

## **CHAPTER IV**

### **LAND UTILIZATION**

#### **1. INTRODUCTION**

From agricultural point of view, land is an indispensable factor for production of crops, raising of livestock and other ancillary agricultural activities. The proper utilization of land holdings under different components will contribute to the development of the nation's agricultural products. In order to scrutinize this development as well as farmers' attitude towards land use practices, a timely and comprehensive land use data has paramount importance for governmental, non-governmental and private sector data users. According to the international recommendations for Agricultural Census, the total land use is categorized into five main land use types, which are land under temporary crops, land under permanent crops, grazing land, fallow land, woodland and land for other purposes. Based on these major land use categories, the 2001/02 (1994 E.C.) Ethiopian Agricultural Sample Enumeration (EASE) provides quantitative information on land utilization at Regional, Zonal and Wereda levels.

The 2001/02(1994 E.C.) EASE covered all land holdings i.e., rural and urban holdings. In urban areas, size of land holdings was restricted to only cropland area and urban agricultural households were required to have a minimum size of 250 square meters in order to be covered in the census. On the other hand, in the rural areas land use data were collected without any size limitation of land holdings.

The coverage of land use data items in rural private holdings included all the categories of land used. However, in urban private holdings, the coverage of land use data item is limited to cropland area, which includes land under temporary and permanent crops. To have consistent and comparable land use information, a standard concepts and definitions were applied for the aforementioned data items.

In the 2001/02 EASE, a number of land use data was collected based on objective and subjective methods of enumeration. That is, in rural private holdings land area was obtained by forwarding relevant questions on size of land to the holder and by objective area

measurement using compass, measuring tape and programmable calculator. On the other hand, in urban private holdings data on land area was collected subjectively by interviewing the holder /responsible operator/ in standard or metric units (in some cases, local measuring units were reported).

This chapter deals with the data on land holding for rural and urban private holdings on land use findings from the results of the agricultural census for Addis Ababa City Administration. It covers data on farm holdings by type and size of land holdings; population in agricultural households both in rural and urban areas of private holding that are disaggregated by size of land holdings; land area and fragmentation by type of land use and size of holding; cropland area by crop categories and finally it treats data on area under land tenure systems.

Furthermore, since Addis Ababa is an Administration with a small area size, only tables providing different results at Administration level are presented in statistical Tables 4.1-4.7. Moreover, estimates, standard errors (SE) and coefficient of variations (CV) are given in Annex Tables 4.1-4.4.2 for some variables.

## **2. FARM HOLDINGS BY TYPE AND SIZE OF LAND HOLDINGS**

Farm holding is referred to all land or livestock holdings, which are mainly used for both crop and livestock production. Depending on the type of activities, an agricultural holder is engaged with farm holding has been categorized into three groups. These are “crop only” (crop production), “livestock only” and ” both crop and livestock” (the production of both crop and livestock). All three types of holdings are practiced in both rural and urban private holdings. Furthermore, the total area of land holdings under different uses is classified into seven-area size of holdings in hectare. The classification is given as follows:

- i- Under 0.10 hectare,
- ii- 0.10-0.50 hectare,
- iii- 0.51-1.00 hectare,
- iv- 1.01-2.00 hectares,
- v- 2.01-5.00 hectares,
- vi- 5.01-10.00 hectares, and
- vii- Above 10 hectares.

Hence, the number of agricultural holders is disaggregated by type and previous size of land holdings. From this point of view, one can realize that the total number of farm holdings within a given size of land holding is equal in magnitude with the corresponding reported number of agricultural holders.

The total number of agricultural holders that are involved in all types of farm-holding activities and the reported land use of Addis Ababa City Administration was estimated to be about 17,775. Out of the total holders those who are engaged in crop production, livestock, and both crop and livestock productions were estimated to be about 1,747(9.8%), 1,829 (10.3%) and 14,199 (79.9%) respectively. In general, most of agricultural holders (28.3%) had a total size of land holdings that ranges from 2.01 to 5.00 hectare and followed by 20.6% of the total holders with area size of holding that fall under 0.1 hectare. Moreover, with regard to type of farm activities, holders that are engaged in “crop only”, “livestock only” and “both crop and livestock production” are reported to have land holdings of less than 0.1 hectare (42.2% for “crop only”), the same size of less than 0.1 hectare (77.8% for “livestock only” and 2.01 to 5.00 hectare (35.1% for crop and livestock production), respectively (See Summary Table IV.1 and Figure IV.1).

