Technical record

Study #

Turkey 2001_v20180912

TURKEY 2001

Geographical scope:

Turkey

Principal investigator(s):

Prof.dr. Yilmaz Esmer Bogaziçi University Department of Political Science Bebek Istanbul 80815
Turkey P +90 (212) 263 15 40 F +90 (212) 287 24 55 E-mail: esmer@boun.edu.tr

Data Collection Organization:

Bogazici University (Istanbul) and Birim Arastirma

Fieldwork Period:

01-12-2001 - 01-01-2002.

Universe:

National Population, Both sexes, 18 and more years

Sample size:

3401

Estimated Error:

1,7

Questionnaire:

The WVS questionnaire was translated from the English questionnaire by a member of the research team. The translated questionnaire was not back-translated into English and also was pre-tested. There were some questions that caused problems when the questionnaire was translated especially questions assuming a church organisation were problematic. Also some of the irrelevant questions were omitted; some were asked nevertheless. There have not been any optional WVS questions and/or items been included, however country-specific questions were included. They were mostly included at the end of the questionnaire but some country specific additions were made to a confidence in institutions and b) neighbours questions. A number of questions were omitted because they sounded totally irrelevant for the local population or because previous surveys indicated that they did not work for this population. The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

The different stages in the sampling procedure were: -Self representative PSU's (provinces) - Selected provinces (PPS selection with implied stratification according to income) -Districts within provinces -Urban and rural locations within districts (villages selected PPS within rural areas;

neighbourhoods and streets selected within urban locations, households identified with systematic random selection, Age and gender quotas used in the final selection of individuals) The final numbers of clusters or sampling points were 22 PSU's. The sampled unit we got from the office sampling was the address and the selection method that was used to identify a respondent was move on the next address until quota is filled. The quota control was 3 age groups and 2 gender groups were used as quotas. The stratification factors that was used: Per capita gdp. There were some limitations in the sample. It was a quota sample in the last stage as explained above. Overall, the design yields very satisfactory results.

Remarks about sampling:

3 age groups (18-27; 28-40; 41+) and 2 gender groups were used as quota controls. There were stratification factors per capita gdp. A known limitation of the realized sample: this was a quota sample in the last stage as explained. Overall, the design yields very satisfactory results

Survey procedure:

Personal Face to Face Interview

Fieldwork:

The interviewers were paid according to their performance and 10% of them was supervised. There were no rules concerning the way how an interviewer approached an individual, address or household. 25% of all interviews eventually was back-checked.

V145F.- And now, could you please tell me which type of society this country you think this country SHOULD aim to be in the future. For each pair of statements, would you prefer being closer to the first or to the second alternative? First statement: A society that assures safety and stability through appropriate regulations; Second statement: A deregulated society where people are responsible for their own actions
