Preface	vi
Executive Summary	1
Chapter 1: Introduction	2
1.1 Background	2
1.2 Justification	2
1.3 Evidence-based decision making, policy-making, planning and administration	2
1.4 Research	2
1.5 Objective of the Survey	3
1.6 Specific Survey Objectives	3
1.7 Survey Methodology	3
1.7.1 Survey Sampling	3
1.7.2 Data Collection	4
1.7.3 Data Processing	4
1.7.4 Publicity	5
1.7.5 Analysis	5
1.7.6 Source of Funding	5
Chapter 2: Households and Population Demographic Characteristics	5
2.1 Introduction	5
2.2 Number of Households and Total Persons	5
2.3 Population Age Distribution	6
2.4 Demographic Dependency Ratio	8
2.5 Heads of Households and Household Size	9
2.6 Marital Status	10
2.7 Disability	11
2.7.1 Total Population with Disability (All Persons)	11
2.7.2 Disability of Population Aged 6 years & over	12
Chapter 3: Housing Units, Utilities and Services	13
3.1 Housing Units	13
3.2 Sources of Water Supply	14
3.3 Sources of Fuel	15
3.3.1 Sources of Lighting	15
3.3.2 Fuel Sources of Heating	16
3.3.3 Fuel Sources of Cooking	16
Chapter 4: Education and Training	17
4.1 Education	17
4.1.1 Reading in any language	18
4.2 Literacy rate	19
4.2.1 Literacy rate by Age group	19
4.2.2 District Literacy rates	20

4.3	Training	21
4.4	Population Still Attending School and Training	21
4.4.1	Estimated Population Still Attending School	21
4.4.2	Estimated Population still attending by Level of Education School	21
4.4.3	Population still attending School by District	23
4.5.	Usage of Computer/Laptop/Tablet	24
4.5.1	Frequency of usage of computer/ laptop/ tablet	25
4.6	Internet Access	25

Chapter 5: Labour Force Activities 26

5.1	Economic Activity	26
5.1a	The Employed Population	27
5.1b	The Unemployed Population	27
5.1c	Not Economically Active Population (NEAP) (Population Outside Labour Force)	27
5.1d	Population Aged 15 Years and Above	28
5.1e	Population Aged 18 Years and Over	29
5.1.1a	Employment Population Ratio (EPR)	29
5.1.1b	Labour Force Participation Rates (LFPR)	30
5.1.2	Currently Employed by District	31
5.1.3a	Currently Employed by Age Group 15 years and above	32
5.1.3b	Currently Employed by Age Group 18 years and above	33
5.1.4	Currently Employed by Occupation	33
5.1.5	Currently Employed by Industry	34
5.1.6	Currently Employed by Employer Category	36
5.1.7	Currently Employed by Education Level	37
5.1.8	Currently Employed by Training	38
5.1.9	Secondary Activity	38
5.1.10	Employed People from Poor Households (working poor)	39
5.1.10.1	Total Employed People from Poor Household	39
5.1.10.2	Employed Heads from Poor Households	40
5.2	Wage Employment	41
5.2.1	Wage Employment by District	41
5.2.2	Estimated Monthly Basic Salaries by Region	41
5.2.3	Estimated Monthly Value of Other Allowances	42
5.2.4	Estimated Monthly Tax Deducted from Wage	43
5.2.5	Formal and Informal Employment	43
5.2.6	Average Earnings	44
5.2.7	Salary Ranges	46
5.3	Currently Unemployed	46
5.3.2	Currently unemployed by duration looking for Work	48
5.3.3	Currently Unemployed by Education Level	48
5.3.4	Currently Unemployed by Training Level	49
5.4	Youth (15 – 35 years) Economic Activity	49
5.4.1	Youth (15 – 35 years) Labour Force	49
5.4.2	Unemployed Youth	49
5.4.3	Employed Youth	50
5.4.4	Youth Not in Education, Not in Employment or Training (NEET)	52
5.4.5	Youth from Poor Households	53
5.5	Population Outside Labour Force	54
5.6	Disability in Labour Force	55
5.6.1	Currently Employed Population with Disability	55
5.6.2	Unemployment by Disability	55

5.7.	Business Household Characteristics	55
5.7.2	Household Enterprises' Characteristics	60
5.7.3	General Information	61

Chapter 6: Poverty Incidence and Profiles 64

6.1	Poverty Incidence	64
6.1.1	Poverty Incidence Percentage Shares by Strata, Sex and Age Group	64
6.1.2	Poverty Incidence Percentage Shares by Sex and Age Group	66
6.1.3	Poverty Incidence by Districts and Sub-Districts	69
6.2	Summary Profile of Poor Persons and Households	76
6.2.1	Poverty Incidence at Household Level by Sex of Head	69
6.2.2	Distribution of Poor Households by Main Source of Income	70
6.2.3	Poor Households by School Attendance of Head of Household	71
6.2.4	Poor Households by Training of Head of Household	72
6.2.5	Poverty Incidence by Disability of Head of Household	73
6.2.6	Poverty Incidence by Chronic Illness of Head of Household	74
6.2.7	Poverty Incidence by Marital Status of Head of Household	74
6.2.8	Poverty Incidence by Household Size	75
6.2.9	Social Protection Packages	76
6.3	Summary Profile of Poor Persons and Households	76

