## SRI LANKA LABOUR FORCE SURVEY RESULTS

### Third Quarter 1994

The field work of the above survey conducted in the Third quarter of 1994 was confined to seven provinces of the country excluding the Northern and the Eastern Provinces, due to the prevailing situation in those two provinces. Thus the national level estimates based on the information collected in the Third quarter of 1994 do not cover the Northern and the Eastern Provinces. The field work of the survey in the Third quarter of 1994 was done in July 1994 and the current Labour Force Status of persons was measured as in the reference week of July 1994. This survey covers only the persons living in housing units and it excludes the institutional population.

#### Economically Active Population :

The survey estimates the economically active population in Sri Lanka (excluding the Northern and the Eastern Provinces) at 6.14 million, of which 5.29 million are employed and 0.84 million unemployed. Accordingly, the unemployment rate in Sri Lanka in the Third quarter of 1994 (excluding the Northern and the Eastern Provinces) is estimated at 13.7 percent.

60 + yrs	23.7	40.3	8.6

The Labour Force Status was measured for all persons aged 10 years and over (for those who are in the working age) and 49.2 percent of the working age population is estimated to be economically active. Among females, the highest participation (57.3%) was shown within the age group of 20-24, while the males within the same age group have shown a participation of 85.7 percent.

Sex	Total	Urban Sector	Rural Sector
Total	49.2	45.5	50.2
Male	65.3	64.9	65.3
Female	33.3	26.9	35.0

A higher participation in the Labour Force is reported for males (65.3%) as compared to the females (33.3%). Labour Force participation is comparatively higher in the rural sector than the urban sector (See Table 2).

### Employed Population :

The survey conducted in the Third quarter of 1994 estimates the employed population in Sri Lanka at 5.29 million. This number accounts for 86.3 percent of the total Labour Force. Of this number 3.65 million or 69.1 percent are males and 1.63 million or 30.9 percent are females. Of the employed, 1.03 million or 19.4 percent are residing in the urban sector and 4.26 million or 80.6 percent are residing in the rural sector.

The data is derived from household interviews obtained from a sample survey of the population 10 years of age and older. The survey is conducted quarterly by the Department of Census and Statistics and provides comprehensive data on the Labour Force, the Employed, the Unemployed and includes such characteristics as age, sex, occupation, and industry attachment. The survey also provides information on hours worked, and reasons for unemployment and non-participation in the labour force. The survey is conducted by trained interviewers from a total annual sample of about 10,000 households. The data collected are based on the respondent's activity or status during the preceding week and previous 12 month period.

#### B. Collection and Coverage

Data are collected quarterly during a similar time period in each quarter through a scientifically selected sample designed to represent the non-institutional household population. About 2500 households are visited each quarter. Respondents are interviewed to obtain information about each member of the household, 10 years of age or older. The inquiry relates to the previous calendar week of the interview to obtain "current" information, and to the previous 12 calendar months to obtain "usual" activity information.

Inmates of institutions, military camps, and lodging places are not surveyed. Households with more than 5 lodgers and boarders are also excluded from the survey.

#### C. Concepts and Definitions :

The concepts and definitions underlying the labour force data from this survey differ somewhat from those in previous labour force surveys. Therefore comparisons of data should be made carefully taking into account the concepts and definitions that follow:

**Labour Force** : The Labour force is composed of the economically active population aged 10 years and over.

**Economically Active Population** : The economically active population is defined as those persons who are/were employed or unemployed during the reference period of the survey.

**Employed** : Employed persons are all household members who during the reference period worked as paid employees, employers, own account workers (self-employed) or unpaid family workers, in family enterprises. Also included are persons who had a job but were temporarily absent from work because of such things as vacation, illness, bad weather, and labour - management disputes etc. It should be noted that if a person has one or more jobs, that person is counted only once.

**Unemployed** : Persons who were available and/or looking for work, and had no employment during the reference period, are considered to be unemployed.

**Reference Period** : In this survey there are two reference periods, "current" and "usual". The "current" reference period is the week preceding the week of data collection, i.e. last

week. The "Usual " reference period is the preceding 12 months, i.e., the past 12 months.

