Fieldwork Period:

15-09-2001 - 21-09-2001.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

1223

Estimated Error:

2,9

Questionnaire:

We used the questionnaire that was designed for the Islamic countries. The questionnaire was translated by a specialist translator. The translated questionnaire was back-translated into English and the translated questionnaire was also pre-tested: 133 questionnaires. There were some questions or concepts that caused particular problems when the questionnaire was translated in English. Especially the difficulties were in political matters. The question left-right scale was difficult for the respondent to understand. In fact the team decided to omit 26 questions from the original questionnaire, which were 237 questions. Thus we ended up using 211 questions. There were not included: Q73, Q83, Q90, Q94, Q168-174, Q183-186, Q187-190, Q202-203, Q206-209. The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

There were different stages in the sampling procedure: 1- First stage is to draw primary sampling

units (clusters) by pps method. 2- Second stage to draw households from each psu by systematic method. 3- Third stage to draw the eligible person from each household by simple random sample. The quota sample is biased sample we don't use this type of samples in general. But we use stratified sample instead with implicit stratification if it is required, so for male and female from each cluster by drew 50% hh from each ssu for male and 50% for female. Substitution was permitted if the house become unoccupied or the nationality of the household is non-Jordanian. In the first stage stratification were applied for urban rural socio economic characters and administrative distribution.

#### Remarks about sampling:

-Final numbers of clusters or sampling points: 130 -Sample unit from office sampling: Household In each selected household the interviewers lists all male or female individuals above 18 and randomly according to a given table I which there is a family serial number one person is identified as a respondent. The extra samples of households were selected in advance before the field work start 3 independent households were selected from each cluster to subsidize non response.

#### Survey procedure:

Personal Face to Face Interview

#### Fieldwork:

The fieldwork was done by the Centre for Strategic Studies at the University of Amman-Jordan. Interviewers were not paid according to performance. The interviewer approached was through calls made at different times of day. The minimum number of re-calls required were 2 and 1% of the interviews were back-checked.

#### Response rate:

The non response should be less than 5%

#### Weighting:

Yes The weighting is very important because the sample is not self-weighting design the weight equal the reverse of probability of drawing the sampling unit.