Chapter 7: Incomes and Expenditures of Households 77

7.1	Introduction	77
7.2	Household Disposable Incomes & Income Distribution	78
7.3	Household Savings and Current Outlays	79
7.4	Average Household Expenditure by Consumption Item and Other Outlays-Pula	80
7.5	Household Consumption Inequality	82
7.6	Average Household Expenditure by Consumption Item and Other Outlays-Pula	82
7.7	Self-Assessed Well-Being and Food Insecurity	84

Definition of Terms and Concepts	86
1. Appendix: Tables: Demographic Characteristic	91
2. Appendix: General Disability	97
3. Appendix: Education And Training	105
4. Appendix: Labour Force Activities	136
5. Appendix: Poverty	339
6. Appendix: Income	352

Preface

This report presents the results from the 2015/16 Botswana Multi Topic Household Survey which was conducted from November 2015 to October 2016. The BMTHS was preceded by the 2009/10 Botswana Core Welfare Indicators Survey (BCWIS) which was commonly known as the Poverty Survey. The BCWIS was an expansion of the 2002/03 Household Income and Expenditure Survey (HIES) to include other dimensions of human wellbeing.

The main purpose of the 2015/16 BMTHS was to provide a comprehensive set of household and individual level indicators for poverty and the labour market such as the Poverty incidence, employment and unemployment levels.

The BMTHS survey was a combination of the labour and poverty surveys. It had a total of sixteen modules covering a range of topics. Multi-modular/multi-topic surveys in their nature are designed to produce multidimensional welfare indicators at household and individual level; which allows for enriched analysis and in-depth profiling of the households/individuals through the different modules administered on the same households and individuals.

The survey covered a sample of households across districts and sub-districts. It did not cover institutions such as prisons, army barracks, hospitals and other institutions because the survey was meant to investigate poverty and employment levels at households and individual level. Each household was visited over a period of two weeks to administer the questionnaire and a two weeks diary to record household consumption and expenditure. This was done with consideration of respondent fatigue.

The report entails executive summary of the main results followed by an introduction chapter 1, which includes the overview and scope of the survey. Chapter 2 covers the population demographics and household characteristics; Chapter 3 is on housing units, utilities and services; Chapter 4 covers education and training followed by labour force activities in Chapter 5. Chapters 6 and 7 present poverty incidence and profiles and incomes and expenditures of households respectively. Results on the dollar a day poverty incidence are not included in this report as a more comprehensive review on these are continuing.

Due to the extensive work involved in processing the data, and producing a report for a survey of its magnitude, the release dates were re-scheduled. Some of the topics will be covered in more detail through subsequent statistical briefs.

Dr. Burton Mguni
Statistician General
December 2018

Executive Summary

The BMTHS was conducted from October 2015 to November 2016. The primary objective of the 2015/16 BMTHS was to provide a comprehensive set of indicators for poverty and labour market and to serve as a launch pad for the Continuous Botswana Multi-Topic Household Survey (CBMTHS). The survey carried modules on household consumption and expenditure; education, health, access to amenities, economic activity, and household enterprises among others.

Provisional results on economic activity and poverty incidence were released in August 2017 and January 2018 respectively.

The survey showed that poverty levels have declined over the past five years (2009/10 to 2015/16). The proportion of people living below the poverty datum line has dropped by three (3.0) percentage points from 19.3 to 16.3 percent during the period. At household level poverty has reduced from 10.8 to 9.0 percent.

The results showed a decrease in home ownership, with 49.9 percent of households living in their own housing units compared to 57.6 percent which was realised in 2009/10 BCWIS. The use of electricity increased, with 64.4 percent of households using electricity for lighting in 2015/16, compared to 46.0 percent in 2009/10 and 27.0 percent in 2002/03. The results showed that the main source of water supply was piped outdoors (within yard/plot) at 42.0 percent, which is an increase from 32.4 and 41.1 in 2002/03 and 2009/10 respectively.

At district and sub-district level poverty is most prevalent in Kweneng West with 50.6%, Ngwaketse West with 40.3% and Kgalagadi South at 39.5%.

Within strata, poverty is more prevalent among female headed households compared to their male counterparts with 55.0% and 45.0% respectively.

The results showed an increase in consumption Gini coefficient from 0.495 in 2009/10 to 0.522 in 2015/16 at national level. At stratum level, the rural areas recorded an increase from 0.438 to 0.474, while in urban areas the consumption inequality increased from 0.510 to 0.518.

The largest share of consumption expenditure was allocated to transport (23.9%), followed by housing costs (17.9%) and food (12.8%).