In rural areas of Addis Ababa City Administration, the total number of agricultural holders was estimated to be 14,878 (83.7%) and this total is composed of holders engaged in crop production (8.7%), livestock (12.3%) and holders that are engaged in crop and livestock production (79.0%). In general, the majority of agricultural holders (31.0%) had a total size of land holdings that ranges from 2.01 to 5.00 hectare, followed by size of land holdings that fall within 1.01 to 2.00 hectare (20.9%). Similarly, agricultural holders that are involved in crop, livestock, and crop and livestock production are estimated to have an area size of holdings that is below 0.10 hectare (39.0% for “crop only”), the same holding size of less than 0.1 hectare (77.8% for “livestock Only”) and 2.01 to 5.00 hectare (38.9% for “crop and livestock production”), respectively (For details refer to Summary Table IV.1).

On the other hand, in urban areas of the Addis Ababa City Administration, the type of land use considered during the census were only crop field i.e., temporary and permanent crops.

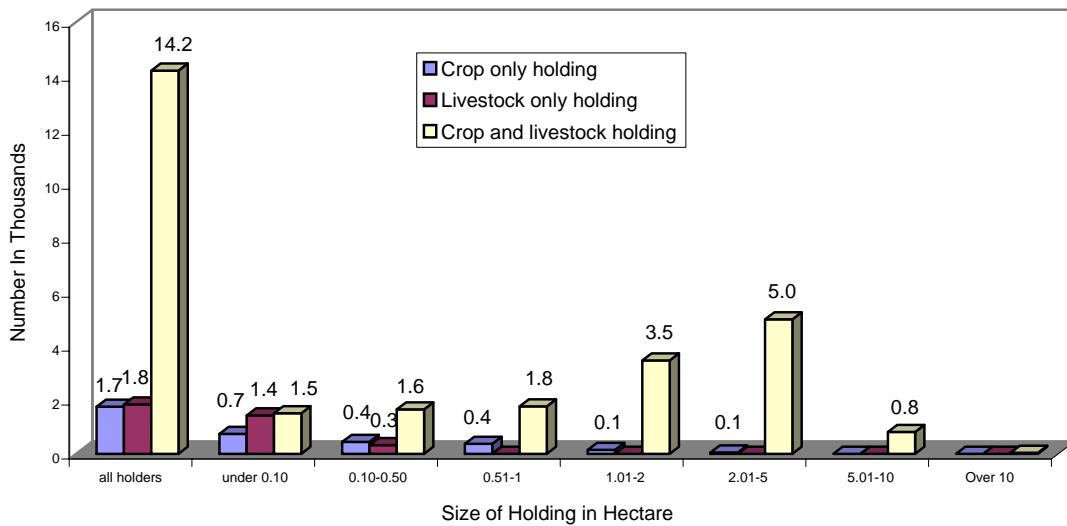

Thus, the census result indicates that 2,897 agricultural holders (16.3%) are reported in the urban areas of the City Administration. Of this total, 15.4 percent are only crop growing holders while the remaining 84.6 percent are practicing both crop and livestock production. Most of the holders (26.6%) in the urban areas had a land holding that is under 0.10 hectare. Among the total 446 (15.4%) crop-producing holders, 51.6% were holders with a holding size of below 0.10 hectare, followed by those between 0.1and 0.50 hectare (26.5%). Furthermore, among holders with crop and livestock production, the highest number is reported with holding size of below 0.10 hectare (22.0%) followed by holding size below 0.1 hectare (15.6%). See Summary Table IV.1.

**Summary Table IV.1 Distribution Of Agricultural Holders By Type And Size Of Holdings  
Rural And Urban Areas, For Private Holdings**

**Note:** Those holders with "Livestock only" reported land holding that might include grazing, woodland or land for other purposes.

