CHAPTER ONE

INTRODUCTION

1.0 Background

The Bureau of Statistics launched the Continuous Multi-Purpose Household Survey (CMS) in May 2009, with the aim of addressing the need for timely data. With rapid changes in the economy, it was not adequate to have updates once in five year or ten years through the ad hoc surveys and decennial censuses, hence the introduction of CMS.

The primary objective of CMS is to provide permanent platform for the collection of data relevant to compute socio-economic indicators. Each round of the survey collects the same core data on household members' characteristics such as age, sex and marital status. There were also core questions during the first year of CMS, thus, from May 2009 to April 2010, the add on modules requested by stakeholders such as the Millennium Challenge Account (MCA- Lesotho) were incorporated and these included: Water and sanitation module; and health module and Domestic Tourism.

In its second year which started in July 2010 to June 2011 a module on Household Budget Survey (HBS) was incorporated. Since the module on HBS catered for consumption in a detailed manner it is not included in the 2010/2011 CMS quarterly reports. This implies that the second up to the fourth quarters of 2010/2011 CMS focused mainly on economic characteristics of the population.

This report is for the third quarter (February to April) of 2013/2014. The questionnaire for this quarter had an add-on module on water and sanitation which was requested by the Water Commission. This as a result, means that analysis will mainly focus on the economic status of the population; Water and Sanitation and the household economy.

CHAPTER TWO

Economic Characteristics

2.0 Introduction

This chapter focuses on the economic characteristics of the population for the third quarter of CMS 2013/2014 which includes among others: The employed population and industry, usual hours worked, employment status and duration of contract.

Table 2.1 shows the number and percentage distribution of economically active population. It is shown that 59.0 percent of the population in labor force was employed while 41.0 percent was unemployed.

Table 2.1: Number and Percentage Distribution of Economically Active Population, CMS 2013/2014- 3rd Quarter

Labor Force	Frequency	Percent
Employed	422,507	59.0
Unemployed	293,572	41.0
Total	716,079	100.0

Table 2.2 presents the percentage distribution of employed population by occupation and age-groups. It shows that in age-group 25-29 years, high proportion of the population was working as ‘technicians and associate professionals’ and ‘clerical support workers’ with 22.9 and 27.9 percent respectively. Among ‘professionals’, ‘service and sales workers’, ‘craft and related trade workers’ and ‘elementary occupations’, majority of workers were in age-group 30-34 years with 26.0, 20.4, 15.3 and 16.1 percent respectively. High percentage (23.7) of ‘managers’ were in age-group 40-44 years followed by age group 50-54 with 16.8 percent, whereas, the ‘skilled agricultural forestry and fishery workers’ together with ‘plant and machinery operators’ were dominant in age-groups 20-24 and 35-39 years with 17.1 and 20.3 percent respectively.

Table 2.2: Percentage Distribution of Employed Population by Age-groups and Occupation, CMS 2013/2014 - 3rd Quarter

Age Groups	Armed forces	Managers	Professionals	Technicians and associate professionals	Clerical support workers	Service and sales workers	Skilled agricultural forestry and fishery workers	Craft and related trades workers	Plant and machine operators and assemblers	Elementary occupation	Average

Table 2.3 illustrates percentage distribution of employed population by sex and industry. It shows that male population had higher percentages in ‘mining and quarrying’ (94.1), ‘construction’ (94.0) and ‘transport, storage and communication’ (90.3) as compared with females with lower percentages of 5.9, 6.0 and 9.7 in the same industries respectively. For females, the higher percentages were in ‘private household’ with (95.5), ‘manufacturing (78.8) and ‘hotels and restaurant’ (72.5) while their male counterparts had lower percentages of 4.5, 21.2 and 27.5 in the same industries respectively.