The total number of the Employed population from the 2015/16 BMTH Survey was estimated to be 689,528, 348,993 of which were males (50.6 percent) and 340,535 were Females (49.4 percent). Most of the employed population were concentrated in Urban Areas estimated at 41.1 percent.

National unemployment rate was estimated at 17.6 percent (revised from 17.7 percent which was reported in the August 2017 Labour Force statistical brief). Unemployment rate for females was 18.9 percent compared with 16.3 percent for males. Unemployment rate was highest for age groups 15-19 and 20-24, which recorded rates of 40.2 and 37.3 percent, respectively.

Monthly average earnings were estimated at P4, 501 for citizens, P6, 538 for non-citizen and P4, 594 for all employees. Under waged employment, at 25.7 percent had monthly salaries/wages ranging between P1001 – P2000.

Chapter 1: Introduction

This chapter presents a background and justification to the conduct of BMTHS, giving an overview on the objectives and survey methodology, and the different phases and strategies employed in executing the survey.

1.1 Background

Statistics Botswana's endeavour to reduce the intervals of the labour force and poverty surveys to five (5) years though an improvement, coincided with heightened need for more frequent data by stakeholders, rendering the five (5) year interval insufficient. Specifically, the Human Resource Council (HRDC) and Poverty Eradication Coordination Unit (PECU) of the Office of the President (OP) expressed to Statistics Botswana their need for annual labour market indicators and Poverty indicators, respectively.

In a holistic response to the ever increasing needs by stakeholders for more frequent data, Statistics Botswana decided to combine the Labour Force Survey (LFS) and Botswana Core Welfare Indicators Survey (BCWIS) planned for 2015/16 into one (1) Multi-Topic Household Survey. The combined LFS and BCWIS, from henceforth called the Botswana Multi Topic Household Survey (BMTHS) is the baseline survey that will provide indicators on various topics, and lay the foundation for annual surveys, with BCWIS and LFS modules forming the foundation upon which other topics' modules will be rotated as per the stakeholder needs.

1.2 Justification

The information generated from BMTHS, will, amongst others, be used for policy formulation and programming for National Development Plans, National Vision and Post 2015 development agenda. Key areas that will benefit from the BMTHS information will be poverty eradication and job creation by utilizing information on poverty and labour force.

1.3 Evidence-based decision making, policy-making, planning and administration

Poverty Eradication, Employment Creation and Improvement of Skills base have been identified by government among a set of national priorities from 2015/16 going forward. For government to deliver on the national priorities there is need for indicators to inform policy formulation and programming. To this end, BMTHS information will be useful to ensure evidence based decision making on national priorities.

1.4 Research

Being a multi topic survey, BMTHS will provide a wealth of information that will allow for multivariate analysis, to further generate increased knowledge on various aspects of relevant policies, leading to robust policy documents and research material. This will lead to an interactive live policy space supported by continuous flow of information, which allows for rotation of modules as per the needs of the stakeholders.

1.5 Objective of the Survey

The primary objective of the 2015/16 BMTHS is to provide a comprehensive set of indicators for poverty and labour market. The set of indicators derived from the BMTHS will provide baseline information that will be tracked on an annual base to inform the Poverty Eradication Strategy and poverty eradication programmes implemented by various stakeholders, and the labour market indicators required by stakeholders responsible for manpower and skills planning like the Human

Resource Development Council among others.

Statistics Botswana plans to have the 2015/16 BMTHS as a launch pad for the Continuous Botswana Multi-Topic Household Survey (CBMTHS), which will be responsive to immediate stakeholder data needs, by rotating modules on topics as prioritised by stakeholder needs.

The ultimate objective of the BMTHS is to produce a high frequency programme of household surveys that is predictable, flexible and amenable to the ever increasing and changing data needs for government, private sector, planners and researchers. The BMTHS provides a permanent platform for the collection of socio-economic data.

1.6 Specific Survey Objectives

The BMTHS provides more frequent, stakeholder specific data that enable policy makers and planners to use real time data in formulation of policies and programmes. The continuous (yearly) nature of the BMTHS will allow for close monitoring of programmes, ensuring timely interventions and programme/policy fine tuning. This will lead to robust, responsive relevant programmes that would ultimately improve on the livelihoods of Botswana and the economy. Savings on the development budget would be realized due to effective informed policies and programmes.

The BMTHS is set out to;

- provide socio-demographics of the Botswana population;
- Provide poverty datum line (PDL) in the country
- Provide a list of indicators that monitor poverty
- Provide disaggregated information on poverty levels for monitoring and evaluation of eradication programmes on more regular basis
- Continuously provide profiles of poor households.
- Profile the poor to assist stakeholders identify the poor among the population
- Provide household expenditure information to be used in re-basing of Consumer Price Index
- Measures of both current and usual economic activity
- Obtain a measure of the size of employment in both formal and informal sectors
- Measure of unemployment and underemployment
- Determine the size of economically active and inactive population
- Provide information on education attainment, occupation and employment status
- Determine the impact of education and health among on poor population;
- Determine the impact of agriculture among the poor population.

