

## **CHAPTER IV**

### **LAND UTILIZATION**

#### **1. INTRODUCTION**

From agricultural point of view, land is an indispensable factor for production of crops, raising of livestock and other ancillary agricultural activities. The proper utilization of land holdings under different components will contribute to the development of the nation's agricultural products. In order to scrutinize this development as well as farmers' attitude towards land use practices, a timely and comprehensive land use data has paramount importance for governmental, non-governmental and private sector data users. According to the international recommendations for Agricultural Census, the total land use is categorized into five main land use types, which are land under temporary crops, land under permanent crops, grazing land, fallow land, woodland and land for other purposes. Based on these major land use categories, the 2001/02 (1994 E.C.) Ethiopian Agricultural Sample Enumeration (EASE) provides quantitative information on land utilization at Regional, Zonal and Wereda levels.

The 2001/02(1994 E.C.) EASE covered all land holdings i.e., rural and urban holdings. In urban areas, size of land holdings was restricted to only cropland area and urban agricultural households were required to have a minimum size of 250 square meters in order to be covered in the census. On the other hand, in the rural areas land use data were collected without any size limitation of land holdings.

The coverage of land use data items in rural private holdings included all the categories of land used. However, in urban private holdings, the coverage of land use data item is limited to cropland area, which includes land under temporary and permanent crops. To have consistent and comparable land use information, a standard concepts and definitions were applied for the aforementioned data items.

In the 2001/02 EASE, a number of land use data were collected based on objective and subjective methods of enumeration. That is, in rural private holdings land area was obtained

by forwarding relevant questions on size of land to the holder and by objective area measurement using compass, measuring tape and programmable calculator. On the other hand, in urban private holdings data on land area was collected subjectively by interviewing the holder /responsible operator/ in standard or metric units (in some cases, local measuring units were reported).

This chapter deals with the data on land holding for rural and urban private holdings on land use findings from the results of the agricultural census for Benshangul-Gumuz Region. It covers data on farm holdings by type and size of land holdings; population in agricultural households both in rural and urban areas of private holding that are disaggregated by size of land holdings; land area and fragmentation by type of land use and size of holding; cropland area by crop categories and data on area under land tenure systems. Also the census data should be presented for all the zones and weredas in the region. Hence, tables providing these data at zonal and wereda levels are also presented in Statistical Tables 4.1-4.54. Moreover, Estimates, Standard Errors (S.E.) and Coefficients of Variation (C.V.) are given in Annex Tables 4.1-4.4.2 for some relevant variables.

## **2. FARM HOLDINGS BY TYPE AND SIZE OF LAND HOLDINGS**

Farm holding is referred to all land or livestock holdings, which are mainly used for both crop and livestock production. Depending on the type of activities, an agricultural holder that is engaged with farm holding has been categorized into three groups. These are “crop only” (crop production), “livestock only” and ” both crop and livestock” (the production of both crop and livestock). All three types of holdings are practised in both rural and urban private holdings. Furthermore, the total area of land holdings under different uses is classified into seven-area size of holdings in hectare. The classification is given as follows:

- i- Under 0.10 hectare
- ii- 0.10-0.50 hectare
- iii- 0.51-1.00 hectare
- iv- 1.01-2.00 hectares
- v- 2.01-5.00 hectares
- vi- 5.01-10.00 hectares

vii- Above 10 hectares

Hence, the number of agricultural holders is disaggregated by type and previous size of land holdings. From this point of view, one can realize that the total number of farm holdings within a given size of land holding is equal in magnitude with the corresponding reported number of agricultural holders.

