

CHAPTER IV

LAND UTILIZATION

1. INTRODUCTION

From agricultural point of view, land is an indispensable factor for production of crops, raising of livestock and other ancillary agricultural activities. The proper utilization of land holdings under different components will contribute to the development of the nation's agricultural products. In order to scrutinize this development as well as farmers' attitude towards land use practices, a timely and comprehensive land use data has paramount importance for governmental, non-governmental and private sector data users. According to the international recommendations for Agricultural Census, the total land use is categorized into five main land use types, which are land under temporary crops, land under permanent crops, grazing land, fallow land, woodland and land for other purposes. Based on these major land use categories, the 2001/02 (1994 E.C.) Ethiopian Agricultural Sample Enumeration (EASE) provides quantitative information on land utilization at Regional, Zonal and Wereda levels.

The 2001/02(1994 E.C.) EASE covered all land holdings i.e., rural and urban holdings. In urban areas, size of land holdings was restricted to only cropland area and urban agricultural households were required to have a minimum size of 250 square meters in order to be covered in the census. On the other hand, in the rural areas land use data were collected without any size limitation of land holdings.

The coverage of land use data items in rural private holdings included all the categories of land used. However, in urban private holdings, the coverage of land use data item is limited to cropland area, which includes land under temporary and permanent crops. To have consistent and comparable land use information, a standard concepts and definitions were applied for the aforementioned data items.

In the 2001/02 EASE, a number of land use data was collected based on objective and subjective methods of enumeration. That is, in rural private holdings land area was obtained

by forwarding relevant questions on size of land to the holder and by objective area measurement using compass, measuring tape and programmable calculator. On the other hand, in urban private holdings data on land area was collected subjectively by interviewing the holder /responsible operator/ in standard or metric units (in some cases, local measuring units were reported).

This chapter deals with the data on land holding for rural and urban private holdings on land use findings from the results of the agricultural census for Southern Nations Nationalities & Peoples (SNNP) Region. It covers data on farm holdings by type and size of land holdings; population in agricultural households both in rural and urban areas of private holding that are disaggregated by size of land holdings; land area and fragmentation by type of land use and size of holding; cropland area by crop categories and data on area under land tenure systems. Also the census data should be presented for all the zones and weredas in the region. Hence, tables providing these data at zonal and wereda levels are also presented in Statistical Tables 4.1-4.56. Moreover, Estimates, Standard Errors (S.E.) and Coefficients of Variation (C.V.) are given in Annex Tables 4.1 – 4.4.2 for some relevant variables.

2. FARM HOLDINGS BY TYPE AND SIZE OF LAND HOLDINGS

Farm holding is referred to all land or livestock holdings, which are mainly used for both crop and livestock production. Depending on the type of activities, an agricultural holder is engaged with farm holding has been categorized into three groups. These are “crop only” (crop production), “livestock only” and ” both crop and livestock” (the production of both crop and livestock). All three types of holdings are practiced in both rural and urban private holdings. Furthermore, the total area of land holdings under different uses is classified into seven-area size of holdings in hectare. The classification is given as follows:

- i- Under 0.10 hectare
- ii- 0.10-0.50 hectare
- iii- 0.51-1.00 hectare
- iv- 1.01-2.00 hectares
- v- 2.01-5.00 hectares
- vi- 5.01-10.00 hectares
- vii- Above 10 hectares

Hence, the number of agricultural holders is disaggregated by type and previous size of land holdings. From this point of view, one can realize that the total number of farm holdings within a given size of land holding is equal in magnitude with the corresponding reported number of agricultural holders.

