Questionnaire:

The WVS questionnaire was translated from the English questionnaire by a member of the research team. The questionnaire was translated to Hebrew and Arabic. The translated questionnaire was back-translated into English and the translated questionnaire was also pre-tested with 10 face to face interviews. We used the ISSP questionnaire for the demographic questions. There have been some optional questions included: V120-121, V124-125, V36, V133, V139, V217, V83-85, V97-102. There have been some country-specific questions included in the questionnaire but there have not been included before the demographic questions. The questions included were: b38-b42b45b46, b48-b61,b63-b80 were country-specific. Also, it is important to mention that not all the questions were in the prescribed order. The sample was not designed to be representative of the entire adult population. We excluded the non-urban population (communities that include less than 2000 people) which constitutes 9% of the Israeli population. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

The sample was not designed to be representative of the entire adult population. We excluded the non-urban population (communities that include less than 2000 people) which constitutes 9% of the

Israeli population. There were different stages in the sampling procedure: - Division into strata (based on geographic location, community size and socio-economic characteristics). -With strata sampling of statistical areas (the smallest ecological unit). -Interviewing of specified number of persons within statistical units based on Kish-grid. Stratification factors were used such as: -Socio-economic characteristics of statistical area -Geographical region of statistical area

Remarks about sampling:
-Final numbers of clusters or sapling points: 47 -Sample unit from office sampling: Address point in the selection area, and the procedures for continued movement

Survey procedure:
Personal Face to Face Interview

Fieldwork:
Interviewers were paid according to performance. The interviewer approach was through calls made at different times of day and calls made on different days of week. The minimum number of re-calls required were 3 and 33% of the interviews were back-checked.

Response rate:
The following table presents completion rate results: -Total number of starting names/addresses 3617 -Addresses established as empty, demolished or containing no private dwellings 241 -Selected Respondent had inadequate understanding of language of survey 278 -No contact at selected address 296 -No refusal at selected address 1367 -Other type of unproductive (please write in full details in the box below) 236 -Full productive interview 1199

Remarks about non-response:
-Cases were coded other when we could not determine whether the non-response was because of inappropriate address, no contact after 3 approaches or inappropriate respondent (mostly illegal workers).

Weighting:
No weighting variable was added.
