**ANNUAL SURVEY OF CONSTRUCTION**  
**INDUSTRIES**  
**2006**

**Department of Census & Statistics**

## **PREFACE**

The first Survey of Construction Industry was conducted in 1993 with the assistance of Institute for Construction Training and Development (ICTAD). Thereafter this Department continues to conduct the survey annually to cater to the needs of National Planners and other data users.

This publication provides the Survey results for the year 2006 in which the reference period was 2005. The frame for this survey was the list of contractors registered with ICTAD.

Any suggestions to improve this survey are most welcome.

D.B.P. Suranjana Vidyaratne,  
Director General of Census & Statistics.

Department of Census & Statistics,  
No. 15/12, Maitland Crescent,  
P.O. Box 563,  
Colombo.  
April 2008.

## **ACKNOWLEDGEMENT**

The planning, collection and processing of data were done by the staff of the Industry and Construction Division under the guidance of Mr. D.C.A. Gunawardena, Director, and under the direction of Mr. D.G.S.G. Munasinghe, Deputy Director, with the assistance of Mr. U.S. Wanapushpa, Senior Statistician.

Computer assisted Data Processing was done by Mr. W.F.M.J. Fernando, Senior Statistician, using the Software Package Visual Basic with Access Data Base and the statistical tables were obtained by Mr. R.D.N. Premawansa, Statistician, using the software package SPSS/PC+.

Editing, coding and computerizing of data were done by Miss W.S.D. Jayasundara, Statistical Officer, Miss. B.H. Pushpakumari, Statistical Assistant under the direct supervision of Mr. R.D.N. Premawansa, Statistician. Miss. R. Rupika Malini, Data Entry Operator / Coding Clerk assisted in preparing of this publication.

Acknowledgements are also due to all the staff of printing division for printing this report within a short period.

The co-operation given by the respondents is also much appreciated.

# **Survey of Construction Industries – Sri Lanka 2006**

## **1. Introduction**

Survey of Construction Industry was conducted in 1993 for the first time in Sri Lanka mainly to furnish data regarding input, output and their trends to the Institute for Construction Training and Development (ICTAD). The Department of Census and Statistics continues to conduct the survey annually to cater to the requirements of the data users along with the rapid development of the construction industry in Sri Lanka. However, due to the unsettled conditions, the survey of construction industries could not be fully conducted in Northern and Eastern Provinces. Therefore, all information in this report is given only for the Provinces where the survey has been conducted.

## **2. Scope and Coverage**

In this survey, all construction activities undertaken by the private contractors who are registered with ICTAD, government and semi-government agencies are covered. Therefore, construction activities undertaken by the international contractors and the informal construction activities are not presented in this survey.

Information is collected relating to the following sectors of the construction industry.

- i. Building construction
- ii. Highway construction
- iii. Bridge construction
- iv. Water supply & drainage
- v. Irrigation & land drainage
- vi. Dredging & Reclamation
- vii. Other constructions

All construction activities, except building construction, mentioned above are categorized under Civil Engineering activities.

## **3. Methodology**

The Survey of Construction Industries was aimed to cover 901 sample units in all provinces except some districts in northern and eastern provinces during the reference year 2005. The department introduced a very simple questionnaire for the survey from the year 2000 considering the difficulties to obtain the information of construction activities.

The questionnaire was posted to selected contractors and followed up by sending reminding letters in order to collect information such as, value of contract, value of work done, value of raw materials used, salaries and other services.

In addition, the employment statistics and value of subcontract given by the main contractors are also collected.

#### **4. Frame**

List of contractors registered with the ICTAD and among those who were engaged in construction activities in the year 2005 have been used as the frame for this survey.

#### **5. Sample Design**

Stratified Systematic Sampling method was used for the survey and the list of contractors registered with the ICTAD was divided into 3 strata according to the grading system which the ICTAD has devised based on the financial terms. Contractors categorized under grade 1 to grade 5 were canvassed 100% and a probability sample was selected from other grades of 6 to 8 and 9 - 10 as shown below.

<b>Sample Frame</b>	<b>Strata</b>	<b>Sample fraction</b>	<b>Sample size</b>
1. List of contractors registered with ICTAD	grade 1-5	100%	241
	grade 6-8	40%	572
	grade 9-10	30%	88
<b>Total</b>			<b>901</b>

#### **6. Concepts & Definitions**

##### **(a) Reference Period**

Data relating to construction activities carried out during the calendar year 2005 or financial year 2005 April to 2006 March.

##### **(b) Employment**

This refers to the average number of persons engaged in construction activity during the reference period, including skilled labourers, unskilled labourers, technical, professional and other paid workers.

##### **(c) Salaries & Wages**

Amount paid as salaries, wages or subcontract on work done during the period.

##### **(d) Output**

Value of work done during the year 2005.

##### **(e) Input**

Expenditure on goods (raw materials) & services = goods + services + other expenses.

#### **(f) Value Added**

Value added is the increment addition to the value of raw materials and services, that is contributed by the contractor. It is computed as follows.

$$\text{Output} - \text{Input} = \text{Value added}$$

### **7. Survey Results**

The Survey of Construction Activities was not covered all construction activities carried out during the reference period in the island. The survey covers all the construction activities carried out by the contractors registered with ICTAD.

Therefore it is clear that ;

- a. The construction activities carried out other than by the ICTAD registered contractors such as construction of houses in the rural sector and urban sector;
- b. Large scale construction activities carried out by foreign contractors;

are not covered by this survey.

According to the Annual Survey of Construction Industries, the total estimated value of work done by all type of construction activities in Sri Lanka was Rs. 47,409 million in 2005. The highest contribution to this value has been made by the building construction sector which accounted for 50.5% of the total value of work done.

The major share of the value of work done of building construction sector (which amounted Rs. 23,928 million) has come from the private and public sector. The type of high way construction was the second highest contributor to the value of work done, amounting to 34.2% of the total value.

It is evident in the Table 10 that the highest value of work done reported from Colombo district and it was 34.3% of the total output. Matara and Kandy districts contributed to 20.5% and 8.5% to the total value of work done respectively. The lowest value of work done was reported from Moneragala district and it was 0.2% of the total output.
