

Project Area	Crops	Panel	Demo Farmer	Non-Demo Farmers	Notes
OI North	Paddy	prioritized those surveyed at baseline	one paddy demonstration farmer, if there was one. If not, then no one surveyed for this category. In control villages, was always the paddy shadow from the SAAO surveyed	From all people that were not paddy demonstration farmers on the rosters collected during the SAAO survey	<ul style="list-style-type: none"> <li>* First-surveyed area</li> <li>* Initially was going to focus on keeping a panel for this round of surveying, but decided during this sampling that we should draw from the entire group. So the sample had to be reconstructed quickly, which makes the do file confusing.</li> <li>* Initially wanted to sample for paddy and mung, as the Shadows were done for in the Barisal DPE, but there were few mung demonstrations, so only did paddy where it was available</li> <li>* If there was no paddy demonstration for a Treatment village, we skipped the demo sample there</li> <li>* If there was a shadow paddy demonstrator and a real demonstrator in a Control village, we picked the Shadow</li> <li>* Prioritized those surveyed at baseline</li> <li>* No replacement for the Demo sample</li> </ul>
Rangpur DPE	Paddy				
Barisal DPE	Paddy or Mung				* Began after a nearly 3 week break for Eid holidays.
OI South	All	prioritized those surveyed at baseline	Sampled for demo crops with preference to the most common demo packages distributed in the Barisal DPE: paddy, mung, mustard, masoor, sesame, wheat (more common but crop not variety adoption, so only added on at very end). For example, sampled a paddy demo where there was one. If not, sampled a mung demo if there was one. Worked the way down the list. If there was a demo in a control, we sampled the real demo. Otherwise, the sample in the control was the shadows	From all people that were not paddy demonstration farmers on the rosters collected during the SAAO survey	<ul style="list-style-type: none"> <li>* Began after Barisal DPE, last area</li> <li>* If there was a real demo in the control village, sampled that one (opposite to the decision in the OI North because this problem was more prevalent here)</li> <li>* Prioritized those surveyed at baseline</li> <li>* No replacement for the Demo sample</li> </ul>