The total number of agricultural holders that are involved in all types of farm-holding activities and the reported land use of Benshangule Gumuz Region was estimated to be about 129,019. Out of the total holders those who are engaged in crop production, livestock and both crop and livestock production were estimated to be about 31,828 (24.7%), 1,449(1.1%) and 95,741(74.2%), respectively. In general, most of agricultural holders (28.6%) had a total size of land holdings that ranges from 1.01 to 2.00 hectares and followed by 23.8% of the total holders with area size of holding that fall between 0.51 to 1.00 hectare. Moreover, with regard to type of farm activities, holders that are engaged in “crop only”, “livestock only” and “ both crop and livestock production” are reported to have land holdings that ranges from 0.1 to 0.5 hectare (35.2% for “ crop only”), less than 0.1 hectare (98.2% for “livestock only”) and 1.01 to 2 hectares (31.6% for mixed crop and livestock production), respectively (See Summary Table IV.1 and Figure IV.1).

In rural areas of Benshangul-Gumuz Region, the total number of agricultural holders was estimated to be 125,175(97.0%) and this total is composed of holders producing crop production (25.1%), livestock (1.2%) and holders that are engaged in mixed crop and livestock production (73.7%). In general, the majority of agricultural holders (28.9%) had a total size of land holdings that ranges from 1.01 to 2.00 hectares, followed by size of land holdings that fall within 0.51 to 1.00 hectare (24%). Similarly, agricultural holders that are involved in crop, livestock and mixed crop and livestock production are estimated to have an area size of holdings that ranges from 0.10 to 0.50 hectare (35.2% “crop only”), under 0.10 hectare (98.2% “ livestock only”) and 1.01 to 2.00 hectares (32.1% “crop and livestock production”), respectively (For details refer to Summary Table IV.1).

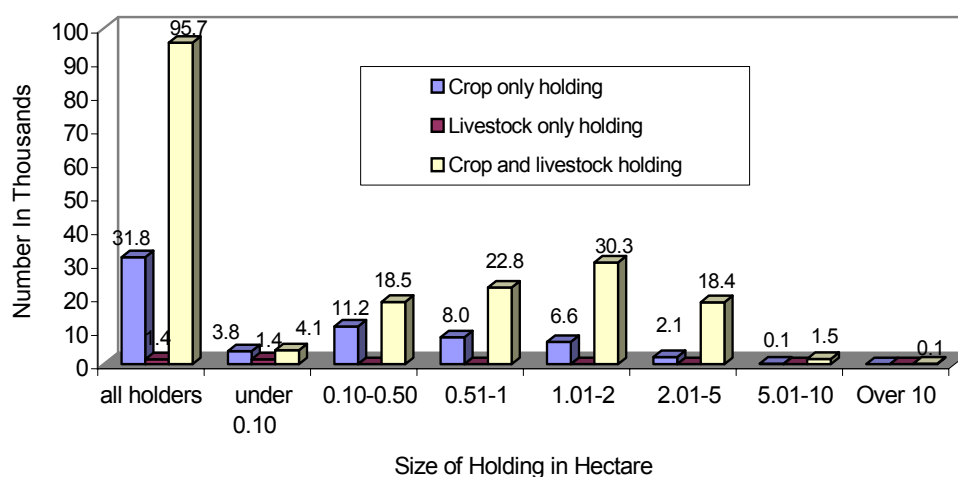

On the other hand, in urban areas of the Benshangul-Gumuz Region, the type of land use considered during the census was only crop field i.e., temporary and permanent crops.

**Summary Table IV.1 Distribution Of Agricultural Holders By Type And Size Of Holdings In Rural And Urban Areas And Zones, For Private Holdings**

Thus, the census result indicates that 3,843 agricultural holders (3.0%) are reported in the urban areas of the region. Of this total, 10.5 percent are only crop growing holders while the remaining 89.5 percent are practicing mixed farming (i.e., both crop and livestock production). Most of the holders (22.4%) in the urban areas had a land holding that is under 0.1 hectare. Among the total 405(10.5%) crop producing holders, 29.1% were holders with a holding size of 0.10 to 0.50 hectare, followed by those with 0.51 to 1.00 hectare (18.3%). Furthermore, holders with mixed crop and livestock production; the highest number is reported with holding size under 0.10 hectare (23.6%) followed by 0.51 to 1.00 hectare (19.0%). See Summary Table IV.1.

