## Indonesian Susenas, 2009

### Overview

<b>Type</b>	Indonesian Susenas
<b>Identification</b>	au.edu.anu.ada.ddi.01231
<b>Version</b>	Production Date: 2011-02-02 Version 1

### Abstract

The Indonesia Social and Economic Survey (Susenas) is a nationwide survey conducted to collect information on social and economics indices. It serves as a main source of monitoring social and economic progress in society. Susenas has been conducted on an annual basis since 1963.

Since 1992, in addition to a basic social and economic questionnaire (core), a more specialised questionnaire was introduced (module). The core questionnaire covers basic information about household and individual characteristics including health, death, education/literacy, employment, fertility and family planning, housing, and household expenditure. This questionnaire is asked annually with only slight modifications over the years. The module is intended to gather more detailed information on specific topics, especially on data that changes less frequently than a year. There are three modules of Susenas and each module is added in a three-year cycle.

In 2009, the module's topic was social life, culture, and education. Unlike previous Susenas, the same sample was used for both core and module questionnaires. It consisted of 291,753 households and was designed to be representative at national, province and district/city levels.

In the archive, the 2009 data are stored in four data files as described below. The four data files can be viewed together here on the on-line catalogue, but will form four separate files when downloaded.

#### 1. Household Characteristics from core questionnaires (Study ID 01231-1)

This file contains information about household characteristics collected from the core questionnaire (Questionnaire VSEN2009.K, Blocks I, II, VI, VII, VIII and IX in the manual). Variables include identification of place, household size, housing information (including physical characteristics of the home and source of fuel), household expenditure (including itemised food and non-food expenditures, average monthly expenditure and household income), other socio-economic information (including health care subsidies and other welfare) and information technology (including mobile phones, computers and internet access).

#### 2. Individual Characteristics from core questionnaires (Study ID 01231-2)

This file contains information about individual characteristics collected from the core questionnaire (Questionnaire VSEN2009.K, Blocks I, II, III, IV and V in the manual). Variables include identification of place, household size, characteristics of the enumerator, household member characteristics (including age, sex, marital status, victim of crime information and frequency of travel), health characteristics (including health complaints and treatment), health information for children under 5 years old (including birth attendants, immunisation and breastfeeding), education of those aged 5 and above (including literacy and reasons for not being in school). employment for those aged 10 and above, and fertility and family planning for females aged 10 and above.

#### 3. Household information on Social Life, Culture and Education from module questionnaires (Study ID 01231-3)

This file contains information about households collected from the module questionnaire (Questionnaire VSEN2009.MSBP, Blocks I, VII and VIII in the manual). Variables include identification of place, welfare and social capital development (including confidence in administrators and neighbours, community relations), and other social characteristics (including use of newspapers and magazines, foster parenting, membership of BKB, and perceptions of sex roles).

#### 4. Individual information on Social Life, Culture and Education from module questionnaires (Study ID 01231-4)

This file contains information about individuals collected from the module questionnaire (Questionnaire VSEN2009.MSBP, Blocks I, II, IV, V and VI in the manual). Variables include identification of place, household size, household member

characteristics (including disabilities), and information about social conditions, culture and education (including clothing, nutrition, sleeping arrangements, care of children, use of media and books, enrolment in education, smoking, exercise and sport, participation in the arts, involvement in the community, travel to school, funding for school, and internet access).

<b>Kind of Data</b>	Survey data
<b>Unit of Analysis</b>	The data set consists of four data files, two for which the household is the unit of analysis (Core questionnaire household data and Module questionnaire household data), and two for which the individual is the unit of analysis (Core questionnaire individual data and Module questionnaire individual data).

<b>Scope &amp; Coverage</b>	
<b>Keywords</b>	Birth control, Children, Child health, Communities, Consumption (Economics), Culture, Demography, Education, Employment, Family, Fertility, Health, Health services, Housing, Information technology, Indonesia, Literacy, Living standards, Mass media, Nutrition, Occupations, People with disabilities, Pollution, Recreation, Sex role, Smoking, Social capital, Social conditions, Social welfare, Transport, Victims of Crime, Water supply
<b>Topics</b>	Non-Australian studies, Demography, Population survey
<b>Time Period(s)</b>	2009
<b>Countries</b>	Indonesia
<b>Geographic Coverage</b>	
National	
<b>Universe</b>	
Households in all provinces in Indonesia	

<b>Producers &amp; Sponsors</b>	
<b>Primary Investigator(s)</b>	, Central Board of Statistics (BPS) of Indonesia
<b>Funding Agency/ies</b>	Indonesian Central Board of Statistics (BPS) Government of Indonesia

<b>Sampling</b>	
<b>Sampling Procedure</b>	
Stratified multi-stage cluster sampling (see notes)	
<b>Weighting</b>	
Weighting variables are included in the data files.	

<b>Data Collection</b>	
<b>Data Collection Dates</b>	start 2009-06 end 2009-09
<b>Data Collection Mode</b>	face-to-face interview
<b>Questionnaires</b>	
Structured	

## Data Processing & Appraisal

### Data Editing

The data were checked by the archive for missing variable and value labels, out of range values and wild codes, logical inconsistencies, and confidentiality. Users should take care when interpreting high values consisting of "9"s or ending in "98" as these may represent missing values or values which were too high to enter in the space allocated for the variable.

### Other Processing

Sampling Procedure Notes:

SUSENAS household data is collected using a stratified multi-stage cluster sampling technique with two strata (urban and rural area) for each district/municipality. Within each district/municipality, this 2-stage cluster sampling method is applied to urban areas, while rural areas sampling follows a 3-stage cluster sampling design. The individual level data were gathered by interviewing the member of the household regarding the data of all household members.

Urban areas are divided into census blocks (CBs), each comprises of about 100 households. The first stage of the sampling comprises choosing a number of CBs using linear systematic sampling. From each selected census block, sixteen households are selected for interview by using linear systematic sampling.

For rural areas, a number of subdistricts (Kecamatan) were selected from the list using the "proportional to size" (PPS) principle, so that the probability of a sub-district being selected is proportional to its size (i.e. number of households). From each selected sub-district, a number of census blocks were selected. Then, from each of these selected CBs sixteen households are selected for interview by using linear systematic sampling.

## Accessibility

### Distributor(s)

Australian Data Archive

### Depositor(s)

Professor Terry Hull, Australian Demographic and Social Research Institute

### Confidentiality

A copy of the Agreement for the Use of Indonesian Data must be signed before the data can be accessed. See Special Permissions below.

### Access Conditions

Restricted access.

There is a special user undertaking. Under the terms of the agreement with the Central Board of Statistics (BPS) of Indonesia the data may only be supplied to staff and students at The Australian National University. Non-ANU staff or students may have access to the data if they obtain written permission from the Head of Dissemination at Statistics Indonesia.

### Citation Requirements

All manuscripts based in whole or in part on these data should:

- (i) identify the data and original investigators by using the recommended bibliographic reference to the data file;
- (ii) acknowledge the Australian Data Archive and, where the data are made available through the Australian Data Archive by another archive, acknowledge that archive;
- (iii) declare that those who carried out the original analysis and collection of the data bear no responsibility for the further analysis or interpretation of them.

## Rights & Disclaimer

### Disclaimer

Use of the material is solely at the user's risk. The depositor, The Australian National University and the Australian Data Archive shall not be held responsible for the accuracy and completeness of the material supplied.
