handlooms
234	Weaving and finishing of cotton textiles on powerlooms
235	Cotton spinning, weaving and processing in mills

Group	Description
236	Bleaching, dyeing and printing of cotton textiles (not self-produced cotton textiles)
DIVISION 24 : MANUFACTURE OF WOOL, SILK AND MAN-MADE FIBRE TEXTILES	
240	Preparation of raw wool, silk and artificial/syn- thetic textile fibres for spinning
241	Wool spinning, weaving and finishing other than in mills
242	Wool spinning, weaving and processing in mills
243	Bleaching and dyeing of woollen textiles
244	Spinning, weaving and finishing of silk textiles other than in mills
245	Spinning, weaving and processing of silk textiles in mills
246	Bleaching, dyeing and printing of silk textiles
247	Spinning, weaving and processing of man-made textile fibres
248	Bleaching, dyeing and printing of artificial/syn- thetic textile fabrics
DIVISION 25 : MANUFACTURE OF JUTE AND OTHER VEGETABLE FIBRE TEXTILES (EXCEPT COTTON)	
250	Jute and mesta pressing and baling
251	Preparatory operations (including carding and combing) on jute and mesta fibres
252	Preparatory operations (including carding and combing) on coir fibres
253	Preparatory operations (including carding and combing) on sann hemp and other vegetable fibres n.e.c.
254	Spinning, weaving and finishing of jute and mesta textiles

Group	Description
255	Spinning, weaving and finishing of coir textiles
256	Spinning, weaving and finishing of sann hemp and other vegetable fibre textiles n.e.c.
257	Bleaching, dyeing and printing of jute and mesta textiles
258	Bleaching, dyeing and printing of coir textiles
259	Bleaching, dyeing and printing of other vegetable fibre textiles n.e.c.
<u>DIVISION 26 : MANUFACTURE OF TEXTILE PRODUCTS</u> (INCLUDIKNG WEARING APPAREL)	
260	Manufacture of knitted or crocheted textile products
261	Manufacture of all types of threads, cordage, ropes, twines and nets, etc.
262	Embroidery work, zari work and making of ornamental trimmings
263	Manufacture of blankets, shawls, carpets, rugs, and other similar textile products
264	Manufacture of floor coverings of jute, mesta sann-hemp and other kindred fibres and of coir
265	Manufacture of all types of textile garments and clothing accessories (from not self-produced material) n.e.c.
266	Manufacture of rain coats, hats, caps and school bags etc. from waterproof textile fabrics or plastic sheetings
267	Manufacture of made-up textile articles; except apparel
268	Manufacture of waterproof textile fabrics
269	Manufacture of textiles/textile products not elsewhere classified like linoleum, padding, wadding, upholstering and filling, etc.

Group	Description
<u>DIVISION 27 : MANUFACTURE OF WOOD AND WOOD PRODUCTS; FURNITURE AND FIXTURES</u>	
270	Sawing and planing of wood (other than plywood)
271	Manufacture of veneer sheets, plywood and their products
272	Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors and windows (excluding hewing and rough shaping of poles, bolts and other wood material which is classified under logging)
273	Manufacture of wooden and cane boxes, crates, drums, barrels and other containers, baskets and other wares made entirely or mainly of cane, rattan, reed, bamboo, willow, fibres, leaves and grass
274	Manufacture of wooden industrial goods n.e.c.
275	Manufacture of cork and cork products
276	Manufacture of wooden furniture and fixtures
277	Manufacture of bamboo and cane furniture and fixtures
279	Manufacture of products of wood, bamboo, cane, reed and grass (including articles made from coconut shells etc.) n.e.c.
DIVISION 28 : MANUFACTURE OF PAPER AND PAPER PRODUCTS AND PRINTING, PUBLISHING & ALLIED INDUSTRIES	
280	Manufacture of pulp, paper and paper board including manufacture of newsprint
281	Manufacture of containers and boxes of paper or paper board
282	Manufacture of paper and paper board articles and pulp products not elsewhere classified(n.e.c.)
283	Manufacture of special purpose paper whether or not printed n.e.c.
284	Printing and publishing of newspapers

Group	Description
285	Printing and publishing of periodicals, books, journals, directories, atlases, maps, sheet music, schedules & pamphlets, etc.
286	Printing of bank notes, currency notes, postage stamps, security passes, stamp papers and other similar products
287	Engraving, etching, and block-making etc.
288	Book binding on account of others
289	Printing and allied activities not elsewhere classified
<u>DIVISION 29 : MANUFACTURE OF LEATHER AND PRODUCTS OF LEATHER, FUR & SUBSTITUTES OF LEATHER</u>	
290	Tanning, curing, finishing, embossing and japaning of leather
291	Manufacture of footwear (excluding repair) except of vulcanized or moulded rubber or plastic
292	Manufacture of wearing apparel of leather and substitutes of leather
293	Manufacture of consumer goods of leather and substitutes of leather; other than apparel and footwear (Note: Manufacture of school bags and travelling accessories from waterproof textile fabrics is included in group 266)
294	Scrapping, currying, tanning, bleaching and dyeing of fur and other pelts for the trade
295	Manufacture of wearing apparel of fur and pelts
296	Manufacture of fur and skin rugs and other similar articles
299	Manufacture of leather and fur products n.e.c.

