1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and above who live in South Africa. However, this report will only cover labour market activities of persons aged between 15 and 64 years.

This report presents the key findings of the QLFS conducted in January–March, 2009 (Q1:2009).

2. Highlights of the results

Table A: Key labour market indicators

	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on- year change	P-value (Qrt to Qrt)
	Thousand					
Population 15–64 yrs	30 608	30 894	30 987	93	379	
Labour force	17 814	17 718	17 820	102	6	0,14
Employed	13 623	13 844	13 636	-208	13	0,01
Formal sector (Non-agricultural)	9 342	9 537	9 449	-88	107	0,21
Informal sector (Non-agricultural)	2 319	2 246	2 150	-96	-169	0,04
Agriculture	799	764	738	-26	- 61	0,35
Private households	1 163	1 298	1 299	1	136	0,97
Unemployed	4 191	3 873	4 184	311	- 7	0,00
Not economically active	12 794	13 176	13 166	-10	372	0,89
Discouraged work-seekers	1 177	1 168	1 215	47	38	0,23
Other (not economically active)	11 617	12 008	11 951	-57	334	0,39
Rates (%)						
Unemployment rate	23,5	21,9	23,5	1,6	0,0	0,00
Employed / population ratio (Absorption)	44,5	44,8	44,0	-0,8	-0,5	0,00
Labour force participation rate	58,2	57,3	57,5	0,2	-0,7	0,47

Due to rounding, numbers do not necessarily add up to totals.

The number of South Africans in the labour force increased by 102 000 from Q4:2008 to reach 17 820 000 in Q1:2009. Table A shows that employment decreased by 1,5% between Q4:2008 and Q1:2009. A total number of 208 000 jobs were lost between the two quarters, with most job losses recorded within the informal sector (96 000), followed by the formal sector (88 000). Compared to Q1:2008, there was an annual increase of 0,1% (13 000) in employment.

While employment fell by a substantial 208 000 from Q4:2008, this decline was not sufficient to erase the gains that occurred over the course of 2008. As a result, employment in Q1:2009 was still 13 000 above the level of a year ago. Similarly, the even larger increase in unemployment from Q4:2008 (311 000) still left unemployment slightly below the level of a year ago by 7 000.

3. Employment

Table B: Employment by industry

	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on- year change	Qrt to Qrt change	Year-on- year change
	Thousand					Percent	
Both sexes	13 623	13 844	13 636	-208	13	-1,5	0,1
Agriculture	799	764	738	-26	-61	-3,4	-7,6
Mining	333	321	333	12	0	3,7	0,0
Manufacturing	1 988	1 944	1 882	-62	-106	-3,2	-5,3
Utilities	95	86	100	14	5	16,3	5,3
Construction	1 112	1 191	1 126	-65	14	-5,5	1,3
Trade	3 156	3 164	3 021	-143	-135	-4,5	-4,3
Transport	747	774	757	-17	10	-2,2	1,3
Finance	1 667	1 636	1 725	89	58	5,4	3,5
Community and social services	2 564	2 661	2 651	-10	87	-0,4	3,4
Private households	1 163	1 298	1 299	1	136	0,1	11,7
Other		5	5	0		0,0	.

*Due to rounding, numbers do not necessarily add up to totals.

Table B indicates that between Q4:2008 and Q1:2009, job losses were recorded in most industries, with most of them being in Trade which accounted for 143 000 of the job losses, followed by construction (65 000), Manufacturing (62 000) and Agriculture (26 000).

The year-on-year comparisons also show that job losses were experienced in Trade (135 000) followed by Manufacturing (106 000) and Agriculture (61 000), although there was an overall increase in jobs created between Q1:2008 to Q1:2009 (13 000).

Table C: Employment by province

	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on-year change	Jan–Mar 2009
	Thousand					% share
Total	13 623	13 844	13 636	-208	13	100,0
Western Cape	1 902	1 931	1 965	34	63	14,4
Eastern Cape	1 316	1 358	1 311	-47	-5	9,6
Northern Cape	306	316	278	-38	-28	2,0
Free State	838	829	812	-17	-26	6,0
KwaZulu Natal	2 562	2 631	2 514	-117	-48	18,4
North West	901	895	885	-10	-16	6,5
Gauteng	4 019	4 079	4 030	-49	11	29,6
Mpumalanga	894	934	936	2	42	6,9
Limpopo	886	870	905	35	19	6,6

*Due to rounding, numbers do not necessarily add up to totals.