**Figure IV.1: Distribution Of Agricultural Holders By Type And Size of Holdings,  
For private Holding**

### **3. POPULATION IN AGRICULTURAL HOUSEHOLDS AND SIZE OF LAND HOLDING**

The census data shows that the total population in agricultural households that depend on agricultural holdings are estimated and classified by area size of holdings. However, the total area size of holdings that are associated with agricultural households does not necessarily indicate the owner of the land, since the total land holding might include other land tenure systems at the time of enumeration.

The population in agricultural households is composed of agricultural and non-agricultural holders residing within the agricultural households. As the data in Summary Table IV.2 depicts, the total population in agricultural households in the City Administration were estimated to be about 95,897. The results also indicate that out of the total population in agricultural households, 17,775 were agricultural holders found in 17,055 agricultural households that have reported land holding. As shown in Summary Table IV.2, about 29.3% of agricultural households reported to have an estimated land area size between 2.01 and 5.00 hectare. This is followed by 21.4% of agricultural households who reported to have an area size of below 0.10 hectare and about 20.1% to have a land area size that fall between 1.01 to 2.00 hectares. The data also indicated that the average household size for the City Administration was estimated to be 5.62 persons or 562 members per 100 agricultural households.

**Summary Table IV.2: Distribution Of Population In Agricultural Households And Agricultural Households By Size Of Holdings In Rural And Urban Areas, For Private Holdings**

Items	Size of Holding (Hectares)

Average members per household....	5.89	6.39	5.36	5.13	5.82	6.53	6.75	*

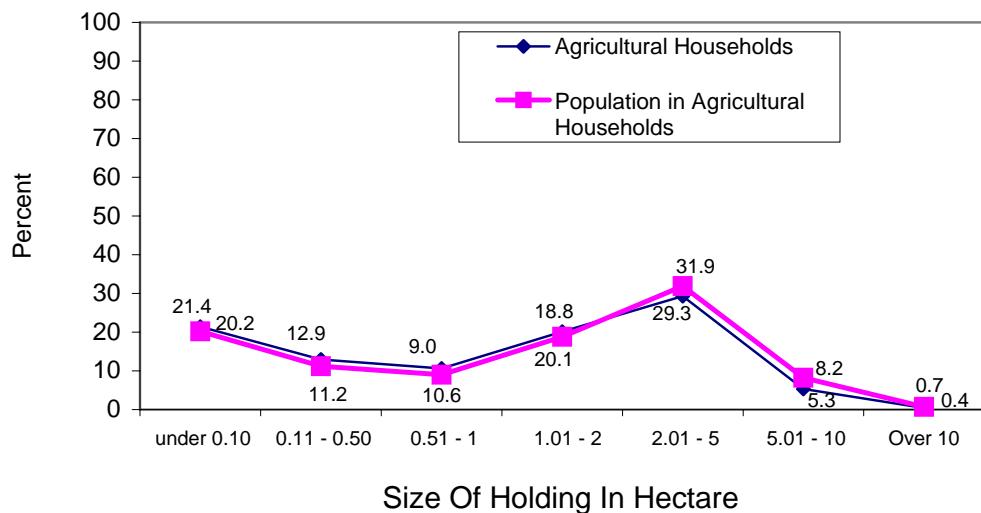

**Note:** In the urban areas, the number of agricultural households, holders and all members presented in Chapter III are considered as agricultural households whether they have or do not have land holdings. Whereas in this chapter the number of agricultural households are those who reported to have land holdings. Due to this reason estimate of agricultural households, holders and all members are slightly different in these two chapters.

Furthermore, the largest average household size (9.63 persons) was reported for those households with an average area size of holding of more than 10.00 hectares. The result shows that there is a general trend of increase in average household size with an increase in land holdings (See Summary Table IV.2 and Figure IV.2).