Table 2.3: Percentage Distribution of Employed Population by Sex and Industry, CMS 2013/2014 - 3rd Quarter

Industry	Male	Female	Total (%)	Total (N)
Agriculture, hunting and forestry	82.5	17.5	100	106,456
Mining and quarrying	94.1	5.9	100	29,790
Manufacturing	21.2	78.8	100	40,143
Electricity, gas and water supply	79.6	20.4	100	8,221
Construction	94.0	6.0	100	42,267
Wholesale and retail trade, repair of motorvehicles, motor cycles and persons and household goods	41.7	58.3	100	50,214
Hotels and restaurants	27.5	72.5	100	2,935
Transport, storage and communication	90.3	9.7	100	14,810
Financial intermediation	48.4	51.6	100	4,060
Real estate, renting and business activities	43.3	56.7	100	909
Public administration and defense, compulsory social security	70.7	29.3	100	25,343
Education	34.5	65.5	100	16,424
Health and social work	36.6	63.4	100	9,014
Other community, social and personal service activities	42.9	57.1	100	19,798
Private households with employed persons	4.5	95.5	100	52,123
Average	58.2	41.8	100	422,507

Table 2.4 presents the percentage distribution of employed population by industry and hours worked. For manufacturing industry, the highest percentage (64.0) of the employed population worked 41 to 50 hours followed by 20.4 percent for those who worked 51 to 60 hours and the lowest percentage was 0.5 percent which was for those who worked 0 to 10 hours. For mining and quarrying, 60.8 percent of people who worked 41 to 50 hours dominate the industry. Education industry is dominated by people who worked 31 to 40 hours with 54.8 percent followed by 41 to 50 hours with 31.0 percent while the lowest percentage (0.6) is for people who worked 11 to 20 hours.

Table 2.4: Percentage Distribution of Employed Population by Industry and Hours Worked, CMS 2013/2014- 3rd Quarter

Industry	0-10	11-20	21-30	31-40	41-50	51-60	61+	Total (%)	Total (N)
Agriculture, hunting and forestry	3.4	2.9	4.7	11.5	25.2	24.7	27.5	100	106,456
Fishing	0	0	0	0	0	0	0	0	0
Mining and quarrying	1.5	0	0.2	11.9	60.8	18.5	7.1	100	29,790
Manufacturing	0.5	0.9	1.1	3	64	20.4	10.3	100	40,143

Other community, social and personal service activities	4.3	2.2	4.9	19.8	41.4	14.8	12.6	100	19,798
Private households with employed persons	0.9	1.5	2.8	3.9	34.6	18	38.3	100	52,123
Average	2.1	1.6	3.3	12.5	40.1	19.5	20.9	100	422,507

Table 2.5 is an illustration of the percentage distribution of the employed population by occupation and sex. The percentage of female ‘Professionals’ (65.9) exceeded that of males (34.1), while for ‘skilled agricultural, forestry and fishery workers’ ,the percentage of males (80.7) was greater than that of females (19.3 percent). For ‘elementary occupation’, females had a higher percentage of 51.2 as compared to that of males, which was 48.8 percent. The table further indicates that for ‘craft and related trades workers’, males constituted 68.5 percent while females constituted 31.5

Table 2.5 : Percentage Distribution of Employed Population by Occupation and Sex, CMS 2013/2014-3rd Quarter

Occupation	Male	Female	Total (%)	Total (N)
Armed forces	100.0	0.0	100.0	141
Managers	43.8	56.2	100.0	7,494
Professionals	34.1	65.9	100.0	22,034
Technicians and associate professionals	44.4	55.6	100.0	5,487
Clerical support workers	32.5	67.5	100.0	10,472
Service and sales workers	53.9	46.1	100.0	48,573
Skilled agricultural forestry and fishery workers	80.7	19.3	100.0	55,402
Craft and related trades workers	68.5	31.5	100.0	99,459
Plant and machine operators and assemblers	64.7	35.3	100.0	34,141
Elementary occupation	48.8	51.2	100.0	139,304
Average	58.2	41.8	100.0	422,507

Table 2.6 shows the percentage distribution of employed population by sex and employment status. Male population dominated female population in all employment status with the highest percentage (83.7) of ‘contributing family worker’ as compared to the lowest percentage of 16.3 of females. That is followed by male employers that had higher percentage of 66.1 in comparison to female employers with 33.9 percent.