Table C shows that between Q4:2008 and Q1:2009, employment decreased in most provinces except Western Cape, Mpumalanga and Limpopo. The highest number of job losses was observed in KwaZulu-Natal (117 000) followed by Gauteng (49 000) and Eastern Cape (47 000).

The year-on-year comparisons (Q1:2008 and Q1:2009) show a similar pattern, whereby job losses were experienced in the same provinces, except Gauteng, with KwaZulu-Natal being the hardest hit province.

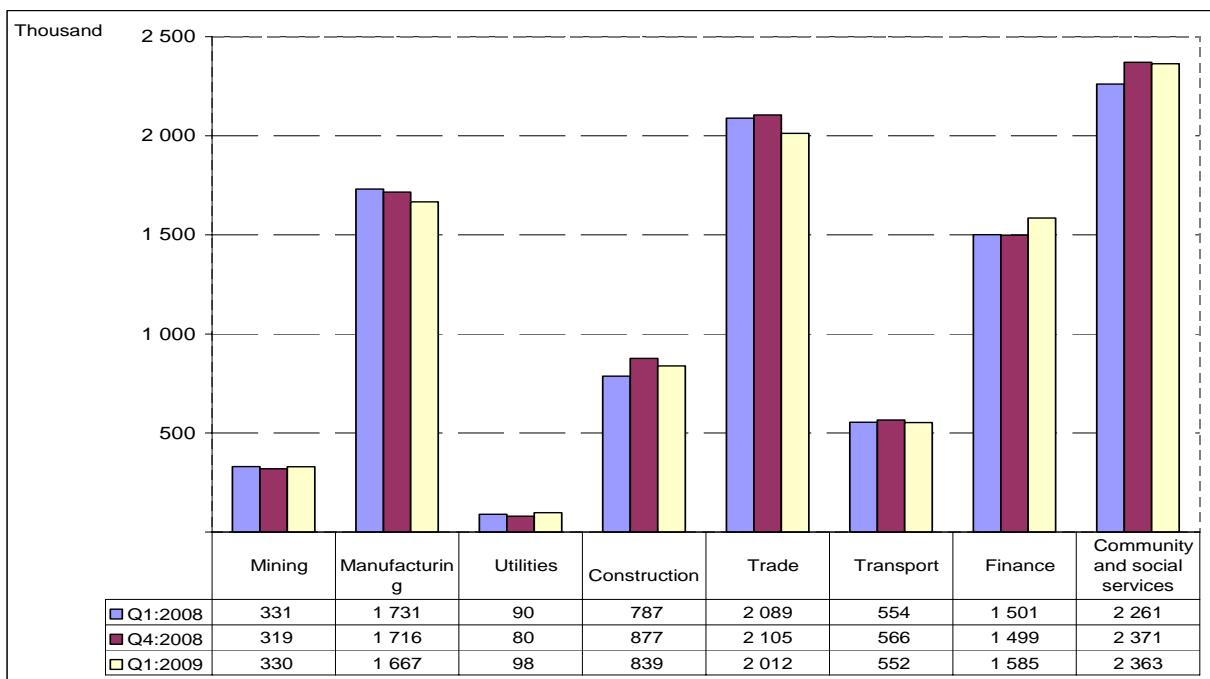

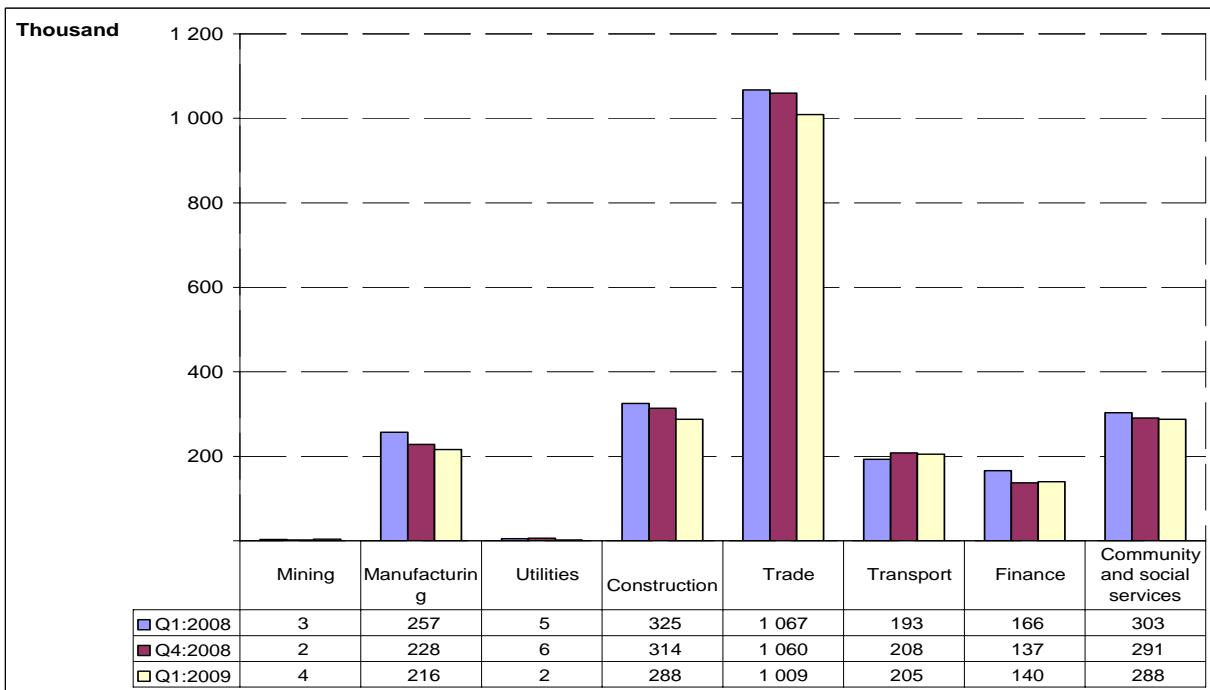

Figure 1: Formal sector employment by industry

Figure 1 shows that there was a decrease of 88 000 formal sector jobs between Q4:2008 and Q1:2009 with the most affected industries being Trade (93 000), Manufacturing (49 000) and Construction (38 000).

The year-on-year comparisons show a net gain of 107 000 jobs in the formal sector although some industries such as trade and manufacturing experienced job losses.

Figure 2: Informal sector employment by industry

Similar to the formal sector, the informal sector also shed some jobs, especially in the Trade (51 000), Construction (26 000) and Manufacturing (12 000) industries.

Contrary to the formal sector, there was an annual decrease of 169 000 jobs in the informal sector.