**Figure IV.1. Distribution Of Agricultural Holders By Type And Size Of Holdings, For Private Holding**

The census result show that of the total agricultural holders reported in the region, the largest number of agricultural holders was found in Asosa Zone (45.4%), followed by Metekel Zone (40.1%). Similarly, with regard to the type of farming activities, most of agricultural holders who are involved in “crop only” production (15,998) and mixed “crop and livestock” production (42,401) were reported in Asosa Zone with corresponding highest number of holders with a size of holding that ranges from 0.10 to 0.50 hectare and 1.01 to 2.00 hectares, respectively. On the other hand, the highest number of agricultural holders (1,202) that are engaged in “livestock only” production activities were found in Metekel Zone with corresponding highest number of holders having area size of holding of under 0.10 hectare (98.1%). Moreover, across the region, most of agricultural holders that are

engaged in livestock farming had total size of land holdings of under 0.10 hectare (For details, refer to Summary Table IV.1).

**Note:** Those holders with “livestock only” reported land holding that might include grazing land, woodland or land for other purposes.

### **3. POPULATION IN AGRICULTURAL HOUSEHOLDS AND SIZE OF LAND HOLDING**

The census data shows that the total population in agricultural households that depend on agricultural holdings are estimated and classified by area size of holdings. However, the total area size of holdings that are associated with agricultural households does not necessarily indicate the owner of the land, since the total land holding might include other land tenure systems at the time of enumeration.

The population in agricultural households is composed of agricultural and non-agricultural holders residing within the agricultural households. As the data in Summary Table IV.2 depicts, the total population in agricultural households in the region were estimated to be about 607,707. The results also indicate that out of the total population in agricultural households, 129,019 were agricultural holders found in 123,621 agricultural households that have reported land holding. As shown in Summary Table IV.2, about one third (29.3%) of agricultural households reported to have an estimated land area size between 1.01 to 2.00 hectares. This is followed by 23.4% of agricultural households who reported to have an area size ranging from 0.51 to 1.00 hectare and about one fifth (22.0%) to have a land area size that fall between 0.10 to 0.50 hectare. The data also indicated that the average household size for the region was estimated to be 4.92 persons or 492 members per 100 agricultural households. Furthermore, the largest average household size (8.22 persons) was reported for those households with an average area size of holding of over 10 hectares. Hence, the census results show that as size of land holdings increases, the average household size also increases (See Summary Table IV.2 and Figure IV.2).