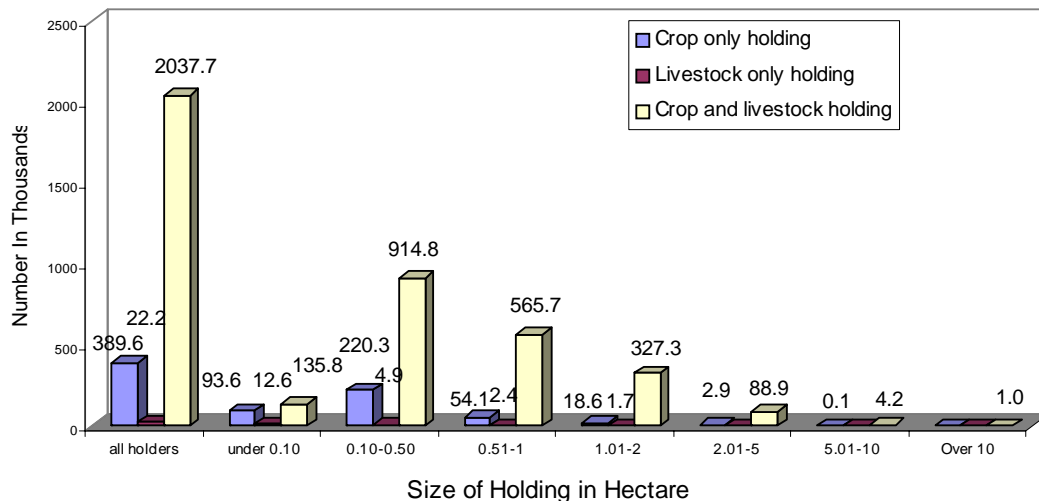

The total number of agricultural holders that are involved in all types of farm-holding activities and the reported land use of SNNP Region was estimated to be about 2,449,523. Out of the total holders those who are engaged in crop production, livestock and both crop and livestock production were estimated to be about 389,609 (15.9%), 22,185(0.9%) and 2,037,728(83.2%), respectively. In general, most of agricultural holders (46.5%) had a total size of land holdings that ranges from 0.10 to 0.50 hectare and followed by 25.4% of the total holders with area size of holding that fall between 0.51 and 1.00 hectare. Moreover, with regard to type of farm activities, holders that are engaged in “crop only”, “livestock only” and “ both crop and livestock production” are reported to have land holdings that ranges from 0.10 to 0.50 hectare (56.5% for “ crop only”), less than 0.10 hectare (56.8% for “livestock only”) and 0.10 to 0.50 hectare (44.9% for mixed crop and livestock production), respectively (See Summary Table IV.1 and Figure IV.1).

In rural areas of SNNP Region, the total number of agricultural holders were estimated to be 2,400,156 (98.0%) and this total is composed of holders producing crop production (15.7%), livestock (0.9%) and holders that are engaged in mixed crop and livestock production (83.3%). In general, the majority of agricultural holders (46.7%) had a total size of land holdings that ranges from 0.10 to 0.50 hectare, followed by size of land holdings that fall within 0.51 to 1.00 hectare (25.7%). Similarly, agricultural holders that are involved in crop, livestock and mixed crop and livestock production are estimated to have an area size of holdings that ranges from 0.10 to 0.50 hectare (57.0%”crop only”), under 0.10 hectare (56.8% “ livestock only”) and 0.10 to 0.50 hectare (45.0% “crop and livestock production”), respectively (For details refer to Summary Table IV.1).

On the other hand, in urban areas of the SNNP Region, the type of land use considered during the census were only crop field i.e., temporary and permanent crops.

Thus, the census result indicates that 49,366 agricultural holders (2.0%) are reported in the urban areas of the region. Of this total, 23.7 percent are only crop growing holders while the remaining 76.3 percent are practicing mixed farming (i.e., both crop and livestock production). Most of the holders (41.1%) in the urban areas had a land holding that falls within 0.10 to 0.50 hectare. Among the total 11,688 (23.7%) crop-producing holders, 45.8% were holders with a holding size of under 0.10 hectare, followed by those with 0.10 to 0.50 hectare (40.8%). Furthermore, among holders with mixed crop and livestock production, the highest number is reported with holding size 0.10 to 0.50 hectare (41.2%) followed by holders with holding size of under 0.10 hectare (37.1%)(See Summary Table IV.1).

