

## Information about data sets

Database APK 2008 was prepared in the following way: the data are located in 4 files - data from the four questionnaires (apk\_1, apk\_2, apk\_31, apk\_32) and were prepared in txt format.

All files created with a unique identification of households - an index that is transferred to all the files that users could connect to the data without using the actual identification data.

The files with data from questionnaires apk\_1, indices indicate households and persons. For records where the person = 0, the index does not appear in any other files in the file weight.

File data from questionnaires apk\_31 and apk\_32 prepared in a way that every household summarized the data by code. The file is the code is short and the product name.

Data on the severity of the individuals and households have been prepared as a separate file for each year and also correlate with data from other questionnaires over the index variables.

The files of questionnaires 1 and 2 of the questionnaire can be found and the data with the values 9 or 9 ... 9 ... 8 This means that on these issues, domestic or persons interviewed did not know the answer or refused to answer.
