Sample size:

Questionnaire:

The WVS questionnaire was translated from the English questionnaire by a member of the research team. The translated questionnaire was not back-translated into English; however the translated questionnaire was pre-tested: one of surveyors interviewed 10 students, one of surveyors interview 10 ordinary people by random, and one of surveyors interviewed 10 old people randomly. This means 30 people were tested. There have not been any optional WVS questions included, and also country-specific questions were not included. The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

There were some quota controls on the type of individual selected to take part in the survey. The quota controls were in one province, 100 respondents were in cities, and 100 respondents were in rural areas. In the final clusters, we got 32 respondents (16 males and 16 females) for cluster A, 36 respondents (18 males and 18 females) for cluster B, and 32 respondents (16 males and 16 females) for cluster C. Clusters are divided into 3 different levels of ages. There were some limitations in the sample. To some extent, people think the questions are too much.

Remarks about sampling:

-Sample unit from office sampling: Named individual

Survey procedure:

Personal Face to Face Interview

Fieldwork:

Interviews were done face to face. Interviewers were paid according to performance. Approximately 75% of the interviews were supervised. Approximately 90% of the interviews were back-checked.

Remarks about non-response:

There were no selected respondent too sick/incapacitated to participate. Also there were no selected respondent away during the survey period and there were no language problem.

Weighting:

No weighting variable was added.