1.7 Survey Methodology

Survey methodology outlines the sampling, data collection, processing, publicity and analysis methodologies and strategies employed in the conduct of the BMTHS.

1.7.1 Survey Sampling

The Botswana Multi-Topic Household Survey like most national surveys, employed a two stage stratified sampling design. The procedure was made plausible by the existing stratification of twenty-seven (27) census districts which are heterogeneous in nature and are aligned to administrative districts. In this structure, the census districts were further grouped into three (3) domains, being; cities/ towns, urban villages and rural areas.

The survey only targeted households in all districts and sub-districts. It did not cover institutions such as prisons, army barracks, hospitals and other institutions because the survey was meant to investigate poverty and employment levels at households and individual level.

In light of the above, the first stage was the selection of Enumeration Areas (EAs) as Primary Sampling Units (PSUs) with Probability Proportional to Size (PPS) where measure of size is the number of households in an EA as defined in the 2011 Population & Housing Census. This yielded 599 Enumeration Areas.

In the second stage, households were the Secondary Sampling Units (SSUs) and were systematically selected from the listed households in the selected EA's (PSUs). This yielded 7,188 households. Based on the estimated number of households, 25,130 persons were expected to participate in the 2015/16 BMTHS survey. **Table 1.1** summarizes response rates for the survey.

Table 1.1: Survey Response Rates 2015/16

Variable	Estimates	Responses	Response rate
Enumeration Areas (PSU)	599	598	99.8
Households (SSU)	7,188	7,060	98.2
Persons Participation	25,130	24,720	98.4

Table 1.2 provides population estimates derived from the survey for comparison with those from the 2011 population and housing census and population projections for 2016. The survey estimated Botswana's population at 2,073,675 compared to the 2016 projected population of 2,219,736. This gives a 6.6 percent difference which may be attributed to the fact that the survey did not cover population in institutions as stated above.

Table 1.2: Population Estimates 2011-2016

Source	Male	Female	Total
2011 Population and Housing Census	988,957	1,035,947	2,024,904
2016 Population Projections	1,088,527	1,131,209	2,219,736
2015/16 BMTHS	976,409	1,097,265	2,073,675

1.7.2 Data Collection

The data was collected over a period of 12 months from November 2015 to October 2016. The twelve months long survey ensured accurate estimation of indicators that are highly affected by seasonality such as poverty and employment measures. The seasonal effects were addressed through computation of averages. Data was collected on various household characteristics including household demographics, education, health, economic activity, and agriculture among others.

A combination of electronic and paper-based data collection tools were used for the survey. A comprehensive household paper questionnaire was used to conduct interviews while a 14 day diary was used to collect data on food consumption, food and non-food purchases. The data entry system was loaded into laptops to enable data entry while in the field. The system had in-built edit specifications (for consistency and range checks) to ensure that data processing began in the field such that data gaps would be addressed while in the field.

1.7.3 Data Processing

Data processing started upon completion of the fieldwork. The process took more time than anticipated due to challenges of incomplete data entry from the field which needed to be verified in the office. For example, data entry mainly for diaries, and some of the household questionnaires had to be completed in the office; some of the data conversions were effected in the hardcopies only and not reflected in the system; conversions of food quantities (in the diaries) into standard measurement units had to be done in the office; missing codes (COICOP, industry and occupation codes) also had to be assigned to appropriate items.

1.7.4 Publicity

The Public was made aware about the Survey through Multi-media including radio broadcast, video clips on national television and print media. The field staff also put on branded attire and carried publicity material during the survey.

1.7.5 Analysis

Assistance in BMTHS analysis and analytical capacity building was received from the World Bank through the training in Stata Programme for analysis. The assistance largely focused on capacity building for poverty analysis.

1.7.6 Source of Funding

The BMTHS was funded by the Government of Botswana in partnership with the World Bank through technical support at different stages of the survey. The survey cost 46,782,850 with the inclusion of Transport, personal emoluments, data processing and other logistics.

Chapter 2: Households and Population Demographic Characteristics

This chapter presents results on population and household characteristics that include population, age and sex distribution, marital status, households' headship, size and dependency ratios.

2.1 Introduction

Information on the household characteristics was collected using the household questionnaire, which included the total number of people living in the household, how they related to the head of the household, their age and gender.

This chapter also highlights the demographic profile of the households and the population at national and strata levels. The statistics and indicators covered are numbers and characteristics of household members, and demographic dependency ratio among others.

2.2 Number of Households and Total Persons

The BMTHS estimated the total number of households to be 589,909, housing a total of 2,073,675 persons. This gives an average household size of 3.5 persons. It also represented a 13.2 and 15.0 percent growth, respectively for the number of households and persons when compared to the 2009/10 BICWIS which had 521,327 households and 1,803,398 persons. The results indicated a slight decrease in the proportion of male headed households at the national level from 54.3 to 53.4 percent. The results also show a constant percentage of male headed households in urban villages at 49.9 % in both periods and female headed households also maintaining 50.1% for the same periods. **Table 2.11** gives a summary of households and population by strata.