Figure IV.1: Distribution Of Agricultural Holders By Type And Size of Holdings, For private Holding

The census result shows that of the total agricultural holders reported in the region, the largest number of agricultural holders was found in Sidama Zone (20.3%), followed by Guraghe Zone (15.4%). Similarly, with regard to the type of farming activities, most of agricultural holders who are involved in “crop only” production (76,194) and mixed “crop and livestock” production (420,536) were both reported in Sidama Zone with corresponding highest number of holders with a size of holding that ranges from 0.10 to 0.50 hectare for two of them. On the other hand, the highest number of agricultural holders (7,996) that are engaged in “livestock only” production activities were found in South Omo Zone with corresponding highest number of holders having area size of holding of under 0.10 hectare

(29.9%). Moreover, across the region, most of agricultural holders that are engaged in livestock farming had total size of land holdings of under 0.10 hectare (For details, refer to Summary Table IV.1).

Summary Table IV.1: Distribution Of Agricultural Holders By Type And Size Of Holdings In Rural And Urban Areas And Zones, For Private Holdings

Note : Those holders with “livestock only” reported land holding that might include grazing land, woodland or land for other purposes

3. POPULATION IN AGRICULTURAL HOUSEHOLDS AND SIZE OF LAND HOLDING

The census data shows that the total population in agricultural households that depend on agricultural holdings are estimated and classified by area size of holdings. However, the total area size of holdings that are associated with agricultural households does not necessarily indicate the owner of the land, since the total land holding might include other land tenure systems at the time of enumeration.

The population in agricultural households is composed of agricultural and non-agricultural holders residing within the agricultural households. As the data in Summary Table IV.2 depicts, the total population in agricultural households in the region were estimated to be about 12,283,001. The results also indicate that out of the total population in agricultural households, 2,449,523 were agricultural holders found in 2,387,932 agricultural households that have reported land holding. As shown in Summary Table IV.2, about 46.2% of agricultural households reported to have an estimated land area size between 0.10 and 0.50 hectare. This is followed by 25.6% of agricultural households who reported to have an area size ranging from 0.51 to 1.00 hectare and about 14.7% to have a land area size that fall between 1.01 to 2.00 hectares. The data also indicated that the average household size for the region was estimated to be 5.14 persons or 514 members per 100 agricultural households. Furthermore, the largest average household size (7.42 persons) was reported for those households with an average area size of holding of 5.01 to 10.00 hectares. Hence, the census results show that in general as size of land holdings increases, the average household size also increases (See Summary Table IV.2 and Figure IV.2).

In the rural areas of the region, the total (12,009,465) population is reported to be in 2,338,809 agricultural households. About 46.4 percent of the agricultural households are operating on the land area size that ranges from 0.10 to 0.50 hectare. An insignificant number of households (0.2%) are reported to operate on an average land holding of 5.01 to 10.00 hectares. As can be observed in Summary Table IV.2, in general as the land area size increases the average household size also increases. Also the average household size in the rural area is estimated to be 5.13 persons.

The contribution of urban areas to the total agricultural households and population in agricultural households is estimated to be 2.1% and 2.2%, respectively. Compared to the rural area, relatively larger numbers of urban agricultural households (about 39.1%) are reported to operate on land area size of below 0.1 hectare. Furthermore, the average household size of urban area is 5.57 persons which is higher than that reported in the rural areas (See Summary Table IV.2).

***Note:** In the urban areas, the number of agricultural households, holders and all members presented in Chapter III are considered as agricultural households whether they have or do not have land holdings. Whereas in this chapter the number of agricultural households are those who reported to have land holdings. Due to these reason estimates of agricultural households, holders and all members are slightly different in these two chapters.*

As the data in Summary Table IV.2 shows, the average household size in Konso Special Wereda Zone is higher than those in the other zones of SNNP Region. The relationship between the average household sizes across different size of land holding is almost similar in all zones of the region. That is, as area size increases the average household size also increases.

