Preface

Two CWIQ surveys have been undertaken in Liberia - 2007 and 2010. The first survey conducted in 2007 gave regional-based estimates and indicators. In 2010 however, Liberia Institute of Statistics & Geo-Information Services Statistics (LISGIS) conducted the first county-based Core Welfare Indicators Questionnaire Survey (CWIQ). This is the first nationally representative survey where county-level estimates have been derived. The surveys have been used to assess the social and economic situation in the country and have led to more informed and focused debate on how welfare and vulnerability challenges may be tackled. This survey is rich with information on topics such as, literacy and education, employment, household assets and amenities, access, use and satisfaction with basic facilities, vulnerability, subjective well-being, indirect measures of poverty using non-moneymetric measurement and others.

It is important that Government and the development partners strive to expand the economic opportunities for the less privileged and reduce their vulnerability. It is our hope that information in this report will contribute significantly to the development process and form the basis of identifying designing and refocusing welfare intervention strategies and programmes in the country.

Other publications on the 2010 Core Welfare Indicators Questionnaire Survey (CWIQ) include, main report, a fact-sheet, and a CD-ROM with the database and publications.

On behalf of the Government of Liberia, the Liberia Institute of Statistics and Geo-Information Services would like to thank Government of Liberia, the UNDP, FAO and the ILO for their financial support in conducting the first county-based CWIQ survey, and the World Bank for technical assistance in processing, analyzing and publishing this abstract.

Dr. T. Edward Liberty
Government Statistician
Liberia Institute of Statistics & Geo-Information Services Statistics

October 2012

Acknowledgements

This Core Welfare Indicator Questionnaire (CWIQ) Statistical Abstract has been authored and prepared by a team of officers from the Liberia Institute of Statistics & Geo-Information Services Statistics. The team was led by Mr. Richard Nguafan under the guidance of the Director General Dr. T. Edward Liberty.

The authors would like to acknowledge particularly the contributions of various people and institutions, who reviewed and gave comments that led to the improvement of the final statistical abstract.

Special thanks go to the UNDP and the World Bank for their support in validating the data to be used for the analysis. We express gratitude to Ms. Rose Mungai, of the World Bank, for her immeasurable contribution from the inception of data cleaning unto the writing of the final report.

We extend profound thanks to the dedicated survey staff for their invaluable contribution and perseverance in ensuring the completion of the survey and this report.

Finally, we acknowledge the many others who encouraged us and the cooperation of all survey respondents in making the 2010 Core Welfare Indicator Questionnaire (CWIQ) a reality.

Definition of Concepts

- Region: There are five administrative regions in Liberia.
- County: Liberia changed from the local authorities system of administration to the county assembly in 19XX. The country is demarcated into 16 counties out of the existing XX districts. The boundaries of the districts conform to the boundaries of the counties and regional boundaries. County is the lower-level divisions from regions.
- Urban/Rural: The rural/urban classification of localities is population based, with a population size of X,XXX or more being urban and less than X,XXX being rural, as used in earlier census.

DEMOGRAPHIC CHARACTERISTICS

- Population defined here is not the CENSUS definition (de facto count). Population referred here are only persons living in households and excludes persons in Institutions, streets, etc.

EDUCATION AND LITERACY

- Adult Literacy is defined for persons age 15 years and above who can read and write in any language.
- Youth Literacy is defined for persons age 15 to 24 years who can read and write in any language.
- Primary school estimates are defined for children aged 6 to 11 years.
- Access is defined as children currently in primary schools within 5Km of a primary school.
- Enrollment (net) is defined for children currently in primary school (P1 to P6) of primary school age (6-11 years).
- Enrollment (gross) is defined for children currently in primary school (P1 to P6) of all ages.
- Satisfaction is defined for children of all ages currently in primary school who cited no problems with school.
- Secondary school estimates are defined for children aged 12 to 17 years.
- Access is defined for children currently in secondary school in households less than 5km from a secondary school.
- Enrollment (net) is defined for children currently in secondary school (S7 to S9, SH10 to SH12) of secondary school age (12-17 years).
- Enrollment (gross) is defined for children currently in secondary school (S7 to S9 and SH10 to SH12) of all ages.
- Satisfaction is defined for children of all ages currently in secondary school who cited no problems with school.
- Tertiary school estimates are defined for children aged 18 to 24 years.
- Enrollment (net) is defined for children currently in University, Vocational, Technical training and Technical of school age (18-24 years).
- Enrollment (gross) is defined for children currently in University, Vocational, Technical training and Technical of all ages.
- Overall Enrollment (net) is defined for children currently in school of school age (6-24 years).
- Overall Enrollment (gross) is defined for children currently in school of all ages.