Table 2.1 T : Number of Households and Population Estimated during the BCWIS, 2009/10 and 2015/16

	2009/10 BCWIS				2015/16 BMTHS			
	Cities/ Towns	Urban Villages	Rural Areas	National	Cities/ Towns	Urban Villages	Rural Areas	National

2.3 Population Age Distribution

The survey results indicate that 34.4 percent of the population is aged under 15. At national level, age groups 0-4, 5-9 and 10-14 constituted 12.5, 11.6 and 10.3 percent of the total population respectively. **Figure 2.2** indicates that in cities and towns, age groups 20-24, 25-29 and 30-34 accounted for 11.70, 10.52 and 11.21 percent respectively, of the total population, whilst in urban villages and rural areas, the highest contributors to the population were similar to those at national level.

Figures 2.1 through **2.4** depict the age distribution of the population at national level and stratum level.

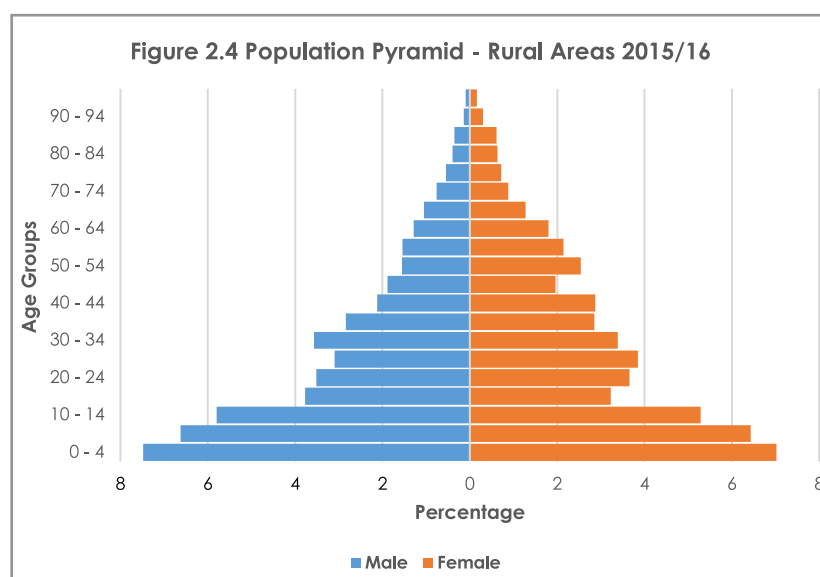

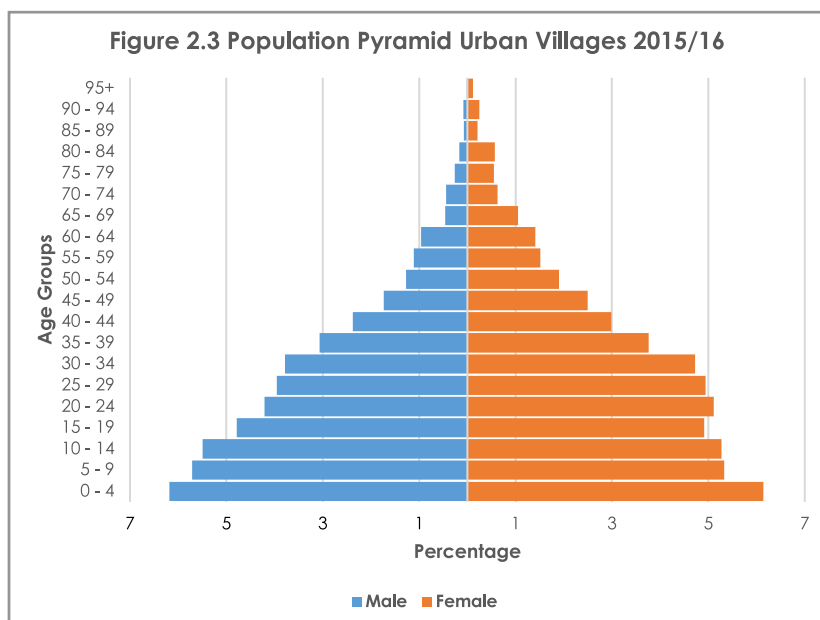

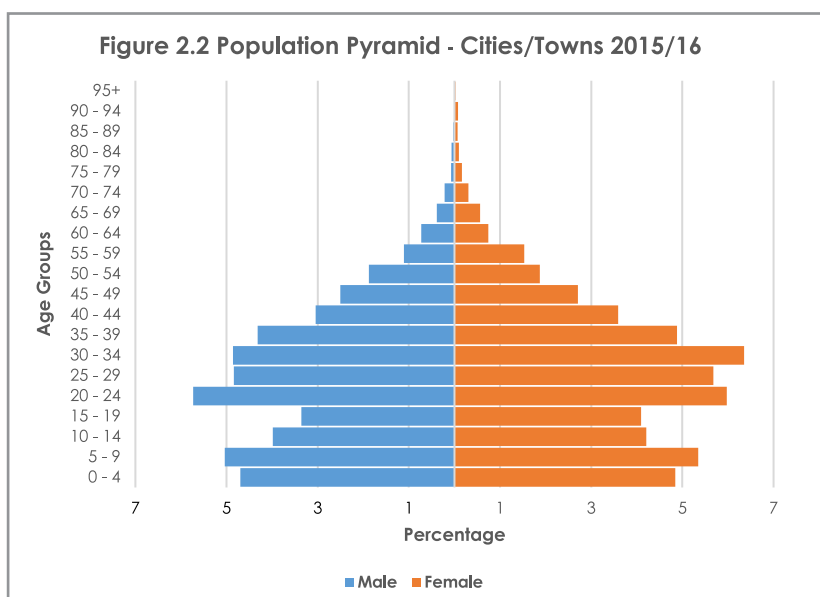

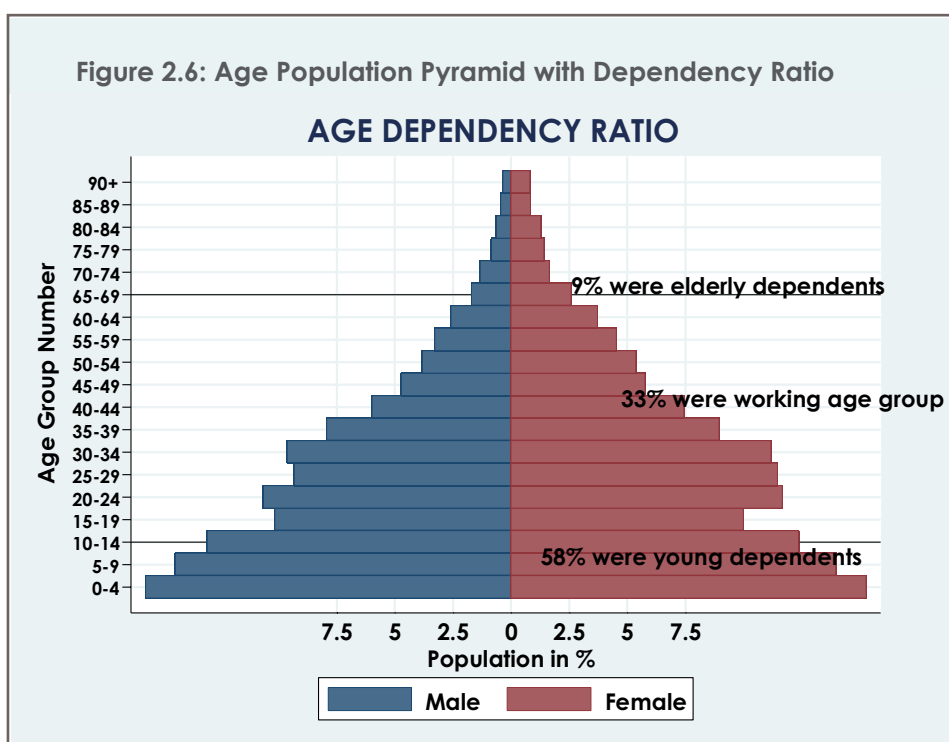

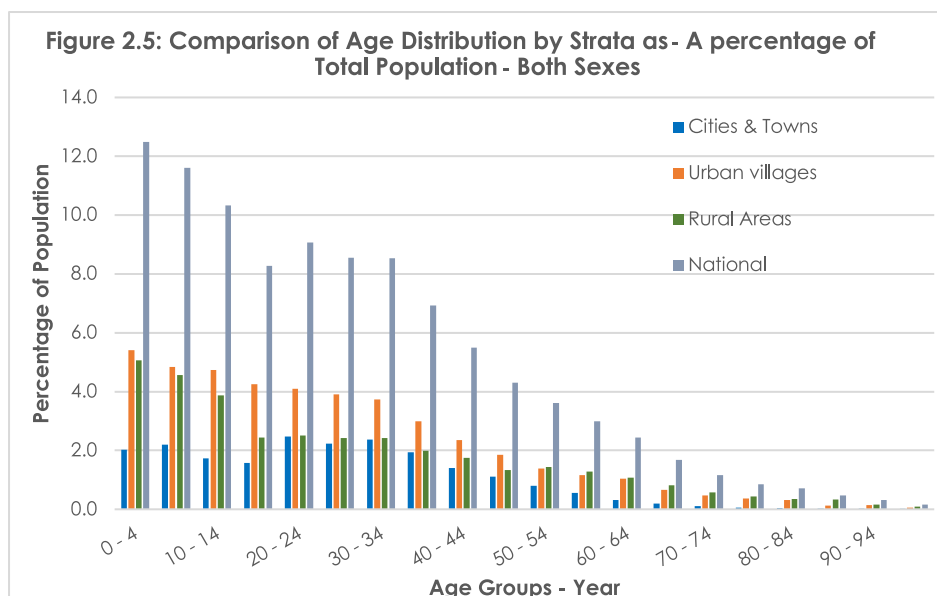

Figure 2.5 shows comparison of age distribution by strata as a percentage of the total population. Urban villages' contribution to the total population was highest for age groups 0-4 through 45-49 years.