Table D: Employment by occupation

	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on- year change	Qrt to Qrt change	Year-on- year change
	Thousand				Percent		
Both sexes	13 623	13 844	13 636	- 208	13	-1,5	0,1
Manager	955	1 083	1 053	- 30	98	-2,8	10,3
Professional	744	747	795	48	51	6,4	6,9
Technician	1 435	1 516	1 496	- 20	61	-1,3	4,3
Clerk	1 478	1 434	1 403	- 31	- 75	-2,2	-5,1
Sales and services	1 802	1 732	1 780	48	- 22	2,8	-1,2
Skilled agriculture	124	109	118	9	- 6	8,3	-4,8
Craft and related trade	1 951	1 881	1 809	- 72	- 142	-3,8	-7,3
Plant and machine operator	1 140	1 207	1 217	10	77	0,8	6,8
Elementary	3 062	3 092	2 934	- 158	- 128	-5,1	-4,2
Domestic worker	931	1 042	1 031	- 11	100	-1,1	10,7
Other		1					

*Due to rounding, numbers do not necessarily add up to totals.

Table D shows a decrease in the number of individuals employed in various occupations, with the biggest quarterly decrease recorded in elementary occupations where 158 000 jobs were lost. This was followed by occupations in craft and related trade (72 000), clerical (31 000) and managerial (30 000) occupations.

The year-on-year comparisons also show that the shed jobs were mostly in craft and related trade, elementary and clerical occupations (142 000, 128 000 and 75 000 respectively).