Table 2.6: Percentage Distribution of Employed Population by Sex and Employment Status, CMS 2013/14 -3rd Quarter

Sex	Employee	Employer	Own-account worker	Contributing family worker	Other	Average
Male	55.4	66.1	55.0	83.7	32.2	58.2
Female	44.6	33.9	45.0	16.3	67.8	41.8
Total (%)	100.0	100.0	100.0	100.0	100.0	100.0
Total (N)	299,676	5,826	74,301	41,224	1,479	422,507

Table 2.7 presents percentage distribution of employed population by occupation and duration of contract. It indicates that ‘professionals’ had highest percentage (94.9) of the population whose duration of contract was ‘permanent’ and the lowest percentage of 1.8 with fixed term duration. ‘Skilled agricultural, forestry and fishery workers’ had 40.3 percent of the population with ‘fixed term’ duration of contract followed by 31.2 percent ‘less than 12 months’ duration of contract. In overall, all occupations had highest percentages of population with ‘permanent’ duration of contract except for ‘skilled agricultural forestry and fishery workers’.

Table 2.7: Percentage Distribution of Employed Population by Occupation and Duration of Contract, CMS 2013/14- 3rd Quarter

Occupation	Less than 12 months	Fixed term	Permanent	Total (%)	Total (N)
Armed forces	0.0	0.0	100.0	100.0	141
Managers	0.0	15.0	85.0	100.0	6,124
Professionals	3.4	1.8	94.9	100.0	20,029
Technicians and associate professionals	5.3	18.2	76.5	100.0	4,577
Clerical support workers	0.0	14.0	86.0	100.0	7,978
Service and sales workers	12.6	11.2	76.2	100.0	29,412
Skilled agricultural forestry and fishery workers	31.2	40.3	28.6	100.0	19,433
Craft and related trades workers	29.3	12.6	58.1	100.0	50,193
Plant and machine operators and assemblers	7.1	10.7	82.2	100.0	25,822
Elementary occupation	25.1	15.0	59.9	100.0	99,996
Average	19.8	14.6	65.6	100.0	263,705

Table 2.8 shows the percentage distribution of employed population by age group and districts. The table shows that in Leribe, the highest percentage of 15.8 was in age group 25-29 while the lowest percentage of 0.1 was in the age group 85+. In Maseru, the highest percentage of 18.9 was observed in age group 30-34 followed by 20-29 with 16.6 percent and 14.9 percent in age group 35-39. In Quthing, the highest percentage of employed people was 22.2 percent in age group 25-29 followed by 16.2 and 13.5 percent in age groups 30-34 and 20-24 respectively. In Mokhotlong, the highest percentage of employed population was 19.2 percent in age group 30-34 followed by 14.6 and 13.2 percent in age groups 25-29 and 35-39 respectively.

Table 2.8: Percentage distribution of Employed Population by Age group and District, CMS 2013/2014- 3rd Quarter

Age groups	Botha-Bothe	Leribe	Berea	Maseru	Mafeteng	Mohales Hoek	Quthing	Qacha's Nek	Mokhotlong	Thaba-Tseka	Average
15-19	2.6	4.1	3.5	3.6	8.6	6.0	7.4	6.9	7.6	13.8	5.3

Table 2.9 shows the percentage distribution of employed population by type of contract and industry. It shows that for ‘service and sales workers’, the highest percentage of 65.9 was that of people with ‘written contract’ followed by 25.5 percent of people with ‘oral agreement’ and the lowest percentage of 3.7 percent of people with ‘no contracts’. For ‘elementary occupation’, the high percentage of 45.9 was that of people with ‘oral agreement’ followed by 41.4 and 10.4 percent of people with ‘written contracts’ and ‘no contract’ respectively. ‘Professionals’ had a high percentage (93.0) of the population employed with ‘written contracts’.