4. LAND AREA AND FRAGMENTATION BY TYPE OF LAND USE AND SIZE OF HOLDING

Land area is referred to area under all private holdings. In general, the total area of a holding consists of land in the following classifications:

- i. Agricultural land (that includes land under temporary as well as permanent crops, fallow land and grazing land)
- ii. Woodland or forest
- iii. All other land that is, unused and undeveloped potentially productive land, homestead, ...etc.

On the other hand, land fragmentation is the breaking down of land holdings into parts with some distance apart from one another. Land fragmentation is measured by the number of parcels that are reported in the total land holdings of a holder. In general, a parcel of a holding is any pieces of land entirely surrounded by other land, water, road, forest or other boundaries that are not part of the holding.

4.1. Land Area By Type Of Land Use

As presented in Summary Table IV.3, the total land holding area under different land uses was estimated to be about 1,542,534 hectares, in the region. This area is composed of 98.7% of the rural holdings and 1.3% of the urban holdings. Of this land, area under temporary crop accounted for 799,863 hectares (51.9%); land under permanent crops estimated to be 285,385 hectares (18.5%); grazing land account to be 204,882 hectares (13.3%); fallow land is reported to be 152,253 hectares (9.9%); woodland accounted to be 44,441 hectares (2.9%) and land for other uses is estimated to be 55,710 hectares (3.6%).

The census result indicated that out of the total estimated holders (2,449,523) almost all (2,339,130) used their holding for other land purposes which is followed by 2,227,399 holders who had used their holding to cultivate temporary crops. It was also reported that 2,211,516 holders used their land for cultivating permanent crops and 1,337,024 for grazing. On the other hand, the number of holders who left their land as fallow during the census year and those who reported woodland account for about 941,196 and 679,469, respectively. In general, the regional average size of land holding per holder was estimated to be 0.63 hectare. The result also shows that the highest average size of land holding area per holder is for the cultivation of temporary crops, which was estimated at 0.36 hectare and followed by fallow land, which is about 0.16 hectare. (For details, refer to Summary Table IV.3 and Figure IV.3).