Group	Description
DIVISION 30 : MANUFACTURE OF BASIC CHEMICALS AND CHEMICAL PRODUCTS (EXCEPT PRODUCTS OF PETROLEUM AND COAL)	
300	Manufacture of industrial organic and inorganic chemicals (manufacture of chemicals for laboratory and technical uses is classified in group 309)
301	Manufacture of fertilizers and pesticides
302	Manufacture of plastics in primary forms; manufacture of synthetic rubber
303	Manufacture of paints, varnishes, and related products; artists' colours and ink
304	Manufacture of drugs, medicines & allied products
305	Manufacture of perfumes, cosmetics, lotions, hair dressings, toothpastes, soap in any form, detergents, shampoos, shaving products, washing and cleaning preparations and other toilet preparations
306	Manufacture of man-made fibres
307	Manufacture of matches
308	Manufacture of explosives; ammunition and fireworks
309	Manufacture of chemical products not elsewhere classified
DIVISION 31: MANUFACTURE OF RUBBER, PLASTIC, PETROLEUM AND COAL PRODUCTS; PROCESSING OF NUCLEAR FUELS	
310	Tyre and tube industries
311	Manufacture of footwear made primarily of vulcanised or moulded rubber and plastics
312	Manufacture of rubber products not elsewhere classified
313	Manufacture of plastic products not elsewhere classified

Group	Description
314	Manufacture of refined petroleum products (this group includes production of liquids of gaseous fuels, illuminating oils, lubricating oils or greases or other products obtained from curde petroleum or their fractionation productions. Liquification of natural gas is classified in group 111 and bottling of natural gas or liquified petroleum gas is classified in group 315)
315	Bottling of natural gas or liquified petroleum gas
316	Manufacture of refined petroleum products n.e.c. (this group includes manufacture of variety of products extracted/obtained from the products or residues of petroleum refining)
317	Processing of nuclear fuels (this group includes extraction of uranium metals from pitch blende or other uranium bearing ores; manufacture of alloys or dispersions or mixtures of natural uranium or its compounds; manufacture of enriched uranium and its compounds; plutonium and its compounds; uranium depleted in U 235 and its compounds; thorium and its compounds; other radio active elements, isotops or compounds and non-irradiated fuel elements for use in nuclear reactors. Production of heavy water is classified in group 309)
318	Manufacture of coke oven products (this group includes operation of coke ovens chiefly for the production of coke or semi-coke from hard-coal and lignite, retort carbon and residual products such as coal tar or pitch. Agglomeration of coke is included. Distillation of coal tar is classified in group 319)
319	Manufacture of other coal and coal tar products not elsewhere classified
DIVISION 32 : MANUFACTURE OF NON-METALIC MINERAL PRODUCTS	
320	Manufacture of refractory products and structural clay products
321	Manufacture of glass and glass products
322	Manufacture of earthen and plaster products
323	Manufacture of non-structural ceramic ware

Group	Description
324	Manufacture of cement, lime and plaster
325	Manufacture of mica products
326	Stone dressing and crushing; manufacture of structural stone goods and stone ware
327	Manufacture of asbestos cement and other cement products
329	Manufacture of miscellaneous non-metallic mineral products not elsewhere classified
DIVISION 33 : BASIC METAL AND ALLOYS INDUSTRIES	
330	Manufacture of iron and steel in primary/semi-finished forms
331	Manufacture of semi-finished iron and steel products in re-rolling mills, cold-rolling mills and wire-drawing mills
332	Manufacture of ferro-alloys
333	Copper manufacturing
334	Brass manufacturing
335	Aluminium manufacturing
336	Zinc manufacturing
337	Costing of metals
338	Processing/Re-rolling of metal scraps other than iron and steel scraps (Note: Re-rolling of iron and steel scraps is included in group 330)
339	Other non-ferrous metal industries
DIVISION 34 : MANUFACTURE OF METAL PRODUCTS AND PARTS, EXCEPT MACHINERY AND EQUIPMENT	
340	Manufacture of fabricated structural metal products
341	Manufacture of fabricated metal products not elsewhere classified