Table 2.9: Percentage Distribution of Employed Population by Type of Contract and Industry, CMS 2013/14- 3rd Quarter

Industry	Yes, written contract	Yes, oral agreement	No contract	Do not know	Total (%)	Total (N)

Elementary occupation	41.4	45.9	10.4	2.3	100.0	114,551
Average	54.1	33.9	8.9	3.2	100.0	299,676

Table 2.10 presents the percentage distribution of employed population by industry and district. 'Real estate, renting and business' industry had a high proportion of 77.2 percent in Maseru followed by 11.2 percent in Berea and 8.1 percent in Quthing. The highest percentage of 47.9 in 'manufacturing' industry was in Leribe followed by 32.2 percent in Maseru while a lowest percentage of 0.1 was in Mokhotlong. The table further shows that high percentage (56.4) of the population engaged in 'Financial intermediation' industry was in Maseru followed by 18.8 percent in Berea. Under 'construction' industry the highest percentage was in Leribe with 21.6 percent followed by Maseru 20.9 percent and lowest being 1.5 percent in Mokhotlong.

Table 2.10: Percentage Distribution of Employed population by Industry and Districts, CMS 2013/2014- 3rd quarter

Industry	Botha- Bothe	Leribe	Berea	Maseru	Mafeteng	Mohales Hoek	Quthing	Qachas Nek	Mokhotlong	Thaba- Tseka	Total(%)	Total(N)

Table 2.11 is the presentation of percentage distribution of employed population by hours worked and employment sector. The table shows that ‘government’ sector has the highest percentage (42.6) of people who worked 40 hours followed by 35.4 percent of people who worked 40 hours in ‘private business or farm’ while the lowest percentage of people who worked 40 hours was 1.7 percent of people who work in ‘embassy, foreign’ organization. For people who worked greater than 40 hours, the highest percentage (51.0) was for people who worked in ‘private business or farm’ and the lowest percentage (1.6) is for people who work in ‘Non-Governmental Organisation’. For those who worked less than 40 hours, the highest percentage was 40 for those who worked in ‘private household’ followed by 37.3 percent for those who worked in ‘private business or farm’ while the lowest percentage of 2.2 was for those who worked in ‘state owned enterprise’ and ‘embassy, foreign organization’.

Table 2.11: Percentage Distribution of Employed Population by Hours Worked and Employment Sector, CMS 2013/2014 - 3rd Quarter

Employment Sector	Less than 40 hours	40 hours	Greater than 40 hours	Average
Government	14.5	42.6	10.1	13.4
State-owned enterprise	2.2	6.1	5.2	5.0
NGO	3.8	3.2	1.6	2.0
Private business or farm	37.3	35.4	51.0	48.
Private household	40.0	11.0	27.4	27.2

Total (N)	41,986	37,552	342,969	422,507

Table 2.12 presents the percent distribution of employed population by district and sex. Botha-Bothe had more males employed (72.9 percent) than females (27.1 percent). In Thaba-Tseka, there are more males employed than females with males constituting 67.1 percent while females constituted 32.9 percent. On average there was high percentage of 58.2 of employed males in all districts in comparison to their female counter parts with a lower percentage of 41.8.

Table 2.12: Percentage Distribution of Employed Population by District and Sex, CMS 2013/2014-3rd Quarter

District	Male	Female	Total (%)	Total(N)
Botha-Bothe	72.9	27.1	100.0	24,212
Leribe	55.5	44.5	100.0	93,844
Berea	58.7	41.3	100.0	43,328
Maseru	55.5	44.5	100.0	106,798
Mafeteng	60.5	39.5	100.0	23,993
Mohale's Hoek	57.8	42.2	100.0	28,915
Quthing	61.1	38.9	100.0	38,390
Qacha's Nek	54.2	45.8	100.0	28,399
Mokhotlong	53.7	46.3	100.0	13,743
Thaba-Tseka	67.1	32.9	100.0	20,886
Average	58.2	41.8	100.0%	422,507

Table 2.13 illustrates the percentage distribution of underemployed population by sex and age groups. In age-group 60-64 years, there were more underemployed females (70.2 percent) than males with 29.8 percent and in age group 50-54 underemployed females (67.4 percent) exceeded the males with 34.8 percent. The table further shows that age groups 40-44, 35-39 and 25-29, males constituted higher percentages 67.1, 52.7 and 52.0 respectively while females constituted lower underemployment percentages of 32.9, 47.3 and 48.0 in the same age groups respectively.