***Note:** The number of holders and parcels that reported under land use classification are not mutually exclusive.*

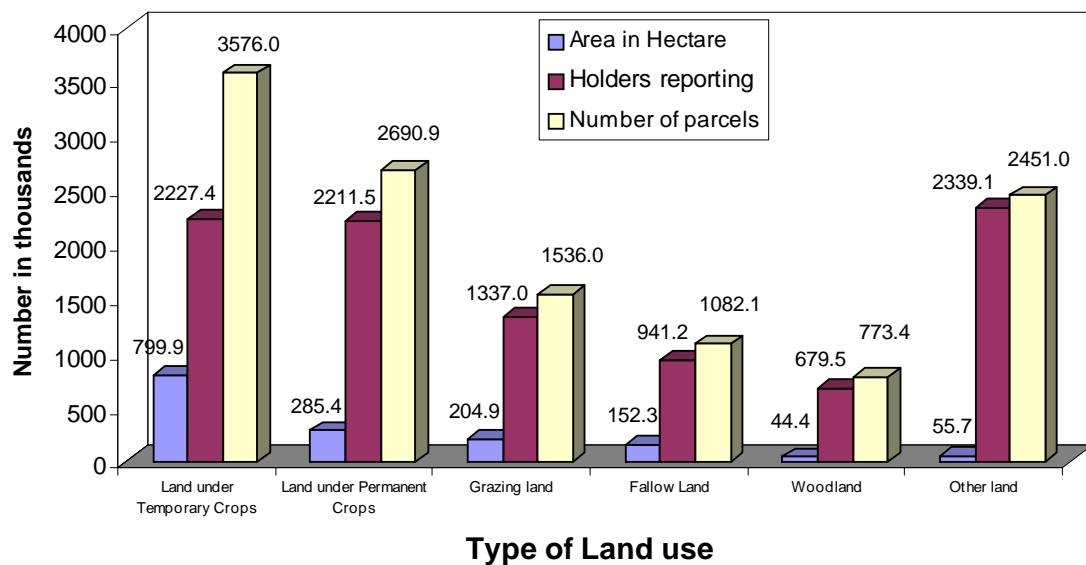

In rural private holdings, the total land area under different land uses was estimated to be 1,522,028 hectares contributing 98.7% to the regional total land area. Out of this total land area, the highest (51.6%) and lowest (2.9%) proportions of areas were used for cultivating temporary crops and as woodland, respectively. The average size of land holding was estimated to be 0.63 hectare per holder. Moreover, the highest average size of land holding per holder was reported as area under temporary crops (0.36 hectare), followed by land under fallow, which is about 0.16 hectare (See Summary Table IV.3).

On the other hand, in urban private holdings, the total land area under both temporary and permanent crops was estimated to be 20,506 hectares contributing 1.3% to the regional total land area. Out of which temporary crops accounted for 14,436 (70.4%) hectares and

permanent crops accounted for only 6,070 (29.6%) hectares. From the census data one can observed that the majority of urban holders in SNNP Region tend to use most of their land for growing permanent crops (38,315), which is followed by temporary crops (37,963). In general, the average size of land area per holder was estimated to be 0.42 hectare. With regards to temporary and permanent crops, average size of land holding per holder was estimated to be 0.38 hectare and 0.16 hectare, respectively (See Summary Table IV.3).

Of the total land area recorded in SNNP Region, the largest area is contributed by Guraghe Zone (17.9%), followed by Sidama Zone (13.6%). In most zones of the region, over 50 percent of land use was allotted to the cultivation of temporary crops. On the other hand, in Gedeo Zone land under permanent crops was relatively larger than that reported in the other zones. Similarly reported grazing land and woodland was relatively larger in Guraghe Zone. However, fallow land is more exercised in Burji Zone. The average size of area per holder ranges from 1.22 hectares in Yem Special Zone to 0.34 hectare in Gedeo Zone.

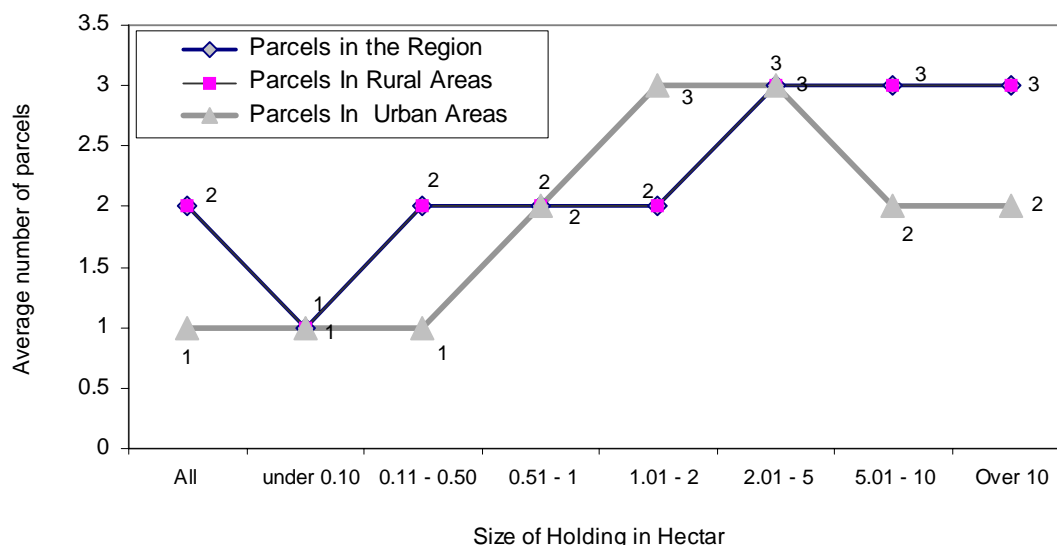

Figuer IV.3 Distribution of Area, Holders and Parcels by type of land use, for private holdings