2.4 Demographic Dependency Ratio

The dependency ratio measures the percentage of dependent people (less than 15 and 65 years and above) divided by the number of people of working age (15 - 64).

The BMTHS survey results show that child dependency ratio was 57% while adult dependency rate was 9% as reflected in [Table 2.4T](#) & [Figure 2.6](#).

Table 2.3 T: Population Age Dependencies by Strata 2015/16

	Cities/Towns	Urban Villages	Rural Areas	National
Children (0-14 years)	122,993	310,532	279,900	713,424
Working Age (15-64 years)	305,934	555,685	387,251	1,248,869
Elderly-dependency (65+)	9,336	44,805	57,241	111,382
Total	438,262	911,022	724,391	2,073,675

Table 2.4 T: Age Dependency Ratios (Child & Elderly Dependency ratios) by Strata 2015/16

	Cities/Towns	Urban Villages	Rural Areas	National
Child Dependency	0,40	0,56	0,72	0,57
Elderly-dependency	0,03	0,08	0,15	0,09
Total Dependency Ratio	0,43	0,64	0,87	0,66

2.5 Heads of Households and Household Size

The average age for the household head as per the results of the 2015/16 BMTHS survey was estimated at 46 years of age (**Table 2.5 T**). This was an increment by one year when compared to the estimate of 2009/10 BCWIS. It was also observed that for male headed households, in 2009/10 BCWIS the age groups of 20-29 and 30-39 had the highest percentage, but for 2015/16 BMTHS a different result was estimated. There was a shift, in that most household heads were in the age groups of 30-39 and 40-49.

The average household size shows an increase from 3.46 in the BCWIS to 3.5 persons per household in the BMTHS. **Table 2.5T** and **Figure 2.7** present the distribution of households by sex and age group of household head.

Table 2.5 T: Percentage Summary Distribution of Households Heads by Age Group of Household Head and Sex

Households	2009/10			2015/16		
	Male	Female	Both Sexes	Male	Female	Both Sexes
Age Groups	283,004	238,323	521,327	315,080	274,829	589,909
Percentage of Households Heads						
12 - 19	1.20	1.10	1.20	1.01	0.48	0.76
20 - 29	20.70	16.60	18.80	16.50	12.91	14.83
30 - 39	26.50	22.60	24.70	28.40	23.22	25.99
40 - 49	18.20	20.60	19.30	21.75	20.68	21.25
50 - 59	15.20	16.40	15.80	15.07	17.70	16.30
60 - 69	9.60	9.30	9.50	9.67	12.49	10.98
70 +	8.50	13.50	10.80	7.60	12.54	9.90
Total	100.00	100.00	100.00	100.00	100.00	100.00
Median Age	40.00	44.00	42.00	41.00	46.00	43.00
Mean Age	43.80	46.70	45.20	44.10	48.10	46.00
Average House-hold Size	3.17	3.80	3.46	3.18	3.89	3.51

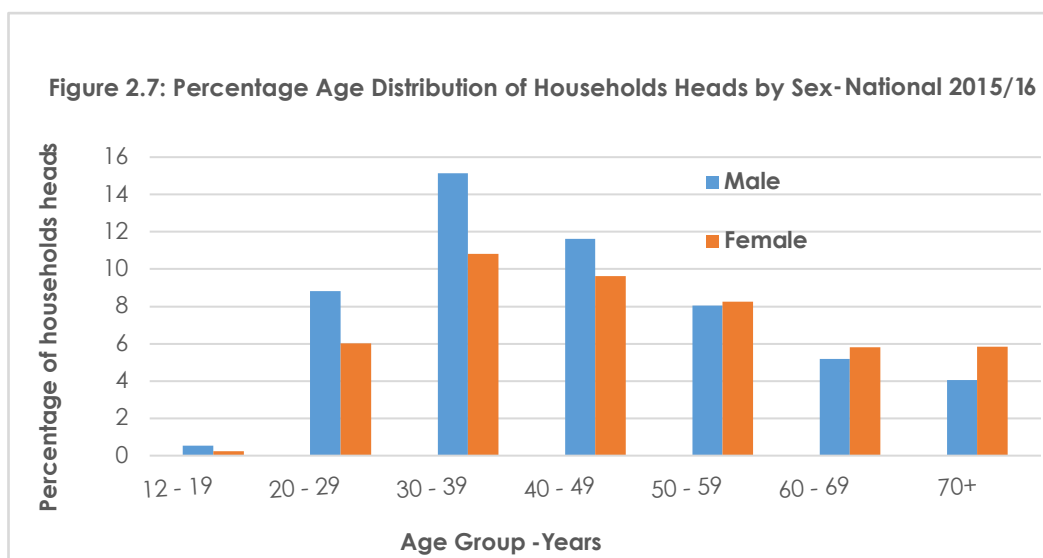

Figure 2.7 shows that for age groups 20-29 through 40-49, there were more male headed households compared with female headed households; and the opposite was observed for older age groups of 50-59 years and above.