Table 2.13: Percentage Distribution of Underemployed Population by Age-group and Sex, CMS 2013/2014-3rd Quarter

Age-Groups	Male	Female	Total (%)	Total (N)
15-19	39.3	60.7	100.0	366
20-24	33.4	66.6	100.0	1,337
25-29	52.0	48.0	100.0	1,059
30-34	35.1	64.9	100.0	1,743

80-84	0.0	0.0	0.0	0
85+	0.0	0.0	0.0	0
Average	41.1	58.9	100.0	12,051

Table 2.14 shows the percentage distribution of underemployed population by sex and employment sector. Government sector had more females (88.3 percent) than males constituting 11.7 percent and this was followed by private households with 64.4 percent of female population while males had 35.6 percent. NGOs had the percentage difference of 12.6 between males and females with 56.3 and 43.7 percent respectively. Males also dominated females in private business or firm with 0.4 percent.

Table 2.14: Percentage Distribution of Underemployed Population by Employment Sector and Sex, CMS, 2013/2014- 3rd quarter

Employment sector	Male	Female	Total (%)	Total (N)
Government	11.7	88.3	100.0	970
State-owned enterprise	50.0	50.0	100.0	355
NGO	56.3	43.7	100.0	915

Embassy, foreign organization	0.0	0.0	0.0	0 -
Average	41.1	58.9	100.0	12,051

Table 2.15 presents the percentage distribution of underemployed population by district, zone, settlement and sex.). It shows that Thaba-Tseka, Maseru and Leribe had the highest percentage of underemployed females with (78.4, 72.1 and 60.6) respectively in comparison with their male counterparts which had 21.6, 27.9 and 39.4 percent respectively. There was high percentage difference of 42.2 in rural area where females constituted a high percentage of 71.1 as compared to that of males (28.9 percent). On average, there were more females underemployed than males with 58.9 and 41.1 percent.

Table 2.15: Percentage Distribution of Time-related Underemployed Population by District, Zone, Settlement and Sex, CMS 2013/2014- 3rd quarter

		Male	Female	Total(%)	Total(N)
District	Botha-Bothe	87.1	12.9	100.0	419

Table 2.16 presents percentage distribution of unemployed population by district, zone, region and sex. It shows that across districts, Quthing, Botha-Bothe and Qacha's Nek had the highest percentage of unemployed female population with 68.9, 67.5 and 67.1 percent respectively in comparison to their male population. Another observation is that there was high percentage difference of 23.2 in Senqu River valley where females constituted a high percentage of 61.6 as compared to that of males (38.4 percent). On average, there were more unemployed females than males with 59.0 and 41.0 percent.

Table 2.16: Percentage distribution of unemployed population by District, Zone, Region and Sex, CMS 2013/2014- 3rd quarter

Table 2.17 presents percentage distribution of job seekers by sex and age groups. Age group 15-19 had higher percentage (74.8) of male job seekers in comparison to female population with 25.2 percent at that age group. This was followed by 66.5 percent of male population dominating their female counterparts (33.5percent) at age group 55-59. The table shows that at age group 65-69 there were more female job seekers with 85.1 percent than male population with 14.9 percent. Again at age group 50-54 there were more female job seekers (61.9 percent) compared to male job seekers with 38.1 percent.

Table 2.17: Percentage Distribution of Job Seekers by Age-groups and Sex, CMS 2013/2014-3rd Quarter

CHAPTER THREE

Water and Sanitation

3.0 Introduction

Clean water is an indispensable resource both for household and economy as a whole. Water is needed for drinking, cooking, washing, bathing and cleaning. Water plays a pivotal role for personal hygiene and public sanitation. Improvement in water supply and sanitation are vital to prevent death water-borne diseases which contribute 2000 deaths per day for under-five children (UNICEF 2013). This chapter is to focus on the main source of water available to households, agency used for water connection etc.