4.2. Land Fragmentation By Size Of Holding

Providing information on land fragmentation is important to show how farmers waste their valuable working time, energy and other resources when the numbers of parcels are many and very far apart from one another. Taking this into consideration in the 2001/2002 EASE, data on number of parcels was collected for private holding in rural and urban areas of the region. Accordingly, the census result indicates that 4,553,265 parcels were estimated under the total land holdings in the region, which constituted 98.5% of rural holdings and 1.5% of urban holdings. Of this total parcels, the highest and smallest number of parcels or fragmentation of land are reported in area size of holding 0.10 to 0.50 hectare (40.5%) and over 10 hectares (0.1%), respectively. Generally, temporary and permanent crops were cultivated on 3,576,011 parcels and 2,690,878 parcels, respectively. Moreover, grazing land, fallow land, woodland and land for other purpose were found on 1,535,973 parcels, 1,082,053 parcels, 773,439 parcels and 2,451,049 parcels, respectively. However, the number of parcels reported by land use categories is not mutually exclusive. The average size of land area per parcel and average number of parcels per holder were estimated to be about 0.34 hectare and two parcels, respectively (See Summary Table IV.3, Summary Table IV.4 and Figure IV.4).

Figure IV.4: Average Number Of Parcels By Size Of Holdings In Rural And Urban Areas, For Private Holdings

In rural areas, the average number of parcels per holder was estimated at 2 parcels and the average area per parcel was 0.34 hectare. On the other hand, in urban areas, the extent of land fragmentation is estimated and the average number of parcels per holder is found to be one while the average size of land area per parcel is 0.29 hectare. For details refer to Summary Table IV.4.

The census result reveals that the highest number of parcels or land fragmentation was Observed in Sidama Zone, followed by Guraghe Zone with corresponding estimated number of 817,455 (18.0%) parcels and 707,573 (15.5%) parcels, respectively. In Shaka, Yem Special, Burji Special and Konso Special Wereda Zones the average number of parcels per holder were estimated to be three parcels (See Summary Table IV.3).

5. CROPLAND AREA BY CROP CATEGORIES

The 2001/02 (1994 E.C.) Agricultural Sample Enumeration covered the area under temporary and permanent crops in Meher/main and Belg seasons. In general, cropland area is described as part of the total land area, which comprises land under temporary and permanent crops.