In the rural areas of the City Administration, the total (79,056) population is reported to be in 14,195 agricultural households. About 32.3 percent of the agricultural households are operating on the land area size that ranges from 2.01 to 5.00 hectare. Few numbers of

households (6.1%) are reported to operate on an average land holding of over 5.0 hectares. As can be observed in Summary Table IV.2, here also there is a general trend that as the land area size increases the average household size also increases. Also the average household size in the rural areas of the City Administration is estimated to be 5.57 persons.

**Figure IV.2: Percentage Distribution Of Population in Agricultural Households And Households By Size Of Holdings, For Private Holding**

The contribution of the urban areas to the total agricultural households and population in agricultural households is estimated to be 16.8% and 17.6%, respectively. Compared to the rural areas of the City Administration, larger numbers of urban agricultural households (about 26.8%) are reported to operate on land area size of below 0.10 hectare. Furthermore, the average household size of urban areas is 5.89 persons which is higher than that reported in the rural areas (See Summary Table IV.2).

#### **4. LAND AREA AND FRAGMENTATION BY TYPE OF LAND USE AND SIZE OF HOLDING**

Land area is referred to area under all private holdings. In general, the total area of a holding consists of land in the following classifications:

- i. Agricultural land (that includes land under temporary as well as permanent crops, fallow land and grazing land),
- ii. Woodland or forest, and

- iii. All other land that is, unused and undeveloped potentially productive land, homestead, etc.

On the other hand, land fragmentation is the breaking down of land holdings into parts with some distance apart from one another. Land fragmentation is measured by the number of parcels that are reported in the total land holdings of a holder. In general, a parcel of a holding is any pieces of land entirely surrounded by other land, water, road, forest or other boundaries that are not part of the holding.

#### **4.1. Land Area By Type Of Land Use**

As presented in Summary Table IV.3, the total land holding area under different land uses was estimated to be about 29,354 hectares, in the City Administration. This area is composed of 89.6% of the rural holdings and 10.4% of the urban holdings. Of this land, area under temporary crops accounted for 24,188 hectares (82.4%); land under grazing amount to be 3,515 hectares (12.0%); land for other uses is estimated to be 848 hectares (2.9%); wood land is reported to have 314 hectares (1.1%) and land for permanent crops is estimated to be 49 hectares (0.2%).

The census result indicated that out of the total estimated holders (17,775) very great number of them (15,707) used their holding to cultivate temporary crops, which is followed by 14,500 holders who had used their holding for other land purposes. The number of holders who had reported woodland was also observed to be 6,748. It was reported that 6,479 and 2,623 holders used their land as grazing and fallow during the census year respectively. On the other hand, the number of holders who had used their land for cultivating permanent crops was only 2,500. In general, the average size of land holding per holder was estimated to be 1.65 hectare. The result also shows that the highest average size of land holding area per holder is ascribed for the cultivation of temporary crops that was estimated as 1.54 hectare and followed by grazing land, which is about 0.54 hectare. (For details, refer to Summary Table IV.3 and Figure IV.3).

In rural private holdings, the total land area under different land uses was estimated to be 26,312 hectares contributing 89.6% to the total land area. Out of this total land area, the

highest (80.5%) and lowest (0.1%) proportions of areas were used for cultivating temporary and permanent crops, respectively. The average size of land holding was estimated to be 1.77 hectare per holder. Moreover, the highest average size of land holding per holder was reported as area under temporary crops (1.63 hectare), followed by land under grazing, which is about 0.54 hectare (See Summary Table IV.3).

**Summary Table IV.3. Distribution of Area and Holders by Type of Land Use in Rural And Urban Areas, For Private Holdings**

Average parcels per holder .....	2	2	1				
Average area per parcel (ha) .....	0.52	0.54	0.05				

**Note:** The number of holders and parcels that reported under land use classification are not mutually exclusive.

On the other hand, in urban private holdings, the total land area under both temporary and permanent crops was estimated to be 3,042 hectares contributing 10.4% to the total land area. Out of which temporary crops accounted for 3,018 (99.2%) hectares and permanent crops accounted for only 24 (0.8%) hectares. From the census data one can observe that the majority of urban holders in Addis Ababa City Administration tend to use most of their land for growing temporary crops (2,730), which is followed by permanent crops (478). In general, the average size of land area per holder was estimated to be 1.05 hectare. With

regards to temporary and permanent crops, average size of land holding per holder was estimated to be 1.11 hectare and 0.05 hectare, respectively (See Summary Table IV.3).

