## UGANDA 2001

Geographical scope:

Uganda

Principal investigator(s):

Mari Harris Markinor, POB 213 Pinegowrie 2123 Johannesburg South Africa T+ 27 11 462 3757 F+ 27 11 789 3764 E-mail: MariH@markinor.co.za

Data Collection Organization:

Markinor (Stellenbosch, South Africa)

Fieldwork Period:

03-03-2001 - 18-03-2001.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

1002

Estimated Error:

3,2

Questionnaire:

The WVS questionnaire was translated from the English questionnaire by a specialist translator. The translated questionnaire was pre-tested. The pre-tests were part of the general pilots. In total 20 pilots were conducted. The English questionnaire from the University of Michigan was used to make the WVS. Extra questions were added at the end of the questionnaire. Also, country specific questions were included at the end of the questionnaire, just before the demographics. The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of the country. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

The interviews were allocated to both the rural and urban sample. For each of these there is a male and female split and a total sample. The total sample is split up between actual amount of interviews and the number of sampling points per province. For the Lira province, 36 interviews must be conducted in rural areas in total, which means that 6 sample points need to be drawn for rural Lira. The sample had to be representative of urban as well as rural populations. Roughly the distribution was as follows: Uganda: 30% urban; 70% rural. A standard form of sampling instructions was sent to each agency to ensure uniformity in the sampling procedure. Markinor stratified the samples for each

country by region, sex and community size. To this end, statistics and figures that were supplied to us by the agencies were used. However, we requested the agencies to revise these where necessary or where alternatives would be more effective. The agencies then supplied the street names for the urban starting points, and made suggestions for sampling procedures in rural areas where neither maps nor street names were available. From sample-point level, the respondent selection was done randomly according to a selection grid used by Markinor (the first two pages of the master questionnaire). Substitution was permitted after three unsuccessful calls. Six interviews were conducted at each sample point. The male/female split was 50/50.

#### Remarks about sampling:

Selecting de rural points: Due to the fact that there is so many rural points, we use the method of selecting smalls towns and then conducting the interviews within a 20km radius of the boundaries of the selected town.

#### Survey procedure:

Personal Face to Face Interview

#### Fieldwork:

The agency contracted to do the fieldwork in Uganda went to considerable ends to fulfil the stringent sampling requirements. Fieldwork took place before and after the much-published Uganda presidential election. The election was held on 12 March 2001. On Wednesday 4 March the research team narrowly escaped a rebel attack at Kasese (Western Uganda). In the northern district of Lira and Apac, where rebel activities are prevalent, the team had to seek for the necessary security cover from the military personnel to enable them to conduct the survey at the selected points. The poor road network in the north and north-western districts and Masindi slowed down the fieldwork.

#### Weighting:

Yes Columns 849-854. The statistics for Uganda were supplied by the Uganda National Council for Science and Technology.