5.1. Cropland Area Under Meher/Main Season

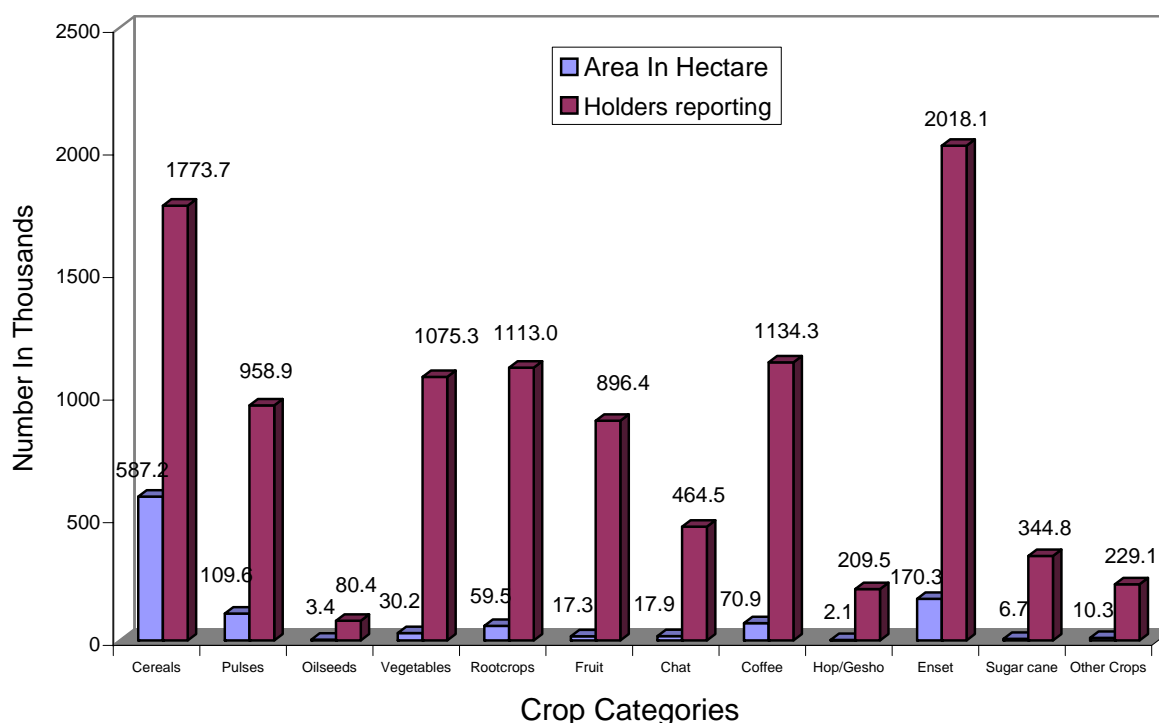

The data in Summary Table IV.5 illustrates that the total cropland area for Meher/ main season in the region was estimated to be 1,085,248 hectares, which consisted of 98.1% in rural and 1.9% in urban areas of private holdings. Out of the total cropland, area under temporary crops accounted to 73.7% and the remaining was the share of permanent crops. Considering the area under temporary crops, cereals, followed by pulses, which accounted for 73.4% and 13.7%, respectively, covered the highest proportion. Of all the area under permanent crops, enset crops took the largest area, which account for 170,273 hectares (59.7%) and the smallest was area under other permanent crops, which covered about 338 hectares (0.1%). Among the total holders in the region who grows temporary crops (2,227,399), the largest number of holders (1,773,719) was cultivating cereals followed by holders (1,113,046) producing root crops. Similarly, among all holders (2,211,516) that are involved in growing permanent crops, the highest number (2,018,107) are growing enset crops while the lowest number of holders (45,113) are cultivating other permanent crops. The overall average cropland area per holder in the region was estimated to be 0.45 hectare while area under temporary and permanent was estimated to be 0.36 hectare and 0.13 hectare, respectively. (See Summary Table IV.5 and Figure IV.5).

In rural areas, temporary and permanent crops contribute about 73.8% and 26.2%, for private holdings, respectively. Out of the total area under temporary crops, the largest cultivated area was under cereal crops, followed by pulses, which contribute about 575,655 hectares (73.3%) and 108,694 hectares (13.8%), respectively. The numbers of holders producing these crops were estimated to be about 1,740,657 and 953,211 with corresponding average size of land area per holder of about 0.33 hectare and 0.11 hectare, respectively. (For details, refer to Summary Table IV.5).

In urban areas, the total cropland area is estimated to be 20,506 hectares, of which temporary crops and permanent crops accounted for 70.4% and 29.6%, for private holdings, respectively. Considering the total areas under temporary crops, cereals accounted for 11,525 hectares (79.8%) and the corresponding holders that cultivated cereal crops are estimated to be 33,062. Among land under permanent crops, enset crops took the highest cultivated area i.e., 3,055 hectares (50.3%) and operated by 30,098 holders (See Summary Table IV.5).

The highest average area under temporary crops was reported as 1.02 hectares per holder in Yem Special Zone, followed by Derashe Special Zone, which was 0.77 hectare per holder. The largest permanent cropland area was also estimated in Sidama Zone, followed by Guraghe Zone, which is estimated at 83,244 hectares and 38,983 hectares, respectively. Out of the total areas under permanent crops in Sidama Zone, enset crops covered about 58.2% of the area, followed by coffee that covered an area of 20,852 (25.1%) hectares.