Group	Description
342	Manufacture of furniture and fixtures primarily of metal
343	Manufacture of hand tools, weights and measures and general hardware
344	Forging, pressing, stamping and roll-forming of metal; powder metallurgy. (This group includes production of a wide variety of finished or semi-finished metal products by means of the above activities which, individually, would be characteristically produced in other activity categories)
345	Treatment or coating of metals; general mechanical engineering on a sub-contract basis. (This group includes plating, polishing, anodising, engraving, printing, hardening, buffing, deburring, sand blasting, welding or other specialised operations on metals on a fee or contract basis. The units classified here, generally, do not take ownership of the goods nor do they sell them to third parties)
346	Manufacture of metal cutlery, utensils and kitchenware
349	Manufacture of metal products (except machinery and equipment) not elsewhere classified
DIVISION 35 - 36 : MANUFACTURE OF MACHINERY AND EQUIPMENT OTHER THAN TRANSPORT EQUIPMENT	
350	Manufacture of agricultural machinery and equipment and parts thereof
351	Manufacture of machinery and equipment used by construction and mining industries
352	Manufacture of prime movers, boilers, steam generating plants and nuclear reactors
353	Manufacture of industrial machinery for food and textile industries (including bottling and filling machinery)
354	Manufacture of industrial machinery for other than food and textile industries

Group	Description
355	Manufacture of refrigerators, airconditioners and fire fighting equipment and their parts and accessories
356	Manufacture of general purpose non-electrical machinery/equipment, their components and accessories, n.e.c.
357	Manufacture of machine tools, their parts and accessories
358	Manufacture of office, computing and accounting machinery and parts. (Note : Manufacture of computers and computer based systems including word processors is classified in group 367)
359	Manufacture of special purpose machinery/equipment, their components and accessories n.e.c.
360	Manufacture of electrical industrial machinery, apparatus and parts thereof
361	Manufacture of insulated wires and cables, including manufacture of optical fibre cables
362	Manufacture of accumulators, primary cells and primary batteries
363	Manufacture of electric lamps
364	Manufacture of electric fans and electric/electro-thermic domestic appliances and parts thereof
365	Manufacture of apparatus for radio broadcasting, television transmission, radar apparatus and radio-remote control apparatus and apparatus for radio/line telephony and line telegraphy
366	Manufacture of television receivers; reception apparatus for radio broadcasting, radio telephony/telegraphy, video recording or reproducing apparatus, turn-tables, record-players, cassette-players and other sound reproducing apparatus, sound recording apparatus, microphones, loudspeakers, amplifiers and sound amplifiers and prerecorded audio/video records/tapes
367	Manufacture of computers and computer based systems

Group	Description
368	Manufacture of electronic valves and tubes and other electronic components n.e.c.
369	Manufacture of radiographic X-ray apparatus, X-ray tubes and parts and manufacture of electrical equipment n.e.c.
DIVISION 37: MANUFACTURE OF TRANSPORT EQUIPMENT AND PARTS	
370	Ship and boat building
371	Manufacture of locomotives and parts
372	Manufacture of railway/tramway wagons and coaches and other railroad equipment n.e.c.
373	Manufacture of heavy motor vehicles; coach work
374	Manufacture of motor cars and other motor vehicles principally designed for the transport of less than 10 persons (includes manufacture of racing cars and golf-cars etc.)
375	Manufacture of motor-cycles and scooters and parts (including three-wheelers)
376	Manufacture of bicycles, cycle-rickshaws and parts
377	Manufacture of aircraft, spacecraft and their parts
378	Manufacture of bullock-carts, push-carts and hand-carts etc.
379	Manufacture of transport equipment and parts not elsewhere classified
DIVISION 38: OTHER MANUFACTURING INDUSTRIES	
380	Manufacture of medical, surgical, scientific and measuring equipment except optical equipment
381	Manufacture of photographic, cinematographic and optical goods and equipment (excluding photo-chemicals sensitised paper and film)
382	Manufacture of watches and clocks
383	Manufacture of jewellery and related articles

Group	Description
384	Minting of currency coins
385	Manufacture of sports and athletic goods
386	Manufacture of musical instruments (Note: Manufacture of toy musical instruments is classified in group 389)
387	Manufacture of stationary articles n.e.c.
388	Manufacture of items based on solar energy like solar cells, cookers, air and water heating systems and other related items
389	Manufacture of miscellaneous products not elsewhere classified
<u>DIVISION 39: REPAIR OF CAPITAL GOODS</u>	
390	Repair of agricultural machinery/equipment
391	Repair of prime-movers, boilers, steamgenerating plants and nuclear reactors
392	Repair of machine tools
393	Repair of industrial machinery other than machine tools
394	Repair of office, computing and accounting machinery
395	Repair of electrical industrial machinery and apparatus
396	Repair of apparatus for radio-broadcasting or television transmission; radar apparatus, radio remote control apparatus and apparatus for radio/line telephony or line telegraphy
397	Repair of locomotives and other railroad equipment
398	Repair of heavy motor vehicles
399	Repair of machinery and equipment not elsewhere classified.
DIVISION 97 : REPAIR SERVICES	
970	Repair of footwear and other leather goods

Group	Description
971	Repair of household electrical appliances
972	Repair of TV, VCR, radio, transistor, tape-recorder, refrigerator and other electronic appliances
973	Repair of watches, clocks and jewellery
974	Repair of motor vehicles and motorcycles except trucks, lorry and other heavy vehicles
975	Repair of bicycles and cycle rickshaws
979	Repair of enterprises not elsewhere classified