HEALTH

- Access is defined for persons less than 5km from a health facility.
- Need is defined for persons sick or injured in the four-week period preceding the survey.
- Use is defined for persons who consulted a health practitioner in the four-week period preceding the survey.
- Satisfaction is defined for persons who consulted a health practitioner in the four week period preceding the survey who cited no problems.

HOUSEHOLD HEAD CHARACTERISTICS

.

Household Head: Is defined as the person in the household recognized as the head by other household members. This is generally the person responsible for the upkeep and maintenance of the household. In his/her absence, the person who takes charge of the household is considered a "temporary head". All household relationships are defined with reference to the head or temporary head.

HOUSEHOLD AMENITIES AND ASSETS

- Improved water sources is defined as having piped water in the dwelling, public outdoor tap, and protected well.
- Improved sanitation is defined for households using a flush toilet (sewer or septic tank), covered pit latrine, Ventilated covered pit latrine (VIP).
- Improved means of waste disposal is defined for households that have their refuse collected or use a public dump.
- Non-wood fuel for cooking is the use of any fuel other than firewood and charcoal for cooking.

ACCESS TO AMENITIES

.

Access is having the nearest specified facility, i.e. primary school, secondary school, health facility, water source, telecommunication facility, public transport and food market, within 5km from the household.

HOUSEHOLD PERCEPTIONS OF WELL-BEING

- Difficulty meeting food needs is defined for households that reported difficulty meeting food needs often or always.
- Household economic situation compared to one year ago: Worse is defined for households that replied much worse now or a little worse now; better is defined for households that replied a little better now or much better now.

Special Notes Concerning Survey

All tables are by region and county unless otherwise specified in the title.

Tables refer to 2010 survey unless specified.

- All percentages are weighted (grossed up) unless otherwise stated.
- To obtain national estimates, the sample figures had to be grossed up by the appropriate factor (weighting co-efficient).
- Because of the effects of rounding, percentages may not always add exactly to 100.
- For the same reasons estimated numbers may not add exactly to the estimated totals shown in the table.
- 0.0 means negligible
- " " or ".." means nil.
- Percentages add up to 100 unless otherwise stated.
- 24 Households members did not state their sex.
Therefore, a total done reflecting sex may show slightly different results when compared to the aggregate where sex is not applied
- 23 (14 missing and 9 coded as 99) household members did not report ages.
Therefore, a total done reflecting age may show slightly different results when compared ti the aggregate where age is not applied
- Missing information is not imputed.

Introduction

Background

However, it was recognized, that not all groups of the society had the same capacity and access to opportunities to deal with the effects of the adjustment process. Poverty is identified as one major factor why many people have little or no access to the basic amenities that are made available as a result of the interventions in the economy. Therefore, more reliable and timely statistical indicators were needed for monitoring poverty and the effects of various development policies, programmes and projects on living standards of the people. Such indicators were not only needed at the national level but at disaggregated levels and for various population sub-groups, especially given the recognition that district-level indicators are crucial for monitoring and evaluating poverty reduction efforts at the lower level.

Objective of the Survey

The main objectives were: -

- To provide simple indicators for monitoring poverty and the effects of development policies and programme on the welfare of Liberians.
- To provide reliable data on a timely basis for monitoring changes in the welfare status of households and various sub-groups of the population at the district level.
- To ensure rapid data capture, processing, tabulation and analysis.
- To ensure optimal precision by the use of as large a sample as is feasible given national statistical resource constraints and the need for rapid results in generating district-level indicators.
- To eliminate data entry bottlenecks through the use of “scanning” technique with Optical Character Recognition (OCR).