3.1 Main Source of Water

Table 3.1 shows the percentage distribution of households by main source of water available and residence. In urban areas 57.7 percent of household used piped water in their yard followed 11.6 percent which used piped water in someone else plot. It is also observed that 7.8 percent used Unprotected spring compared to 16.7 in rural areas. In rural areas 47.7 percent and 12.3 percent use water from Public tap/standpipe and Surface water respectively.

Table 3.1: Percentage Distribution of Households by main Source of Water Available and Residence, CMS 2013/2014-3rd Quarter

Sources of drinking Water	Residence		Total
	Urban	Rural	
Piped water into dwelling	4.8	0.6	1.9
Piped water to yard/plot	57.7	4.5	20.4
Piped into someone elses yard/plot	11.6	1.1	4.3
Borehole at home	0.2	0.8	0.6
Rainwater harvesting at home	0.2	3.7	2.7
Rainwater harvesting, neighbour	0.1	0.2	0.2
Public tap/standpipe	9.1	47.7	36.1
Public borehole	0.2	4.7	3.3
Protected spring	2.7	6.2	5.2
Unprotected spring	7.8	16.7	14.0
Surface water (river, dam, lake, pond, stream, canal, irrigation channels)	1.8	12.3	9.1
Bottled water	0.1	0.0	0.0
Cart with small tank/drum	0.2	0.1	0.1
Tanker-truck	0.1	0.1	0.1
Other	3.4	1.2	1.9
Total	155,465	364,317	519,781

3.2 Water connection

Table 3.2 shows the percentage distribution of households by agency used for water connection and Urban-Rural Residence. The table shows that 82.3 percent of water connection was constructed by Water and Sewage Company (WASCO) while 5.3 percent is constructed by Department of Rural Water (DRWS). In urban areas 88 percent connection was constructed by WASCO and 1.9 percent was constructed by DRWS compared to 49.6 percent constructed by WASCO and 24.6 percent which was constructed by DRWS.

Table 3.2: Percentage Distribution of Households by Agency used for Water Connection and Residence, CMS 2013/2014-3rd Quarter

Agency Used to connect Water	Residence		
	Urban	Rural	Total
Water and Sewerage Company (WASCO)	88.0	49.6	82.3
Department of Rural Water Supply (DRWS)	1.9	24.6	5.3
Other	3.4	8.5	4.1
Don't Know (DK)	6.7	17.3	8.2
Total	91143	15780	106923

3.3 Sanitation

This section focuses on sanitation and household hygiene habits. It includes Type of toilet, who paid for building, cleaning habits.

Table 3.3 shows percentage distribution of type of toilet used by residence. In urban areas 50.9 household reported to use Ventilated improved pit latrine followed by 21.8 percent using Pit latrine with slab. Rural areas 38.4 percent reported that they had no toilet facilities and only 23.4 percent used VIP toilets.

Table 3.3: Percentage Distribution of Households by Type of Toilet used and Residence, CMS 2013/2014-3rd Quarter

Type of toilet	Residence		Total
	Urban	Rural	
Flush/pour flush to piped sewer system	2.6	0.3	1.0
Flush/pour flush to septic tank	3.5	0.4	1.4
Flush/pour flush to pit latrine	1.2	1.3	1.3
Flush/pour flush to elsewhere	0.0	0.0	0.0
Flush/pour flush to unknown place/don't know where	0.0	0.0	0.0
Ventilated improved pit latrine	50.9	23.4	31.9
Pit latrine with slab	21.8	16.7	18.3
Pit latrine without slab/open pit	11.3	19.3	16.8
No facilities	8.7	38.4	29.2
Other	0.1	0.0	0.0
Total	132773	295903	428676

Table 3.4 shows percentage distribution of household and who paid for construction of toilets used by residence. In urban areas 78 percent of toilets were owner built while 1.8 percent were Government / NGO responsible for building. In rural areas 63.5 percent were owner built while 20.5 percent Government / NGO responsible for building.