5.2. Cropland Area Under Belg Season

The census result indicated that in the rural private holdings about 308,946 hectares of land was cultivated under temporary crops during Belg season and the estimated total number of holders practicing Belg season crops were found to be 1,700,712. Of the total temporary cropland area, cereals took the highest share of the cultivated area (67.8%). The overall average area per holder during Belg season was estimated at 0.18 hectare (See Summary Table IV.6).

Summary Table IV.6: Area Under Crop Categories And Number Of Holders- Belg season

Type of Crop Categories	Area in Hectare		Holders reporting	Average area per holder
	Number	%		
RURAL				
All temporary crops	308946	100.0	1700712	0.18
Cereals	209526	67.8	1312778	0.16
Pulses	48664	15.8	751668	0.06
Oilseeds	468	0.2	18703	0.03
Vegetables	7289	2.4	462431	0.02
Root crops	42075	13.6	754630	0.06
Other temporary crops	924	0.3	28592	0.03

Note: Data users should not attempt to sum up cropland area under Belg season to the total land use area since the Belg season cropland area is part of the total land use area. However, providing Belg season information in this section is to show only how the holders shift the Meher/main season cropland area, fallow land and/or any other land into Belg season. On the other hand, data on Belg season crops of the urban area was not covered in the census.

6. AREA UNDER LAND TENURE SYTEMS

Land tenure refers to the arrangements or rights under which the holder uses or owns the land of the holding. In this Agricultural Sample Census, tenure system is classified into three categories. The first is land owned or held in owner like possession having recognition from local government/ Kebele; the second is land rented from other person either in cash or proper share of the produce or other rental agreement and the third is land possession in other forms (neither owned nor rented such as land given temporarily to others without any rental agreement or any other means). Based on this concept, data on land tenure systems was collected and the result indicates that of the total land area (1,542,534 hectares), land owned by the operators accounted for 1,427,332 hectares (92.5%), land rented from other person accounted for 60,644 hectares (3.9%) and land obtained from other system was estimated to be 54,558 hectares (3.5%) in the region. Of the total holders (2,449,523) in the region, 2,413,348 holders owned the land they operated, while 219,763 holders operated the land by rental agreement and 204,216 holders used the land in other system of tenure. The average size of area per holder by type of tenure is estimated to be 0.59 hectare (for land owned), 0.28 hectare (for rented land) and 0.27 hectare (other tenure) (Refer Summary Table IV.7 and Figure IV.6).

Similarly in rural private holdings, of the total area (1,522,028 hectares), most of land area was accounted to the title of ownership, which is estimated to be 1,409,440 hectares (92.6%) and operated by 2,366,073 holders. The average size of land area per holder under land owned and rented is 0.6 hectares and 0.27 hectare, respectively, and the same 0.27-hectare average area is observed in other tenure systems (See Summary Table IV.7).

***Note:** Holders that reported different type of land tenure systems should not be summed up to get the total number of holders since these holders are not mutually exclusive in each tenure systems.*

In urban private holdings, the tenure system is slightly different in which the proportion of land owned is 87.3% and that of rented land is 9.2%. On the other hand, the average size of land holding by type of tenure is estimated to be about 0.38 hectare, 0.43 hectare and 0.33 hectare per holder for land owned, land under rent and land under other tenure system, respectively. In urban areas the average size of rented land area per holder (0.43 hectare) is slightly greater than that reported in rural areas (0.27 hectare) (See Summary Table IV.7). Summary Table IV.7 also presents the distribution of land tenure systems for the zones. As indicated in the table, in all the zones the proportion of owned land was the highest, and followed by rented land in most zones. The proportion of rented land in Kaffa Zone was 11,182 hectares (18.4% of regional rented land area) and this percentage was relatively higher compared to those in the other zones.
