Questionnaire:

The WVS questionnaire was translated from the English questionnaire by a specialist translator. The translated questionnaire was not back-translated into English and the translated questionnaire was not pre-tested. It was used the French version based on the V216. There have been some country-specific questions included such as V77 Roma instead of Jews V218 (SEE Codebook) V226: 1=2; 2=3; 3=4; 4=5; 5&6=7; 7,8&9=8; 0.99=9 V243 (SEE Codebook) V245 (SEE Codebook). The sample was designed to be representative of the entire adult population, i.e. 18 years and older, of your country. The lower age cut-off for the sample was 18 and there was not any upper age cut-off for the sample.

Sample:

There were different stages in the sampling procedure: Three stages: Subsamples (regions), municipalities and local communities. The subsamples in Serbia were: Belgrade area, province of Voivodina and Central Serbia. In order to get the average data for Montenegro should be multiplied by 13 (12.97). In each subsample, municipalities were chosen on the basis of cumulative frequencies, using tables of random numbers. In Serbia, 60 municipalities were included (approximately one half). Inside each municipality, local communities were chosen randomly (an election station as a survey point with 20 respondents). A systematic selection was applied from the

voters registration lists, starting from a random beginning (person under No. 2) and taking each tenth voter. For each 20 respondents, the plan ensured 20 reserves, chosen in the same way.

Unfortunately, during conducting the field study an alternative procedure had to be used in 7% of points (each third house in the point, picking up a person having the closest birthday), because in eight points the registration lists were incomplete or unavailable. Otherwise, the interviewers were obliged to make at least three visits in order to find the persons selected from the lists in the sample points. Substitution was permitted. If three visits were done without success (also, if respondent was moved, permanently out of place, died, unknown or seriously ill), reserve was used (next number on the list of voters)

Remarks about sampling:

-Final numbers of clusters or sapling points: 60 -Sample unit from office sampling: Named individual Election lists in local communities; Systematic choice, random beginning, each tenth citizen inside the last stage (local community)

Survey procedure:

Personal Face to Face Interview

Fieldwork:

The fieldwork was conducted by 60 interviewers in Serbia. The majority of them are B.A. psychologists (about two thirds), others are sociologists, social workers, political scientists, and specialized pedagogues. The interviewers observed the study, that is, the instrument as a very long and difficult for processing, but, at the same time, as very interesting, important and motivating for the interviewees. Control of interviewers' work consisted of three standard procedures: phone control of 10% cases, mail control of 20% cases (still not quite completed), and personal visits to 10% respondents. No indications of any serious irregularities were found until now. Interviewers were paid according to performance

Response rate:

Modalities of non-response in Serbia -Reject to be interviewed 9.7% -Seriously ill and persons at hospitals 4.3% -Absent because of travel 6.4% -Moved to some other place, changed addresses 7.4% -Busy persons (work shifts, on board, etc) 9.0% -Died 1.4% -Unknown persons 5.4% -Other reasons 4.8% TOTAL 48.4%

Remarks about non-response:

Note: The percentages are expressed in relation to a number of respondents in the sample, that is, 1060 in Montenegro. Response rate based on formula: $N/N + (R + I + B + T)$, where: N = Number of accomplished interviews R = Number of refusals I = Number of ill people B = Number of busy people T = Number of people absent because of travel. Response rate Serbia: 0.773

Weighting:

Weighting procedure is needed only for expressing data for FRY