Sample Design

An updated list of Enumeration Areas is maintained at the LISGIS, with urban and rural demarcation for each county. Greater Monrovia, was separated from the rest of Montserrado County due to its peculiar socio-demographic characteristics. Enumeration areas were selected separately from the urban and rural listings for each county. At the first stage, the required number of EAs was selected in each stratum with probability proportional to size (PPS), where the measure of size is the number of households listed in the census. At the second stage, a fixed number of households (12) were taken by systematic sampling within each EA that was picked at the first stage.

While the overall number of EAs has increased by just over 50 percent, there is a marked contrast in what has happened to urban and rural EAs: the number of urban EAs has almost trebled, while the number of rural EAs has increased by less than 10 percent. This increase in urban EAs is due mainly to two factors: first, the movement of people from rural to urban areas; and secondly, a change in the designation of what counts as an urban area. In the 1984 Census, urban areas in each county “consisted mainly of the county capitals”. For the 2008 Census, a much broader definition was used, with all settlements of 2000 or more persons being counted as urban. The ratio of urban to rural EAs has thus changed from 25:75 in 1984 to 46:54 in 2008.

Proposed design for LFS/CWIQ 2009						
County				No. of EAs selected		
	Urban	Rural	Total	Region	Urban	Rural
<u>Bomi</u>	24	12	36	North western	48	48
Grand Cape Mount	16	16	32			
<u>Gbarpolu</u>	8	20	28			
Montserrado (ex GM)	16	16	32	South central	48	48
Margibi	16	16	32			
Grand Bassa	16	16	32			
<u>River Cess</u>	3	25	28	South eastern A	48	48
<u>Sinoe</u>	16	16	32			
<u>Grand Gedeh</u>	29	7	36			
<u>Rivergee</u>	16	16	32	South eastern B	48	48
Grand Kru	6	22	28			
Maryland	26	10	36			
Bong	16	16	32	North central	48	48
<u>Nimba</u>	16	16	32			
<u>Lofa</u>	16	16	32			
Greater Monrovia	60	0	60	Greater Monrovia	60	0
Total	300	240	540	Total	300	240

It is also clear from the table that the trends have not been consistent across all counties. Only one county (Sinoe) saw a drop in the number of urban EAs it contains, whereas several other counties saw massive increases in the number of urban EAs.

Survey Instruments

The Core Welfare Indicators Questionnaire (CWIQ) 2010 adopted a house-based questionnaire which consists of four (4) double-sided pages. To ensure concise responses for the interviews, pre-coded multiple-choice response questions were used. The questionnaire was designed based on eleven (11) distinct modules. These include:-

- Background characteristics of household members
- Education
- Health
- Employment
- Household Assets
- Household Amenities
- Poverty Predictors (based on expenditure on key basic items)
- Child Anthropometry
- Subjective Well-being
- Violence, Crime and Safety
- Communication

Field Organization

Training

Field staff

The training of interviewers was guided by an interviewer's manual. This involved comprehensive and systematic explanations on: the structure and content of the survey questionnaire; basic concepts and definitions to be applied in the execution of the Core Welfare Indicator Questionnaire (CWIQ) survey data collection exercise; interactive discussions; simulated field trials; mock interviews and how to shade a bubble or print (write) numbers in the scannable CWIQ questionnaire. Participants were also trained in the techniques to be used in weighing and measuring children.

Scanning Officers/assistants

The scanning officers and assistants received additional training on the use of scanners to capture the field returns and to use the Core Welfare Indicator Questionnaire (CWIQ) application for data processing. The officers were taken through the process of developing the scannable questionnaire, data scanning, editing, validation, dismantling and reassembling the scanner, replacement of expendable parts and daily routine maintenance of the scanning equipment. The assistants were trained further on the preparation and scanning of questionnaires from the field as well as archiving of the scanned questionnaires to facilitate easy retrieval.

Fieldwork

The data collection exercise for the main survey commenced on 10th February and ended on 22nd April 2010. Sixty-one teams were involved in the fieldwork which comprised a team of one supervisor, three interviewers and one driver. In addition, there were two standby supervisors and six interviewers. As a quality control measure and also boost the morale of the field staff, both scheduled and unannounced extended/extensive field trips were made by the senior project management personnel to check on the logistics, quality and progress of work.

Data Capture and Processing

The survey methodology used a technique of optical character reading that permitted fast processing of data and timely release of results. High-speed scanners and a software known as Teleform were used to automate the entire process of questionnaire design, collection, evaluation, validating and storage of the data.