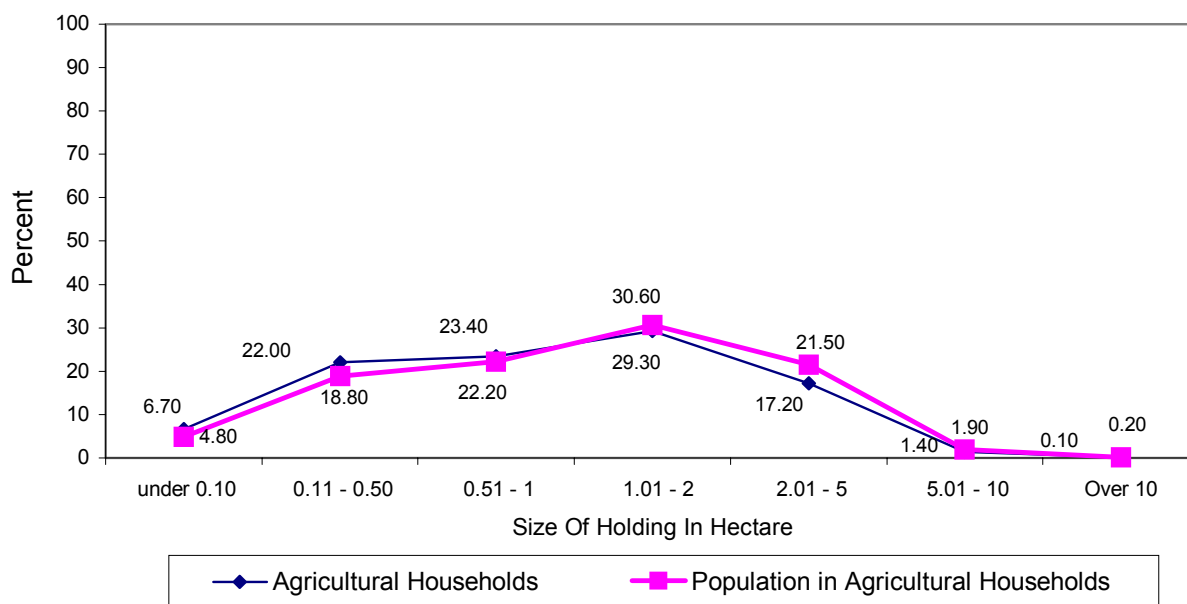

In the rural areas of the region, the total (587,359) population is reported to be in 119,816 agricultural households. About three quarters of the agricultural households are operating on the land area size that ranges from 0.10 to 2.00 hectares. An insignificant number of

households (0.1%) are reported to operate on average land holdings of over 10 hectares. As can be observed in Summary Table IV.2, as the land area size increases the average household size also increases. Also the average household size in the rural area is estimated to be 4.9 persons.

The contribution of urban areas to the total agricultural households and population in agricultural households is estimated to be 3.1% and 3.4%, respectively. Unlike the rural area, about one fifth (21.7%) of urban agricultural households are reported to operate on land area size of less than 0.1 hectare. Furthermore, the average household size of urban area is 5.35 persons which is higher than that reported in the rural areas (See Summary Table IV.2).

As the data in Summary Table IV.2 shows, the average household size in Kemeshi Zone is higher than those in the other two zones of Benshangul Gumuz Region. The relationship between the average household sizes across different size of land holding is similar in all the three zones of the region. That is, as area size increases the average household size also increases.

**Note:** *In the urban areas, the number of agricultural households, holders and all members presented in Chapter III are considered as agricultural households whether they have or do not have land holdings, whereas in this Chapter the number of agricultural households are those who reported to have land holdings. Due to this*

*reason estimate of agricultural households, holders and all members are slightly different in these two chapters.*

#### **4. LAND AREA AND FRAGMENTATION BY TYPE OF LAND USE AND SIZE OF HOLDING**

Land area is referred to area under all private holdings. In general, the total area of a holding consists of land in the following classifications:

- i. Agricultural land (that includes land under temporary as well as permanent crops, fallow land and grazing land)
- ii. Woodland or forest
- iii. All other land that is, unused and undeveloped potentially productive land, homestead, etc...

On the other hand, land fragmentation is the breaking down of land holdings into parts with some distance apart from one another. Land fragmentation is measured by the number of parcels that are reported in the total land holdings of a holder. In general, a parcel of a holding is any pieces of land entirely surrounded by other land, water, road, forest or other boundaries that are not part of the holding.

##### **4.1. Land Area By Type Of Land Use**

As presented in Summary Table IV.3, the total land holding area under different land uses was estimated to be about 154,309 hectares, in the region. This area is composed of 96.3% of the rural holdings and 3.7% of the urban holdings. Of this land, area under temporary crop accounted for 143,961 hectares (93.3%); land under permanent crops estimated to be 2,501 hectares (1.6%); grazing land amount to be 639 hectares (0.4%); fallow land is reported to be 5,115 hectares (3.3%); woodland amounted to be 46 hectares (0.03%) and land for other uses is estimated to be 2,047 hectares (1.3%).

