## YEAR 2010

### CROSS-SECTIONAL DATA

#### **DIFFERENCES BETWEEN DATA COLLECTED (as described in the guidelines) AND ANONYMISED USER DATABASE**

In order to ensure disclosure control and confidentiality of the UDB, some variables collected were removed or changed. On the other hand, in order to ease the use of the data, some variables were added.

This document summarizes the changes between the data collected by countries as described in the 2010 guidelines and the user database.

All income variables are in € (EURO). For the countries not members of the euro area the conversion factor can be found in variables HX010 and PX010 (please see for more details § 1.3.6 below).

### **1.3. VARIABLES ADDED**

#### **1.3.1. *RX010: Age at the time of interview***

A household member coded "80" has 80 or over

RX010 is calculated by subtracting date of birth (in year and month) from date of interview (in year and month). RX010 may vary from one digit compared to real age at the exact day of interview, as the day of birth is not known.

#### **1.3.2. *RX020: Age at the end of income reference period***

A household member coded "80" has 80 or over

A household member coded "-1" is born between the end of income reference period and the data collection

#### **1.3.3. *RX030: Household identification number***

*RX030 = DB030*

#### **1.3.4. *RX040: Work intensity***

Continuous variable from 0 to 1 (People older than 59 has WORK\_INT = 99)

Based on persons aged 18-59 (students excluded)

The work intensity status is assigned to each household member

#### **1.3.5. *RX050: Low work intensity status***

0= no LWI, 1= LWI, 2= N/A)

**1.3.8.      *HX010: Change rate***

Conversion factor: euro / national currency

It 's the average exchange rate based on the year prior to the survey

The value is missing when the national currency is the Euro

**Income data (euro) i. e.  $HY020 * HX010 = \text{income data (national currency)}$**

**1.3.9.      *HX040: Household size***

In practise; number of person pertaining to the same household having an observation in the R-file (personal register file)

**1.3.10.     *HX050: Equivalised household size***

Calculation of equivalised household size

Let

HM<sub>14+</sub> number of household members aged 14 and over (at the end of income reference period)

HM<sub>13-</sub> number of household members aged 13 or less(at the end of income reference period)

The equivalised household size is defined as:

$$HX050 = 1 + 0.5 * (HM_{14+} - 1) + 0.3 * HM_{13-}$$

*1.3.11. HX060: Household type*

- Household members aged between 18 and 24; economically inactive and living with at least one parent.

*1.3.12. HX070: Tenure status*

HX070 is derived from HH020 and is used to calculate all “by tenure status” LAEKEN indicators

HX070 = 1 when HH020= 1 or 4

HX070 = 2 when HH020= 2 or 3

HX070 is missing when HH020 is missing

*1.3.13. HX080: Poverty indicator*

HX080= 0      when HX090 >= at risk of poverty threshold (60% of MEDIAN HX090)

HX080= 1 when HX090 < at risk of poverty threshold (60% of MEDIAN HX090)

*1.3.14. HX090: Equivalised disposable income*

$HX090 = (HY020 + \text{SUM}(PY080G)) * HY025 / HX050$

*1.3.15. HX120 : Overcrowded household*

(0=not overcrowded, 1=overcrowded, .=N/A)

*1.3.16. PX010: Change rate*

Conversion factor: euro / national currency

It 's the average exchange rate based on the year prior to the survey

The value is missing when the national currency is the Euro

Income data (euros) \* PX010 = income data (national currency)

*1.3.17. PX020: Age at the end of the income reference period*

A household member coded "80" has 80 or over

A household member coded "-1" is born between the end of income reference period and the data collection

*1.3.18. PX030: Household identification number*

PX030 = DB030

*1.3.19. PX040: Selected respondent status*

PX040 = RB245

*1.3.20. PX050: Activity status*