Table 3.4: Percentage Distribution of Households by Urban-Rural Residence and How the Toilet was Built and who Paid for Construction, CMS 2013/2014-3rd Quarter

How was the toilet built and paid for	Residence		Total
	Urban	Rural	
Owner built, family savings and support	78.0	63.5	69.3
Owner built, subsidy from government. or NGO	1.7	11.7	7.7
Government / NGO responsible for building	1.8	20.5	13.0
Other	0.4	2.1	1.4
Do not know	18.1	2.2	8.6
Total	121279	182132	303411

Table 3.5 shows percentage distribution of toilet cleaning habits by place of residence. The table shows that majority (53.1% urban and 47.3% rural) of households in respect of residence clean toilets weekly. Less than 5.4 percent report to have never cleaned the toilet. 20.5 and 19.5 percent of urban and rural respectively to clean toilets daily.

Table 3.5: Percentage Distribution of the Households by Toilet Cleaning Habits and Place of Residence, CMS 2013/2014-3rd Quarter

Toilet Cleaning habits	Residence		
	Urban	Rural	Total
Daily	20.5	19.5	19.9
Weekly	53.1	47.3	49.6
Twice a month	3.7	7.9	6.3
Once a month	2.6	5.6	4.4
Less frequently	13.2	15.4	14.5
Never	6.9	4.3	5.4
Total	120080	180934	301014

CHAPTER FOUR

Household Economy

4.0 Introduction

The household economy describes the collective economic activities of households. The household economy is often called the household sector to differentiate it from other sectors like business, government and foreign sectors. This chapter examines household expenditure, food consumption, remittances and whether the households had the ability to buy or pay for utilities, and settle debts.

4.1 Ability to Pay for Utility

Individual households were asked whether they were in arrears or unable to pay for utilities that is electricity, water, gas, paraffin and hire purchase installment or other loan payments in the three months preceding the survey. Table 4.1 shows ability to pay or buy utility by residence. The table shows that except for paraffin other utilities were not applicable for most families. Thus, showing that most of the households were not connected to electricity (71.0 percent) and water supply (59.4 percent). Also a large proportion of households did not buy goods on hire purchase agreement and did not have loans to pay (73.7 percent). The table further shows that over sixty percent of households were able to pay or buy paraffin and I can be realized that less than 5 percent were unable to buy or pay for water and electricity.

When further looking into ability to pay for utilities within residence. Table 4.1 shows that approximately 50 percent of the population in urban areas were able to pay or buy electricity compared to about 15 percent in rural areas this shows that less than 20 percent of rural households are connected to electricity compared to just less than 60 percent in urban areas. Majority of rural households (75.7 percent) do not pay for water utilities compared to 23 percent in rural areas. When looking at paraffin which is most widely used 29.9 percent were unable to buy or pay for paraffin compared to 12.2 percent

Table 4.1: Percentage Distribution of Household Ability to Buy or Pay for Utility by Urban/Rural Residence, CMS 2013/2014-3rd Quarter

Utility	Response	Residence		Total
		Urban	Rural	
Electricity	Yes	9.3	2.1	4.3
	No	49.2	14.5	25.3
	N/A	41.5	83.4	70.4
Water	Yes	9.3	0.9	3.5
	No	67.6	23.4	37.1
	N/A	23.0	75.7	59.4
Gas	Yes	19.6	14.6	16.2
	No	55.7	31.2	38.8
	N/A	24.7	54.2	45.1
Paraffin	Yes	12.2	29.9	24.4
	No	72.1	58.2	62.5
	N/A	15.8	11.9	13.1
Hire purchase instalments or other loan payments	Yes	5.3	6.9	6.4
	No	33.8	17.5	22.6
	N/A	60.9	75.6	71.0
Total		132921	296107	429028

4.2 Remittance and Transfers

Remittances and/or transfers are personal cash or in kind transfers by household members or non-household members who work in the country and/or other countries. Figure 4.1 show mean remittance transfers for household a month preceding the survey. From the figure we can see that an average remittance in cash from abroad in M1,234. 00 compared to M891.00 from within a country. From the figure we can also realize that most transfers within household are from abroad.