The census result indicated that out of the total estimated holders (129,019) almost all (126,621) used their holding to cultivate temporary crops which is followed by 120,735 holders who had used their holding for other land purposes. It was also reported that 53,114 holders used their land for cultivating permanent crops and 24,266 holders left their land as fallow during the census year. On the other hand, number of holders reported grazing and

woodland account for about 2,511 and 1,692, respectively. In general, the regional average size of land holding per holder was estimated to be 1.2 hectares.

**Summary Table IV.3. Distribution of Area and Holders by Type of Land Use in Rural And Urban Areas And Zones, For Private Holdings**

*Note: The number of holders and parcels that reported under land use classification are not mutually exclusive.*

The result also shows that the highest average size of land holding area per holder is for the cultivation of temporary crops, which was estimated at 1.14 hectares and followed by grazing land, which is about 0.25 hectare. (For details, refer to Summary Table IV.3 and Figure IV.3).

In rural private holdings, the total land area under different land uses was estimated to be 148,658 hectares contributing 96.3% to the regional total land area. Out of this total land area, the highest (93.2%) and lowest (0.03%) proportions of area were used for cultivating temporary crops and as woodland, respectively. The average size of land holding was estimated to be 1.19 hectares per holder. Moreover, the highest average size of land holding per holder was reported as area under temporary crops (1.12 hectares), followed by land under grazing, which is about 0.25 hectare (See Summary Table IV.3).

On the other hand, in urban private holdings, the total land area under both temporary and permanent crops was estimated to be 5,651 hectares contributing 3.7% to the regional total land area. Out of which temporary crops accounted for 5489 (97.1%) hectares and permanent crops accounted for only 162 (2.9%) hectares. From the census data one can observed that the majority of urban holders in Benshangul-Gumuz Region tend to use most of their land for growing temporary crops (3,250), which is followed by permanent crops (1,559). In general, the average size of land area per holder was estimated to be 1.47 hectares. With regards to temporary and permanent crops, average size of land holding per holder was estimated to be 1.69 hectares and 0.10 hectare, respectively (See Summary Table IV.3).

**Figure IV.3. Distribution of Area, Holders and Parcels by Type of Land Use, for Private Holdings**

Of the total land area recorded in Benshangul-Gumuz Region, the largest area is contributed by Metekel Zone (47.2%), followed by Asosa Zone (38.5%). In all zones of the region, over 90 percent of land use was allotted to the cultivation of temporary crops. On the other hand, in Asosa Zone land under permanent crops and grazing land were relatively larger than that reported in the other two zones. The average size of area per holder ranges from 1.41 hectares in Metekel Zone to 1.02 hectares in Asosa Zone.

**Note:** Holders and parcels that reported by land use categories are not mutually exclusive.

#### **4.2. Land Fragmentation By Size Of Holding**

Providing information on land fragmentation is important to show how farmers waste their valuable working time, energy and other resources when the number of parcels are many and very far apart from one another. Taking this into consideration in the 2001/2002 EASE, data on number of parcels was collected for private holding in rural and urban areas of the region.

Accordingly, the census result indicates that 418,390 parcels were estimated under the total land holdings in the region, which constituted 98.2% of rural holdings and 1.8% of urban holdings. Of this total parcels, the highest and smallest number of parcels or fragmentation of land are reported in area size of holding 1.01 to 2.00 hectares (36.7%) and over 10 hectares (0.1%), respectively. Generally, temporary and permanent crops were cultivated on 357,140 parcels and 75,339 parcels, respectively. Moreover, grazing land, fallow land, woodland and land for other purpose were found on 2,626 parcels, 29,032 parcels, 1,912 parcels and 131,424 parcels, respectively. However, the number of parcels reported by land use categories is not mutually exclusive. The average size of land area per parcel and average number of parcels per holder were estimated to be about 0.37 hectare and three parcels, respectively. See Summary Table IV.3, Summary Table IV.4 and Figure IV.4).

