RUSSIAN FEDERATION 2006

Geographical scope:

Russian Federation

Principal investigator(s):

Christian Welzel School of Humanities and Social Sciences International University of Bremen

P.O.Box 750 561 D-28725 Bremen Germany E-mail: c.welzel@iu-bremen.de

Data Collection Organization:

GfK RUS, Moscow

Fieldwork Period:

13-02-2006 - 10-03-2006.

Universe:

National Population, Both sexes, 16 and more years

Sample size:

2033

Estimated Error:

2,2

Questionnaire:

- Sampling (v255, v257) and quota (v235, v236, v237) relevant questions had been asked at the beginning of the interview. - Then the order of the WVS questions strictly followed the master questionnaire. - The following questions had been amended, agreed by WVS: v114: Had been split off into three questions v114_1: State social support for citizens v114_2: State control vs. market principles v114_3: (In)Tolerance to people of other nation, race, religion v256: Instead of ethnic group, different nationalities relevant for Russia had been asked. Two additional questions had been asked in Russia: - F3: Evaluation of the income of the household (asked after v253) Please, evaluate the income rate of your household. 1 We do not always have enough money for food 2 We have enough money for food but buying clothing is a problem 3 We have enough money for food, clothing and small household appliances. However, buying a TV-set, a refrigerator or washing machine would be a problem for us 4 We can afford main household appliances. However, buying a car would be a problem 5 We have enough savings almost for everything except for such expensive things as an apartment or a country house 6 We dont have any financial difficulties. We can afford buying an apartment or a country house - v260: Size of household (asked at the end of the interview) WVS question number or description of question: V50 to V54 V57 to V58 V91 to V94 V105 to V113 V115 V117 V122 to V124 V164 to V176 V178 to V183 V188 to V191 V193 to V197 V210 to V221 V231 to V233 V240 V248 to V252 Reason(s) not included: Short questionnaire, GfK survey

Sample:

Multi-stage stratified cluster random route sample (The households are selected based on random route sample. Selection of the respondent in household is made according to quota on age and gender). This methodology does not imply repeated visits of the households, e.g. if nobody opens the door. In order to build a national representative sample the universe was stratified into 8 macro regions (Moscow is allotted into a separate macro region) and into 8 types of settlements in every macro region. Sample points (approximately 125) are distributed among cells in compliance with national statistics. At each sample point approximately 15 interviews had been conducted. 1. Settlements are chosen for every strata. This is done by random selection from the full list of settlements that are allocated to the strata (the whole territory of the Russian Federation excluding some territories of the North Caucasus and sparsely populated areas in the North of Russia). 2. Selection of sampling points: Election sites are considered as sampling points. They are selected randomly from the full list of election sites in the city (town). In rural settlements (with usually 1 election site) selection of sampling points is not needed. 3. Selection of the definite residential as starting point within each election site. Interviewer begins with the first entrance of selected building. Step equals to 7 apartments from interview conducted. If there is not enough respondents to complete the task, interviewer passes to another building which is the next in the election site list. 4. Respondents are selected in a household among household members aged 16 years and older according to quotas representing the sample universe. Quota according to the following criteria: - gender - age Additional criteria used for weighting of the data: - size of household - region - size of town (Source: Federal State Statistics Service (Rosstat), December 2004)

Remarks about sampling:

As in most of the countries involved, quota sampling had been used to select the respondents, a brief description of the methodology at the beginning of the methodological report seems to be useful. The respondent was selected using quota selection. Respondents were only selected if they matched the quotas given to the interviewers. Concerning substitution, any respondent fitting an appropriate quota profile could be interviewed instead of somebody with the same quotas, but who did not want to participate in the survey. Concerning stratification factors, region and size of town were used to design the sample and select appropriate sampling points.

Survey procedure:

Personal Face to Face Interview

Fieldwork:

Face-to-face in-home interviews via PAPI (paper and pencil interviews)

Weighting:

During and after data collection, representativeness of the sample with respect to nationally based criteria has been checked. Deviations from the populations distribution on these criteria were observed. Deviations from the populations distribution (criteria: gender, age, size of household,

region, size of town) were corrected by a weighting variable built with the RIM weighting procedure. The population characteristics were obtained from Federal State Statistics Service (Rosstat), December 2004. These deviations have been corrected by a weighting variable built with the RIM weighting procedure see the RIM weighting theoretical basis paper entitled ON A LEAST SQUARES ADJUSTMENT OF A SAMPLED FREQUENCY TABLE WHEN THE EXPECTED MARGINAL TOTALS ARE KNOWN, by W. Edwards Deming and Frederick F. Stephan, in volume 11, 1940 of the Annals of Mathematical Statistics. It was realised with Quantum software of SPSS MR company. Additional criteria used for weighting of the data: size of town