4. The unemployed population

Table E: Unemployed by sex

Unemployed	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on-year change	Qrt to Qrt change	Year-on-year change
	Thousand				Percent		
Total	4 191	3 873	4 184	311	- 7	8,0	-0,2
Men	1 982	1 804	2 036	232	54	12,9	2,7
Women	2 209	2 070	2 148	78	- 61	3,8	-2,8

*Due to rounding, numbers do not necessarily add up to totals.

Table E shows that between Q4:2008 and Q1:2009 the number of unemployed persons increased by 311 000 from 3,9 million to 4,2 million. This increase was higher among men (12,9% or 232 000) compared to women (3,8% or 78 000).

The year-on-year comparisons show that the number of unemployed persons remained virtually unchanged, with the annual decline of 2,8% (61 000) among women being offset by an increase of 2,7% (54 000) among men.

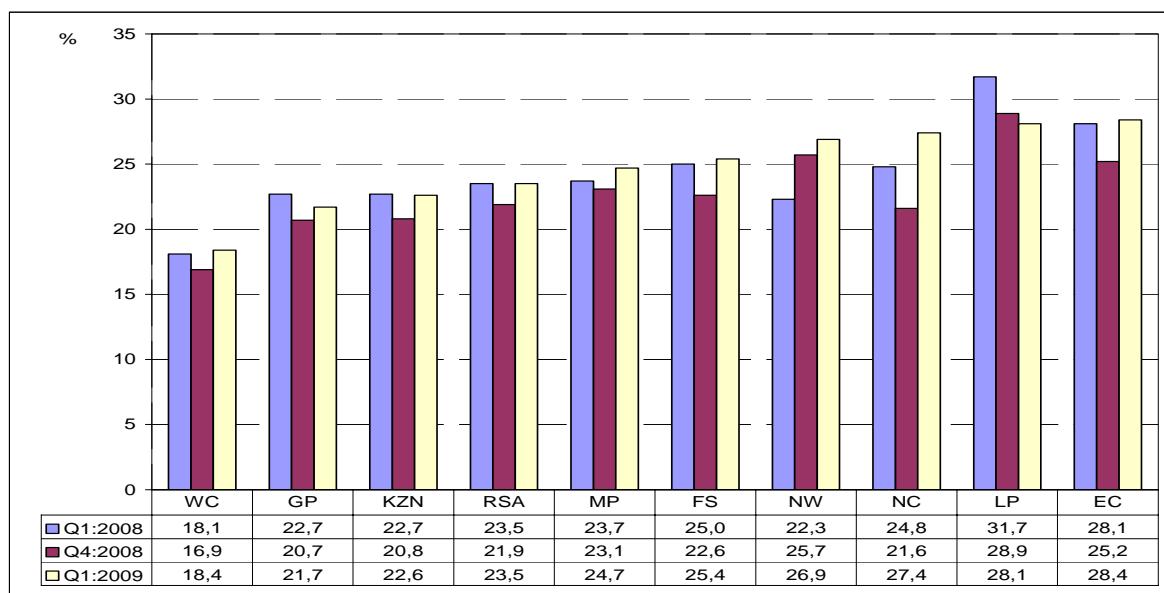

Figure 3: Unemployment rate by province

Figure 3 shows an unemployment rate increase in all provinces in Q1:2009 compared to the unemployment rates of Q4:2008 with the exception of Limpopo where it declined from 28,9% to 28,1%. The biggest increase was in Northern Cape (5,8 percentage points) followed by Eastern Cape (3,2 percentage points) and Free State (2,8 percentage points).

The comparisons between Q1:2008 and Q1:2009 indicates that the unemployment rate increased in six of the nine provinces. The highest increase was in North West (up by 4,6 percentage points) followed by Northern Cape (up by 2,6 percentage points). Gauteng, KwaZulu-Natal and Limpopo experienced declines in the unemployment rates in the same period.

