/ Figures below 5.000 (this corresponds to less than 50 cases in the sample), included in the total sums only

In the tables 4 to 12, the last category of the age variable differs from the recommended age categories.

The costs for this further differentiation could not be covered by the German ESS budget.

5) DEGREE OF URBANISATION, FOR THE WHOLE COUNTRY

Distributions (in absolute figures) of the total Dutch population by Degree of Urbanisation on Jan 1st 2004

	Total
1 Very high urbanisation (> 2500 addresses/km ²)	3104110
2 High urbanisation (1500-2500 addresses/km ²)	3658490
3 Moderately high urbanisation (1000-500 addresses/km ²)	2898190
4 Low urbanisation (500-1000 addresses/km ²)	3203130
5 Very low urbanisation (< 500 addresses/km ²)	3394110
Total	16258030

51 Population statistics, United Kingdom

ESTIMATED RESIDENT POPULATION MID-2001 BASED ON THE 2001 CENSUS BY QUINARY YEAR OF AGE AND SEX

HEALTH WARNINGS

FIGURES IN UNITS

It is ONS policy to publish population estimates rounded to at least the nearest hundred persons. Estimates are sometimes provided in units to facilitate further calculations. They cannot be guaranteed to be as exact as the level of detail implied by unit figures.

ONS publishes national population estimates by sex and single year of age detail, and local estimates by sex and quinary age group. Local estimates are also now calculated by single year of age; but those figures are less reliable and single year of age data for local areas should be aggregated to at least five-year groupings for use in further calculations or for presentation purposes.

The data are Crown copyright. They may be reproduced freely within your organisation. They must not be used for sale or advertising purposes.