In rural areas, the average number of parcels per holder was estimated at 3 parcels and the average area per parcel was 0.36 hectare. On the other hand, in urban areas, the extent of land fragmentation is estimated and the average number of parcels per holder is found to be

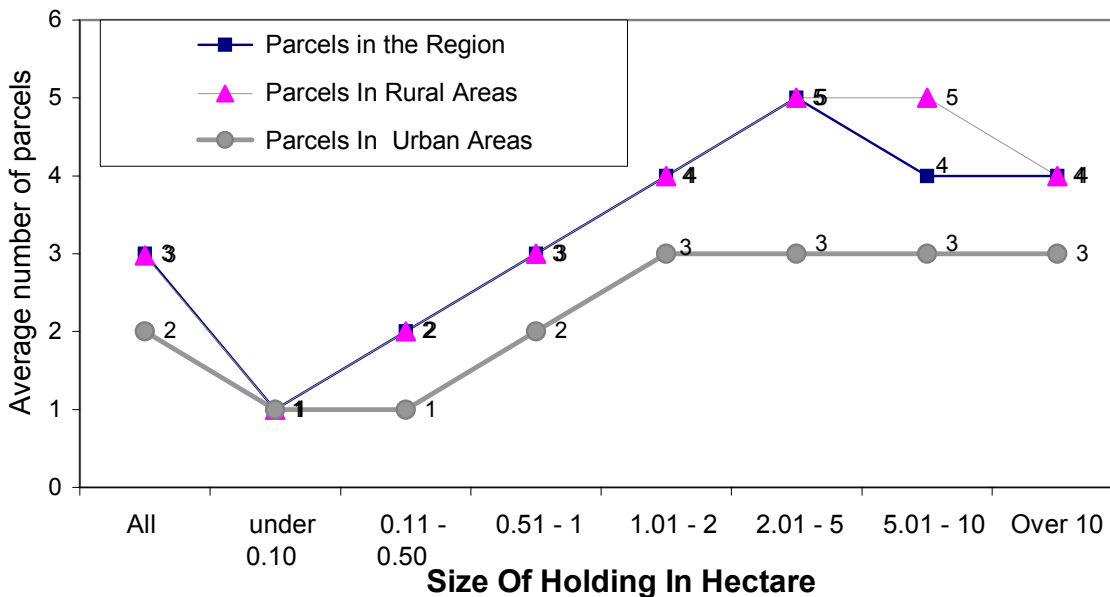

two while the average size of land area per parcel is 0.74 hectare. For details refer to Summary Table IV.4.

The census result reveals that the highest number of parcels or land fragmentation were observed in Asosa Zone, followed by Metekel Zone with the corresponding estimated number of parcels at 212,500 parcels (50.8%) and 157791 parcels (37.7%), respectively. In Asosa Zone the average number of parcels per holder were estimated to be four parcels, followed by Kemeshi Zone, which is three parcels (See Summary Table IV.3)

Figure IV.4. Average Number Of Parcels By Size Of Holdings In Rural And Urban Areas, For Private Holdings

## 5. CROPLAND AREA BY CROP CATEGORIES

The 2001/02 (1994 E.C.) Agricultural Sample Enumeration covered the area under temporary and permanent crops in Meher/main and Belg seasons. In general, cropland area is described as part of the total land area, which comprises land under temporary and permanent crops.