Scanning of the CWIQ field returns extended beyond the planned 12-week duration due to, the following reasons: -

- The two industrial scanners that had been rehabilitated for the CWIQ data capture could not be utilized due to initial difficulties experienced in calibrating the equipment.

As a result, the entire scanning of the field returns had to rely on two desktop high speed scanners that had been used for the CWIQ training workshops. However, the performance of one of the scanners

- reduced drastically as a result of excessive workload of approximately 12 hours of scanning each day. It had to be removed from the scanning operations after the 12th week and having to rely on one scanner for the rest of the data capture.

- Finally data capture and processing was completed by the end of June 2003 and a clean CWIQ data set was ready for tabulation and analysis.

The data capture and processing of the CWIQ survey data used the following software: -

(a) Teleform

Automated data capture system with three modules

DESIGNER: This is used in designing the CWIQ questionnaire as well as setting export routines.

For converting the questionnaires to electronic images and subsequently evaluating the images. The data evaluated okay are subsequently sent to the target database or system for further processing.

VERIFIER: Used to manually correct or confirm characters or digits that the reader could not interpret or recognized. It was also used to commit batches that have been evaluated as okay.

(b) Microsoft Access

CWIQ has three databases all designed in Microsoft Access:

CWIQTem.mdb - Temporarily stores the data once it is exported from Teleform.

RawData.mdb - Used as a work database where the data is cleaned or validated.

Data.mdb - The main database used to generate tables.

(c) Microsoft Excel

Used to prepare the final output tables for the CWIQ report.

(d) CWIQ Application

The main programme used for data processing. It was developed in Microsoft Access with Visual Basic applications. The CWIQ application has three phases: -

- Conversion/transfer of Teleform data to the temporary database.
- Data validation and error correction.
- Tabulation

The questionnaires were processed in batches with questionnaires from each Enumeration Area (EA) being considered as a single batch. This made it easier to manage the image and also allow the operator to capture all the necessary information about an EA.

Editing took three different forms:-

Manual editing was carried out to ensure that the reference number which was composed of the EA number, Household number and Questionnaire number, was correct and that it was printed out on all pages on the set of questionnaire.

- On-line editing with Teleform application. Mandatory fields that the scanner could not read or accept were held on the screen for verification and correction by the data capture assistant.
- Automatic correction was done for some selected fields by the CWIQ application based on some validation rules within the system.

This table takes into account children in primary or secondary or tertiary irrespective of age.

Primary refers to P1 to P6 irrespective of age and denominator is 6-11 years.

Secondary refers to S7-S9 (Junior Secondary), SH10-SH12 (Senior Secondary) irrespective of age and denominator is 12-17 years.

Tertiary refers to University, Vocational, Technical Training and Technical irrespective of and denominator is 18-24 years.

Overall refers to Primary, Secondary and Tertiary irrespective of and denominator is 6-24 years.

This table takes into account children currently enrolled in primary and aged 6-11 years; secondary and aged 12-17 years and tertiary aged 18-24 years.

Primary refers to P1 to P6, aged 6-11 years and denominator is 6-11 years.

Secondary refers to S7-S9 (Junior Secondary), SH10-SH12 (Senior Secondary) aged 12-17 years and denominator is 12-17 years.

Tertiary refers to University, Vocational, Technical Training and Technical aged 18-24 years and denominator is 18-24 years.

Overall refers to Primary, Secondary and Tertiary all children enrolled in school aged 6-24 years and denominator is 6-24 years.

Note:

Table 3.14 and 3.16 differ.

Table 3.14 includes all kids aged 12-17 years in secondary school (JSS and SSS).

Table 3.16 includes kids aged 12-14 in Junior Secondary School (JSS) and 15-17 in Senior Secondary School (SSS).

It must be noted there are many over-age kids in JSS and SSS and thus the low net enrolment rates

Table 3.15

* Disability refers to persons who responded an affirmative difficulty (some, a lot and unable).

** Percentages do not add 100% because respondents asked each type of disability. Each category is a proportion of 100%.

N is identical for each category.

* Percentages add to more than 100% because respondents reported multiple categories. Each category is a proportion of 100%.

N is identical for each category.
