PHILIPPINES 2001

Geographical scope:

Philippines

Principal investigator(s):

Linda Luz Guerrero Social Weather Stations 52 Malingap Street, Sikatuna Village, Quezon City 1101. guerrero@sws.org.ph

Data Collection Organization:

Social Weather Stations

Fieldwork Period:

09-07-2001 - 27-09-2001.

Universe:

National Population, Both sexes,18 and more years

Sample size:

1200

Estimated Error:

2,9

Questionnaire:

The WVS questionnaire was translated from the English questionnaire. The translated questionnaire was back-translated into English and the translated questionnaire was also pre-tested. The 2001 WVS questionnaire was translated into 5 major Philippine languages. The Filipino version, which became the definitive version was first translated (from English) by a senior staff member of SWS. The final version was decided on by SWS staff members after pre-testing on 12 adults. The 4 other translations which used Filipino as basis and sometimes the English version were made by other non-SWS senior field staff members and were no longer reviewed by SWS. There have been some optional questions to the WVS: V181a-c. There have been some country-specific questions included asked at the end of the WVS demographics. The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

The sampling methodology is dwelling-based. Thus, the homeless, the institutional residents - those residing in military barracks, convents, prisons, dormitories, evacuation/refugee centers or any other temporary dwellings such as those built inside school campuses, church compounds during disasters and those residing atop commercial buildings, are excluded from the frame. The selection method

that was used to identify a respondent was random walk procedure. 50% males and 50% females were used as quota controls by alternating between male and female respondents. Substitution was permitted if even after the required valid callbacks the respondent was not available; it was not giving accurate answers because bedridden; nobody was at home; a respondent outrightly refuses to be interviewed; respondent refuses to continue with the interview. Geographical stratification was: The WVS covered the entire Philippines and had four major study areas: National Capital Region (NCR), Balance Luzon (outside NCR), Visayas and Mindanao. There are usually limitations for the remote rural sample. The sample area was substituted if upon arrival in the sample spot the field interviewers realize that covering there were: - Not meeting the survey schedule because, for example, there were no means of transportation in locating the respondents with allotted schedule. -Security risks for field interviewers (presence of rebels, bandits, hostile ethnic minorities) -Spending too much for transportation (i.e unreasonably beyond the budgetted amount) Rural samples were generally within the center of the village as the starting points were situated near the center.

Remarks about sampling:
-Final numbers of clusters or sapling points: 240 -Sample unit from office sampling: Electoral precincts (for urban areas) and barangays or villages (for rural areas)

Survey procedure:
Personal Face to Face Interview

Fieldwork:
For the National Capital Region (NCR), the field interviewers were paid a fixed fee for each completed interview. For areas outside of NCR, the field interviewers were paid the minimum wage plus per diems, and actual transportation fees and were given a minimum quota of 5 interviews per day. Even if the quota was not fulfilled but for justified reasons, these non-NCR interviewers were still paid the minimum wage plus the per diem. The interviewer approached was through calls made at different times of day and calls made on different days of week. The minimum number of re-calls required were 2 and 10% of the interviews were supervised and 20 % were back-checked.

Response rate:
For the WVS, 37% are original respondents; the rest are substitutes.

Weighting:
Yes Census-based population weights were applied to the survey data. The weight projection was computed by dividing the projected population in the area by the sample size of the same area.
