# Sampling

## Sampling Procedure

---

A two-stage cluster sample design was used to produce representative data for Latvia. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100.0%, the class response rate was 100.0%, the student response rate was 81.3%, and the overall response rate was 81.3%. A total of 1,803 students aged 13-15 participated in the Latvia GYTS.