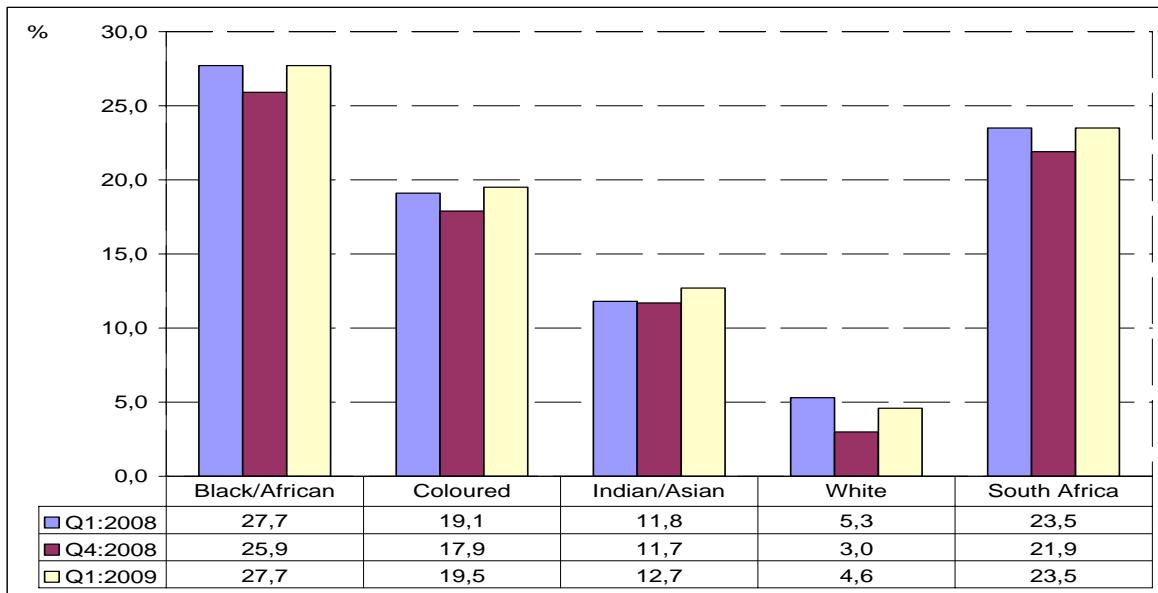

Figure 4: Unemployment rate by population group

Figure 4 shows that the unemployment rate increased across population groups between Q4:2008 and Q1:2009.

The year-on-year comparisons show that it remained unchanged among Black Africans; increased among Coloureds and Indians, and decreased among Whites.

Table F: Characteristics of the unemployed

	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on- year change	Qrt to Qrt change	Year-on- year change
	Thousand					Percent	
Unemployed							
Total	4 191	3 873	4 184	311	-7	8,0	-0,2
Job losers	1 232	1 202	1 360	158	128	13,1	10,4
Job leavers	383	342	357	15	-26	4,4	-6,8
New entrants	1 733	1 679	1 785	106	52	6,3	3,0
Re-entrants	286	177	188	11	-98	6,2	-34,3
Other	557	474	494	20	-63	4,2	-11,3

Table F shows that between Q4:2008 and Q1:2009 job losers accounted for most (158 000) of the observed increase in the levels on unemployment to 311 000, followed by new entrants (106 000).

Compared to Q1:2008, a similar pattern is observed where an increase of 128 000 or 10,4 % was among job losers in Q1:2009, although this was offset by a decline in the number of re-entrants (98 000) resulting in a net decline of 7 000 in the number of persons unemployed over this period.

5. Characteristics of the not economically active population

Table G: The not economically active

Not economically active	Jan–Mar 2008	Oct–Dec 2008	Jan–Mar 2009	Qrt to Qrt change	Year-on- year change	Qrt to Qrt change	Year- on-year change
	Thousand					Percent	
Total	12 794	13 176	13 166	- 10	372	-0,1	2,9
Student	5 514	5 825	5 634	- 191	120	-3,3	2,2
Home-maker	2 392	2 608	2 693	85	301	3,3	12,6
Illness/disability	1 845	1 789	1 767	- 22	- 78	-1,2	-4,2
Too old/young to work	970	1 026	1 042	16	72	1,6	7,4
Discouraged	1 177	1 168	1 215	47	38	4,0	3,2
Other	896	761	816	55	- 80	7,2	-8,9

Due to rounding, numbers do not necessarily add up to totals.