**Currently Economically Active :** A person who was employed or unemployed is considered to be currently economically active.

**Usually Economically Active :** A person whose major activity during the past 12 months was employment and/or unemployment is considered to have been usually economically active. Twenty-six weeks or more is the measure that determines the major activity of the respondent for the year.

**Currently Employed :** A person who works for pay, profit, or unpaid family gain for one (1) hour or more during the past week is considered to have been employed during that period. This includes persons whether paid or not, with a job but not at work for the various reasons cited above.

**Usually Employed :** A person whose major economic activity during the past 12 months was employment is considered to have been usually employed.

**Currently Unemployed :** A person who did no work but who was looking or available for work during the past 4 weeks is considered to have been currently unemployed.

**Usually Unemployed :** A person who was available/looking for work during the major part of the economically active period of the past 12 months is said to have been usually unemployed.

**Not In Labour Force** (not economically active) : Persons who were neither working nor available/looking for work are classified as not in the labour force. This group includes persons engaged in own house work, going to school, unable to work because of long term infirmities, retired, and others. Others include persons voluntarily idle.

## **MEASURES OF THE LABOUR FORCE:**

**The working age population** is the total non-institutional household population aged 10 years or over.

**The participation rate** is the proportion of the labour force that is in the working age population.

**The labour force** is the number of persons classified as employed or unemployed according to the criterion described above.

**The unemployment rate** represents the number of unemployed persons as a percent of the labour force.

These measures can be computed for age, sex, educational attainment and other personal or economic characteristics.

**Occupation, Industry and Employment Status :** These apply to the job held by the currently employed during the survey week. For persons with more than one job, it is usually the main job that is described. However, classifications are also made for the secondary job. Occupations are classified according to the International Standard Classification of Occupations (ISCO), ILO, 1988. Industry is classified according to ILO's International Standard Industrial

**Classification.** The employment - status classification specifies employment in the public or private sectors, and further breaks down into employees (wage and salary workers), employers, own account workers (self-employed), and unpaid family workers.

**Hours of Work** refer to hours actually worked during the week. If the hours actually worked are less than the hours usually worked, respondents are asked the reasons for working fewer hours, which include the following: illness or injury, strike, vacation, reduction in economic activity, off season inactivity, bad weather, mechanical or electrical failure, and shortage of raw materials.

**A Household** consists of all persons, related or not, who occupy a housing unit, which covers a house, an apartment, a group of rooms, or a single room when occupied as separate living quarters. Domestic servants, boarders, and lodgers who live and have their meals or share other essentials of living with the family are also treated as members of the household. Households with more than 5 lodgers (non-family members paying rent) and boarders, are considered as institutional units and are excluded from the survey. Persons, who usually live here but are temporarily away are included as members of the household, but persons who have usual residence elsewhere, but are present at the time of the interview, are excluded.

**Geographic Data :** Data is available at national and provincial levels, and further broken down by urban and rural categories. URBAN areas are those that have an administrative structure of a Municipal Council, an Urban Council, or the 1981 Town Council. RURAL areas are those not classified as urban. ESTATES are subsectors of rural areas. Because of current sample size limitations, data cannot be published at the District level or for the Estate category.

## **I. SAMPLE DESIGN**

The survey is conducted quarterly to produce estimates of employment, unemployment, labour force participation and basic demographic characteristics. The scope of coverage includes all households in Sri Lanka.

A stratified two-stage probability sample design is used with census blocks as primary sampling units (PSUs) and housing units as secondary and final sampling units (SSUs). There are three levels of stratification which increase the efficiency of the sample design. The first level consists of the 19 domains for which separate annual estimates are calculated; the nine provinces divided into urban and rural sectors, and the greater colombo area.

The total annual sample size is 10,080 housing units, distributed as 252 blocks (PSUs) per each quarter and 10 housing units (SSUs) per block. The allocation to the domains aims at ensuring approximately equal levels of reliability from domain to domain.

The 1,008 blocks were selected with probability proportional to size from the 1981 Census list of approximately 70,000 census blocks. A listing operation was conducted in each selected block to provide a frame for the second stage of selection. The selection of housing units within blocks was systematic with random start.