### 5.1. Cropland Area Under Meher/Main Season

The data in Summary Table IV.5 illustrates that the total cropland area for Meher/ Main season in the region was estimated to be 146,462 hectares, which consisted of 96.1% in rural and 3.9% in urban areas of private holdings. Out of the total cropland, area under temporary crops accounted to 98.3% and the remaining was the share of permanent crops. Considering the area under temporary crops, the highest proportion was covered by cereals and followed by oilseeds, which accounted for 74.7% and 18.7%, respectively. Of all the area under permanent crops, fruit crops took the largest area, which account for 1,171 hectares (46.8%) and the smallest was area under Enset, which covered about 4 hectares (0.2%). Among the total holders in the region who grows temporary crops (126,622), the

*Note: Holders that reported by crop categories are not mutually exclusive.*

largest number of holders (124,567) was cultivating cereals followed by holders (73,961) producing oilseeds. Similarly, among all holders (53,095) that are involved in growing permanent crops, the highest number (46,191) are growing fruit crops while the lowest number of holders (476) are cultivating Enset crops. The overall average cropland area per holder in the region was estimated to be 1.15 hectares while area under temporary and permanent was estimated to be 1.14 hectares and 0.05 hectare , respectively. (See Summary Table IV.5 and Figure IV.5).

In rural areas, temporary and permanent crops contribute about 98.3% and 1.7%, for private holdings, respectively. Out of the total area under temporary crops, the largest cultivated area was under cereal crops, followed by oilseeds, which contribute about 103,942 hectares (75.1%) and 25,244 hectares (18.2%), respectively. The number of holders producing these crops was estimated to be about 121,474 and 72,373 with corresponding average size of land area per holder of about 0.86 hectare and 0.35 hectare, respectively. ( For details, refer to Summary Table IV.5).

**Figure IV.5. Distribution of Cropland Area And Holders By Crop Categories For Private Holdings, Meher Season**

In urban areas, the total cropland area is estimated to be 5,651 hectares, of which temporary crops and permanent crops accounted for 97.1% and 2.9%, for private holdings, respectively. Considering the total areas under temporary crops, cereals accounted for 3,563 hectares (64.9%) and the corresponding holders that cultivated cereal crops are estimated to be 3,093. Among land under permanent crops, fruit crops took the highest cultivated area i.e., 113 hectares (69.9%) and operated by 1,424 holders. Unlike the rural areas, holders in urban area did not have Enset crops (See Summary Table IV.5).

The highest average area under temporary crops was reported as 1.37 hectares per holder in Metekel Zone, followed by Kemeshi Zone, which was 1.11 hectares per holder. The largest permanent cropland area was also estimated in Asosa Zone, followed by Metekel Zone which estimated at 1,401 hectares and 700 hectares, respectively. Out of the total areas under permanent crops in Asosa Zone, fruit crops covered half (55.3%) of the area, followed by coffee that covered an area of 532 (38.0%) hectares.

## 5.2. Cropland Area Under Belg Season

The census result indicated that in the rural private holdings about 905 hectares of land was cultivated under temporary crops during Belg season and the estimated total number of holders practicing Belg season crops were found to be 11,254. Of the total temporary cropland area, cereals took the highest share of the cultivated area (41.3% ). The overall average area per holder during Belg season was estimated at 0.08 hectare (See Summary Table IV.6).

**Summary Table IV.6: Area Under Crop Categories And Number Of Holders- Belg season**

Type of Crop Categories	Area in Hectare		Holders reporting	Average area per holder
	Number	%		
<b>RURAL</b>				
All temporary crops	905	100	11254	0.08
Cereals	379	41.3	6020	0.06
Pulses	105	11.6	3953	0.03
Oilseeds	*	*	*	*
Vegetables	37	4.1	3037	0.01
Root crops	377	41.7	5535	0.07
Other temporary crops	*	*	*	*

*Note: Data users should not attempt to sum up cropland area under Belg season to the total land use area since the Belg season cropland area is part of the total land use area. However, providing Belg season information in this section is to show only how the holders shift the Meher/main season cropland area, fallow land and/or any other land into Belg season. On the other hand, data on Belg season crops of the urban area was not covered in the census.*

