(2) Selection of sampling points: Election sites are considered as sampling points. They are selected randomly from the full list of election sites in the city (town). In rural settlements (with usually 1 election site) selection of sampling points is not needed.
(3) Selection of the definite residential as starting point within each election site: Interviewers begins with the first entrance of selected building. Step equals to 7 apartments from interview conducted. If there is not enough respondents to complete the task, interviewer passes to another building which is the next in the election site list.
