Factors used were: Region (17) and Size of Municipality (7 categories). Proportional distribution of interviews to population 18 years and over in both cases was then used.

## EVERYONE PLEASE ANSWER

24. All in all, what are the known limitations of your realized sample?

For example: non-response rate; is there differential coverage of particular groups, either because of sample design or response differences?

% response or % non-response: PLEASE WRITE IN:

The substitution rate is high, a growing problem for every institute doing face-to-face interviewing at R's home. However, the demographic profile (even cross-tabs) of each sample is similar in all of our studies and similar to census data.

25. Please fill in the following details about your sample. If some categories do not apply, please complete to the highest level of detail possible and use the 'other' box to give more information.

### EVERYONE PLEASE ANSWER

40. Did you add a weight variable?

Yes ☒

→ **ANSWER Q.41**

No ☐

→ **SECTION 5**

### IF WEIGHT VARIABLE ADDED

41. Please describe the weighting or post-stratification strategy used.

The data file is provided unweighted, but a weight variable is included in case someone needs it. The weight variable is a 2 x 4 matrix (age and sex) and it may be used to make sure the sex-age distribution of the sample is exactly the same as that of the Spanish population 18 years and over. However, the differences between the weighted and the unweighted samples are very small, due to our sampling process.

## Section 5: Characteristics of National Population

45. Each WVS member is asked to provide information on known characteristics of its national population, from census or the best available estimates from government surveys or other high-quality data-sources:

- sex distribution of the population (For population 18 years old and over)
- age distribution of the population (For population 18 years old and over)
- education (years of schooling) of the population (Educational level for 20 years old and over population)
- other characteristics (PLEASE SPECIFY) (Employment rate for population 20 years old and over)

Please specify also the sources which have been used. Please note that the number of characteristics is what is minimal required. You can add as many characteristics as you like, but do not forget to specify them.

In the table below please present the information from census or from other government surveys or other high-quality data (column SOURCE 1) and the proportions obtained in your data, before and after weighting