**Figure IV.3: Distribution of Area, Holders and Parcels by Type of Land use, For Private Holdings**

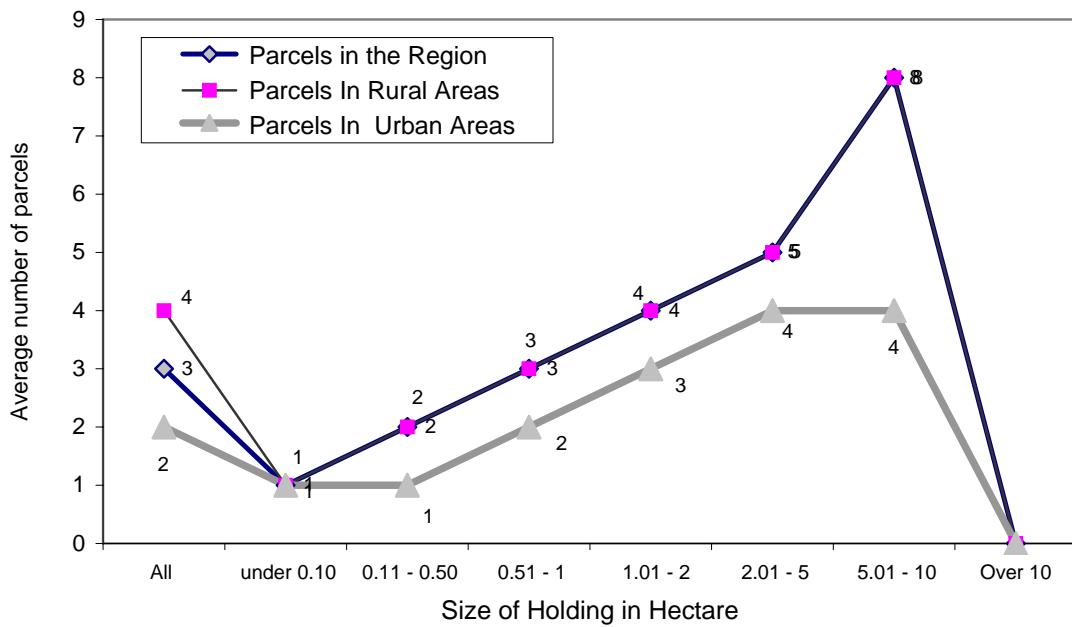

#### 4.2. Land Fragmentation By Size Of Holding

Providing information on land fragmentation is important to show how farmers waste their valuable working time, energy and other resources when the number of parcels are many and very far apart from one another. Taking this into consideration in the 2001/2002 EASE, data on number of parcels was collected for private holding in rural and urban areas of the City Administration. Accordingly, the census result indicates that 60,518 parcels were estimated under the total land holdings in the City Administration, which constituted 90.3% of rural holdings and 9.7% of urban holdings. Of this total parcels, the highest and smallest number of parcels or fragmentation of land are reported in area size of holding 2.01 to 5.00 hectare (44.6%) and 0.10 to 0.50 hectares (6.5%), respectively. Generally, temporary and permanent crops were cultivated on 48,302 parcels and 2,534 parcels, respectively. Moreover, fallow land, woodland, grazing land, and land for other purpose were found on 2,915 parcels, 7,436 parcels, 8,741 parcels, and 15,910 parcels, respectively. However, the number of parcels reported by land use categories is not mutually exclusive. The average size of land area per parcel and average number of parcels per holder were estimated to be about 0.49 hectare and three parcels, respectively (See Summary Table IV.3, Summary Table IV.4 and Figure IV.4).