Figure 4.1: Remittances and Transfers Received in a month prior to the survey, CMS 2013/2014-3rdQuarter

4.3 Household Consumption and Expenditure

Household consumption and expenditure is defined as all monetary expenditure by households on goods and services for consumption. The value of education, health and other services received free from government; own produced foods as well as the rental value of owner-occupied and free housing were not included.

Table 4.2 shows the mean percentage household expenditure by residence and consumption commodity. Urban areas spend on average highly on Food and clothing (50.16%) while in rural area only 33.9 percent. From the table we can also see that over 60 percent irrespective of location household consumption expenditure is on food and non-alcoholic beverages and Clothing and footwear.

Table 4.2: Mean Percentage Household Consumption Expenditure by Residence and Consumption Commodity, CMS 2013/2014-3rd Quarter

ANNEX 1: Survey Design

Sample design

The sample design is a two-stage stratified cluster sample design, where primary sampling units are the census enumeration areas and the second stage sampling units are the households. A primary sampling unit is a cluster of households. Within each stratum, primary sampling units are selected with Probability Proportional to Size (PPS). The number of households within each primary sampling unit serves as a Measure of Size (MOS).

Let $F1$ = First stage sampling fraction

$F1 = (nh/Mh)$ Where nh = sample size = number of selected primary sampling units in stratum h .

Mhi = Number of households in i th selected psu of stratum h as of 2006 Population Census

Mh = Number of households in stratum h as of 2006 Population Census

Let $F2$ = Second stage sampling fraction

$F2 = (m'hi/M'hi)$ Where $m'hi$ = Number of selected households in i th psu of stratum h .

$M'hi$ = Number of listed households in the i th psu of stratum h (during the Listing time)

Overall sampling fraction = $F1 * F2$

Sampling Interval

Sampling interval within the cluster: $M'hi$ = Households in stratum h of i th psu from the listing.

$M'hi$ = Sample size in the selected primary sampling units

Sampling Interval = $(M'h/m'hi)$.

(a) Select a random number between 1 and interval that random number is the 1st selected household in the selected primary sampling unit.

(b) Add the interval to the random number to get the second selected household.

Continue the process until the desired sample size is achieved.

Sample size

The sample size was 4,250 households for the second year of CMS (2013/2014). To ensure quality, interviewer performance was monitored by spot checking, observing interviews throughout the field work.

Editing

Editing was continuously done by interviewers/data collectors, field supervisors and office staff to check for inconsistencies.

Response details

The response rate for the 1st quarter was 58.5 percent. This implies that it was not possible to complete interviews in 41.5 percent of the sampled households mainly due to absenteeism.

ANNEX 2: Definition of Terms

Household Head: A household head is a person who is regarded by members of the household as the main decision maker and takes care of the household.

Subsistence farmer: This refers to a farmer who grows crops or rears poultry or livestock mainly for own consumption.

Unpaid family worker (s): These are persons who normally assist in the *family business* but *do not* receive any pay or profit for the work done.

Self-employed: These are persons who are *not working for others for wage or salary* but run their own business, workshops, farms, etc. Ordinarily, such persons will have their own place on business and determine their own hours of work programme.

Paid employees: These are persons who work for others for *wage or salary*, which may be paid to them in *cash or kind or partly in cash and partly in kind*

Employers: These are people who are working in their *own business or farm and also employ 5 or more people* to assist them and pay them wages or salaries in cash or in kind.

Currently active population: The '**currently active population**' comprises of all persons aged 6 years and above who are '**employed**' or '**unemployed**' during the **last week** i.e. a week preceding the interview.

ANNEX 3: TABLES