## **6. AREA UNDER LAND TENURE SYSTEMS**

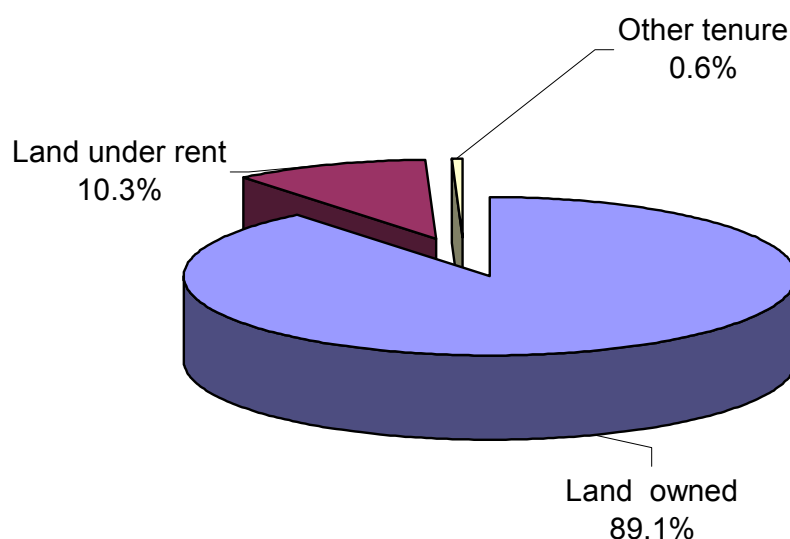

Land tenure refers to the arrangements or rights under which the holder uses or owns the land of the holding. In this Agricultural Sample Census, tenure system is classified into three categories. The first is land owned or held in owner like possession having recognition from local government/ Kebele; the second is land rented from other person either in cash or proper share of the produce or other rental agreement and the third is land possession in other forms ( neither owned nor rented such as land given temporarily to others without any rental agreement or any other means). Based on this concept, data on land tenure systems was collected and the result indicates that of the total land area (154,309 hectares), land owned by the operators accounted for 137,538 hectares (89.1%), land rented from other person accounted for 15,859 hectares (10.3%) and land obtained from other system was estimated to be 912 hectares (0.6 %) in the region. Of the total holders (129,019) in the region, 126,834 holders owned the land they operated, while 17,942 holders operated the land by rental agreement and 4,154 holders used the land in other system of tenure. The average size of area per holder by type of tenure is estimated to be 1.08 hectares (for land owned), 0.88 hectare (for rented land) and 0.22 hectare (other tenure). (Refer Summary Table IV.7 and Figure IV.6).

Similarly in rural private holdings, of the total area (148,658 hectares), most of land area was accounted to the title of ownership, which is estimated to be 134,201 hectares (90.3%) and operated by 123,519 holders. The average size of land area per holder under land owned and rented is 1.09 hectares and 0.80 hectare, respectively, while it is only 0.21 hectare for other tenure systems (See Summary Table IV.7).

In urban private holdings, the tenure system is different in which the proportion of land owned is 59.1% and that of rented land is 40.6%. On the other hand, the average size of land holding by type of tenure is estimated to be about 1.01 hectare, 2.21 hectares and 1.30 hectares per holder for land owned, land under rent and land under other tenure system, respectively. In urban areas the average size of rented land area per holder (2.21 hectares) is greater than that reported in rural areas (0.80 hectare). (See Summary Table IV.7 ).

Summary Table IV.7 also presents the distribution of land tenure systems for the zones. As indicated in the table, in all the zones the proportion of owned land was the highest, followed by rented land. The proportion of rented land in Metekel Zone was 12,782 hectares (80.6% of regional rented land area) and this percentage was relatively higher compared to those in the other two zones.

**Figure IV.6. Percentage Distribution Of Total Land Area By Tenure Systems, For Private Holdings**

**Note :** *Holders that reported different type of land tenure systems should not be summed up to get the total number of holders since these holders are not mutually exclusive in each tenure systems.*