**Summary Table IV.4. Distribution Of Parcels By Size Of Holdings In Rural And Urban Areas, For Private Holdings**

**Figure IV.4: Average Number Of Parcels By Size Of Holdings In Rural And Urban Areas, For Private Holdings**

In rural areas, the average number of parcels per holder was estimated at 4 parcels and the average area per parcel was 0.48 hectare. On the other hand, in urban areas, the extent of land fragmentation is estimated and the average number of parcels per holder is found to be two while the average size of land area per parcel is 0.52 hectare. For details refer to Summary Table IV.4.

## **5. CROPLAND AREA BY CROP CATEGORIES**

The 2001/02 (1994 E.C.) Agricultural Sample Enumeration covered the area under temporary and permanent crops in Meher/main and Belg seasons. In general, cropland area is described as part of the total land area, which comprises land under temporary and permanent crops.

### **5.1. Cropland Area Under Meher/Main Season**

The data in Summary Table IV.5 illustrates that the total cropland area for Meher/ main season in the City Administration was estimated to be 24,238 hectares, which consisted of 87.4% in rural and 12.6% in urban areas of private holdings. Out of the total cropland, area under temporary crops accounted to 99.8% and the remaining was the share of permanent crops. Considering the area under temporary crops, cereals, followed by pulses, accounted for 75.4% and 21.7%, respectively and covered the highest proportions of the land area under temporary crops. Of all the area under permanent crops, hops (Gesho) took the largest area, which account for 36 hectares (73.5%) and the smallest was chat contributing only one hectare (2.0%). Among the total holders in the City Administration who grows temporary crops (15,707) the largest number of holders (13,843) was cultivating cereals followed by holders (10,230) producing pulses. Similarly, among all holders (2,500) that are involved in growing permanent crops, the highest number (2,046) are growing hops (Gesho) while the least number of holders reported as cultivating coffee (73). The overall average cropland area per holder in the City Administration was estimated to be 1.52 hectare while area under temporary and permanent crops was estimated to be 1.54 and 0.02 hectare, respectively. (See Summary Table IV.5 and Figure IV.5).

**Summary Table IV.5. Distribution Of Cropland Area And Holders By Crop Categories In Rural And Urban Areas, For Private Holdings**

**Note:** Holders that reported by crop categories are not mutually exclusive.

In rural areas, temporary and permanent crops contribute about 99.9% and 0.1%, for private holdings, respectively. Out of the total area under temporary crops, the largest cultivated area was under cereal crops, followed by pulses, which contribute about 16,078 hectares (76.0%) and 4,889 hectares (23.1%), respectively. The number of holders producing these crops was estimated to be about 11,747 and 9,513 with corresponding average size of land area per holder of about 1.37 hectare and 0.51 hectare, respectively. (For details, refer to Summary Table IV.5).

In urban areas, the total cropland area is estimated to be 3,042 hectares, of which temporary crops and permanent crops accounted for 99.2% and 0.8%, for private holdings, respectively. Considering the total areas under temporary crops, cereals accounted for 2,147 hectares (71.1%) and the corresponding holders that cultivated cereal crops are estimated to be 2,096. Among land under permanent crops, enset crops took the highest cultivated area i.e., 8 hectares (33.3%) and operated by 202 holders (See Summary Table IV.5).

**Figure IV.5: Distribution of Cropland Area And Holders By Crop Categories For Private Holdings, Meher Season**

## 5.2. Cropland Area Under Belg Season

The census result indicated that in the rural private holdings about 49 hectares of land was cultivated under temporary crops during Belg season and the estimated total number of holders practicing Belg season crops were found to be 323. Of the total temporary cropland area, root crops took the highest share of the cultivated area (20.4%). The overall average area per holder during Belg season was estimated at 0.15 hectare (See Summary Table IV.6).