Table G shows that the not economically active population decreased by 10 000 persons between Q4:2008 and Q1:2009. There was a drop in the number of students that are not economically active (191 000) and there was an increase of 47 000 in the number of discouraged work-seekers.

The year-on-year changes show that overall there is an increase in the number of not economically active persons (372 000 or 2,9%) between Q1:2008 and Q1:2009. Home-makers (301 000) and students (120 000) contributed the most to the increase of 372 000 among the not economically active persons and the discouraged work-seekers accounted for 38 000 of the increase.

P J Leholha
Statistician-General: Statistics South Africa

6. Technical notes

6.1. Response details

Table H: Response rates by province

Province	Jan–Mar 2009
	Percent
Western Cape	84,5
Eastern Cape	96,9
Northern Cape	89,7
Free State	94,5
KwaZulu-Natal	95,7
North West	95,2
Gauteng	88,2
Mpumalanga	97,2
Limpopo	98,6
South Africa	93,1

6.2. Survey requirements and design

The Quarterly Labour Force Survey frame has been developed as a general purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter.

The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 census, the country was divided into 80 787 enumeration areas (EAs). Stats SA's household-based surveys use a Master Sample of Primary Sampling Units (PSUs) which comprises of EAs that are drawn from across the country.

The sample is designed to be representative at the provincial level and within provinces at the metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal. This implies, for example, that within a metropolitan area the sample is representative at the different geography types that may exist within that metro.

The current sample size is 3 080 PSUs. It is divided equally into four sub-groups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the redesigned Labour Force Survey (i.e. the QLFS) is based on a stratified two-stage design with probability proportional to size (PPS) sampling of primary sampling units (PSUs) in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

6.3. Sample rotation

Each quarter, a $\frac{1}{4}$ of the sampled dwellings rotate out of the sample and are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings will remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters and a new household moves in then the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (unoccupied).

6.4. Weighting

The sampling weights for the data collected from the sampled households are constructed so that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demographic Division of Stats SA.

6.5. Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire); edit failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents; and weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.).

6.6. Final survey weights

The final survey weights are constructed using regression estimation to calibrate to the known population counts at the national level population estimates (which are supplied by the Demography Division) cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0–4, 5–9, 10–14, etc, and 65 and over. The provincial level age groups are: 0–14, 15–34, 35–64, and 65 years and over. The calibrated weights are constructed such that all persons in a household would have the same final weight.

6.7. Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in agriculture in the province of Western Cape, number of females employed in manufacturing, etc.

6.8. Reliability of the survey estimates

Because estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation etc., as well as errors from non-response and incomplete reporting. These types of errors cannot be measured readily. However, to the extent possible, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors. The variance estimation methodology is discussed below.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys, such as the QLFS, are the Taylor-series Linearization, Jackknife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007)¹. The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation** (*cv*) provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value <0,01 then the difference is highly significant; if p-value is between 0,01 and 0,05 then the difference is significant; and if p-value >0,05 then the difference is not significant

¹ Wolter, K. M. (2007), *Introduction to Variance Estimation, 2nd Edition*, Springer-Verlag: New York.

7. Definitions

Discouraged work-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those that contribute to the production of goods and services in the country. There are two types of economic activities, and they are: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household e.g. subsistence farming)

Employed persons are those aged 15–64 years who, during the reference week: did any work for at least one hour; or had a job or business but were not at work (temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working age population that is employed.

Informal employment identifies persons who are in precarious employment situations irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment therefore consist of all persons in the informal sector; employees in the formal sector; and persons working in private households who are not entitled to basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ less than five employees, who do not deduct income tax from their salaries/wages;
- ii) Employers, own account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed plus all persons who are unemployed.

Labour force participation rate is the proportion of the working age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period was below 35 hours per week.

Underutilised labour comprises three groups as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

Unemployed persons are those (aged 15–64 years) who:

- a) Were not employed in the reference week **and**;
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview **and**;
- c) Were available for work i.e. would have been able to start work or a business in the reference week **or**;

- d) Had not actively looked for work in the past four weeks but had a job or business to start at a definite date in the future and were available.

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years.

Appendix 1