**Summary Table IV.6: Area Under Crop Categories And Number Of Holders- Belg season**

Type of Crop Categories	Area in Hectare		Holders reporting	Average area per holder
	Number	%		
<b>RURAL</b>				
All temporary crops	49	100.0	323	0.15
Cereals	*	*	68	*
Pulses	*	*	32	*
Oilseeds	0	0.0	0	-
Vegetables	*	*	232	*
Root crops	10	20.4	170	0.06
Other temporary crops	0	0.0	0	-

*Note: Data users should not attempt to sum up cropland area under Belg season to the total land use area since the Belg season cropland area is part of the total land use area. However, providing Belg season information in this section is to show only how the holders shift the Meher/main season cropland area, fallow land and/or any other land into Belg season. On the other hand, data on Belg season crops of the urban area was not covered in the census.*

## 6. AREA UNDER LAND TENURE SYSTEMS

Land tenure refers to the arrangements or rights under which the holder uses or owns the land of the holding. In this Agricultural Sample Census, tenure system is classified into

three categories. The first is land owned or held in owner like possession having recognition from local government/Kebele; the second is land rented from other person either in cash or proper share of the produce or other rental agreement and the third is land possession in other forms (neither owned nor rented such as land given temporarily to others without any rental agreement or any other means). Based on this concept, data on land tenure systems was collected and the result indicates that, of the total land area (29,354 hectares), land owned by the operators accounted for 24,313 hectares (82.8%) land rented from other person accounted for 3,670 hectares (12.5%) and land obtained from other system was estimated to be 1,371 hectares (4.7%) in the City Administration. Of the total holders (17,775) in the City Administration, 16,378 holders owned the land they operated, while 3,908 holders operated the land by rental agreement and 2,846 holders used the land in other system of tenure. The average size of area per holder by type of tenure is estimated to be 1.48 hectare (for land owned), 0.94 hectare (for rented land) and 0.48 hectare (for other tenure). (Refer Summary Table IV.7 and Figure IV.6).

Similarly in rural private holdings, of the total area (26,312 hectares), most of the land area was accounted to the title of ownership, which is estimated to be 21,957 hectares (83.5%) and operated by 14,002 holders. The average size of land area per holder under land owned and rented is 1.57 hectare and 0.94 hectare, respectively. Result for those who are cultivating their land under other tenure system is observed to be not reliable (See Summary Table IV.7).

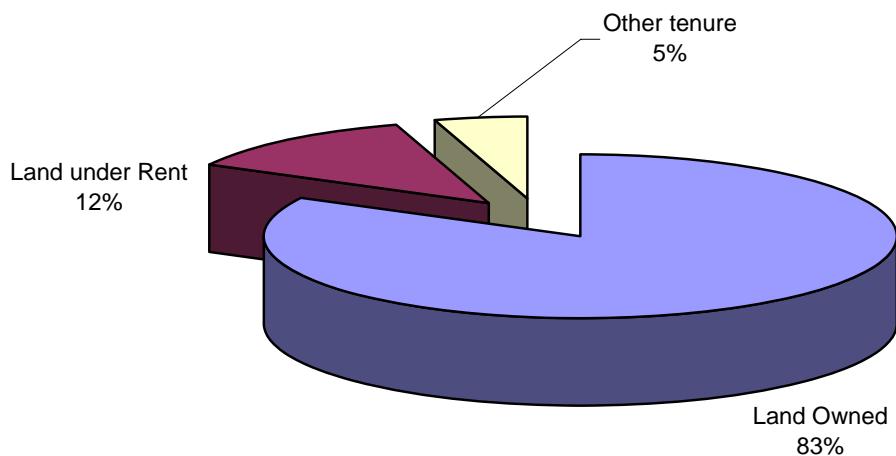

In urban private holdings, the tenure system is more or less similar to the rural. The proportion of land owned and rented is 77.5% and 16.4%, and that of other tenure system is 6.2%. On the other hand, the average size of land holding by type of tenure for land owned, land rented and land under other tenure system is estimated to be about 0.99 hectare, 0.91 hectare and 0.97 hectare per holder, respectively. The average size of owned land area per holder is higher in rural (1.57) than in urban, which is 0.99 (See Summary Table IV.7).

**Summary Table IV.7: Distribution of Land Area and Holders by Tenure Systems In Rural And Urban Areas, For Private Holdings**

Items	All Number	Type of Land Tenure Systems		
		Land Owned	Land Rented	Other Tenure
<b>RURAL + URBAN</b>