2.6 Marital Status

Table 2.6T and **Figure 2.8** present the marital status of heads of households by sex at national level. The BMTHS results show a decrease of 4 percentage points of the “never married” household heads from 37.2% in the 2009/10 BCWIS to 33.1% in the BMTHS.

The percentage of heads of households which were married showed a decrease from 26.9% in the 2009/10 BCWIS to 25.3% in the BMTHS while the Percentage “living together” has increased from 20.4 to 27.3 between the two survey periods.

The 2009/10 showed that, of the 54.3 percent of male heads of household, 21.6 and 15.9 percent were “married” and “never married” respectively, while in the BMTHS 20% of the male household heads were married and 14.2 never married. The category with the highest percentage among the female heads of household was the “never married” at 18.9% in the BMTHS which is about 2 percent decrease from 21.3% observed in the 2009/10 BCWIS.

Table 2.6 T: Marital Status of Heads of Households by Sex 2002/03 and 2009/10- National - Percentages

Marital Status	2009/10			2015/16		
	Male	Female	Both sexes	Male	Female	Both sexes
Married	21.6	5.4	26.9	20.0	5.2	25.3
Living together	13.8	6.6	20.4	16.9	10.4	27.3
Separated	0.5	0.8	1.3	0.4	1.5	1.9
Divorced	0.7	1.6	2.2	0.6	1.5	2.1
Widow/Widower	1.8	10.1	11.9	1.3	9.1	10.4
Never married	15.9	21.3	37.2	14.2	18.9	33.1
Total	54.3	45.7	100.0	53.4	46.6	100.0

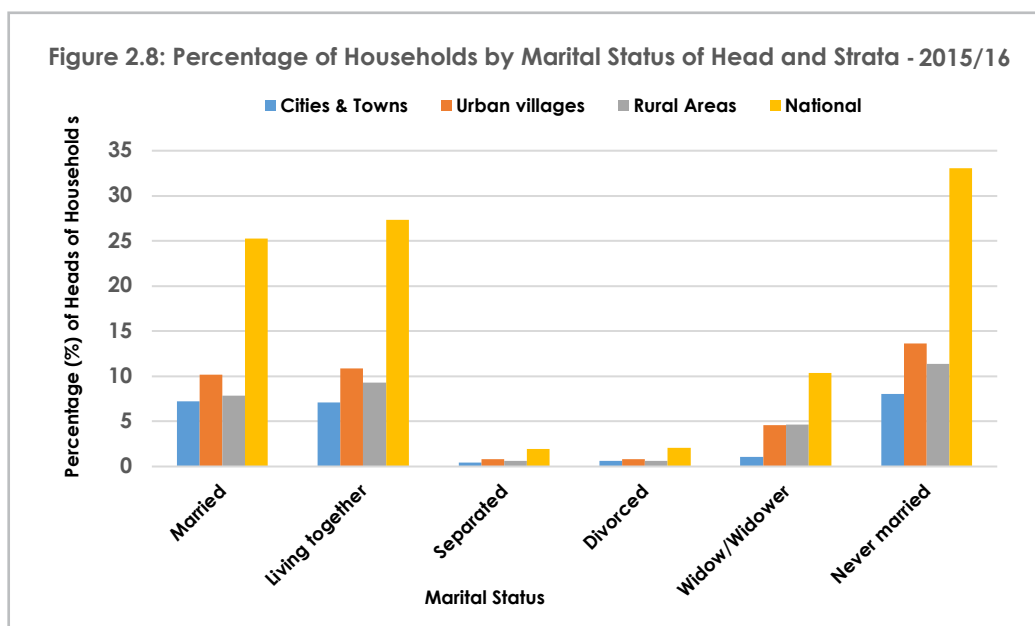

Figure 2.8 presents marital status of heads of households by strata. The results showed that at national level the proportion of “never married” heads of households was highest with 33.1%, whilst the same category was observed to be the highest in urban villages at 13.6%

2.7 Disability

The BMTHS survey collected information on disability on all persons. It was based on whether an individual had some form of difficulty that prevent him/her from doing any form of activity, for example, seeing, walking, communicating. In addition information on the cause of difficulty and when it began was also collected.

Population with disability was selected based on the following responses:

- i) Yes, a lot of difficulty
- ii) Cannot do it at all

The difficulties were as follows:

- Difficulty in seeing even if wearing glasses,
- Difficulty in hearing even if using hearing aid
- Difficulty in walking or climbing steps
- Difficulty in remembering or concentrating
- Difficulty with self-care
- And difficulty in communicating

2.7.1 Total Population with Disability (All Persons)

The survey estimated that from the population of 2 073 675, a total of 56,555 (2.7 percent) persons reported to have some form of disability. Of these persons, 20,382 persons were males, while 36,173 persons were females.

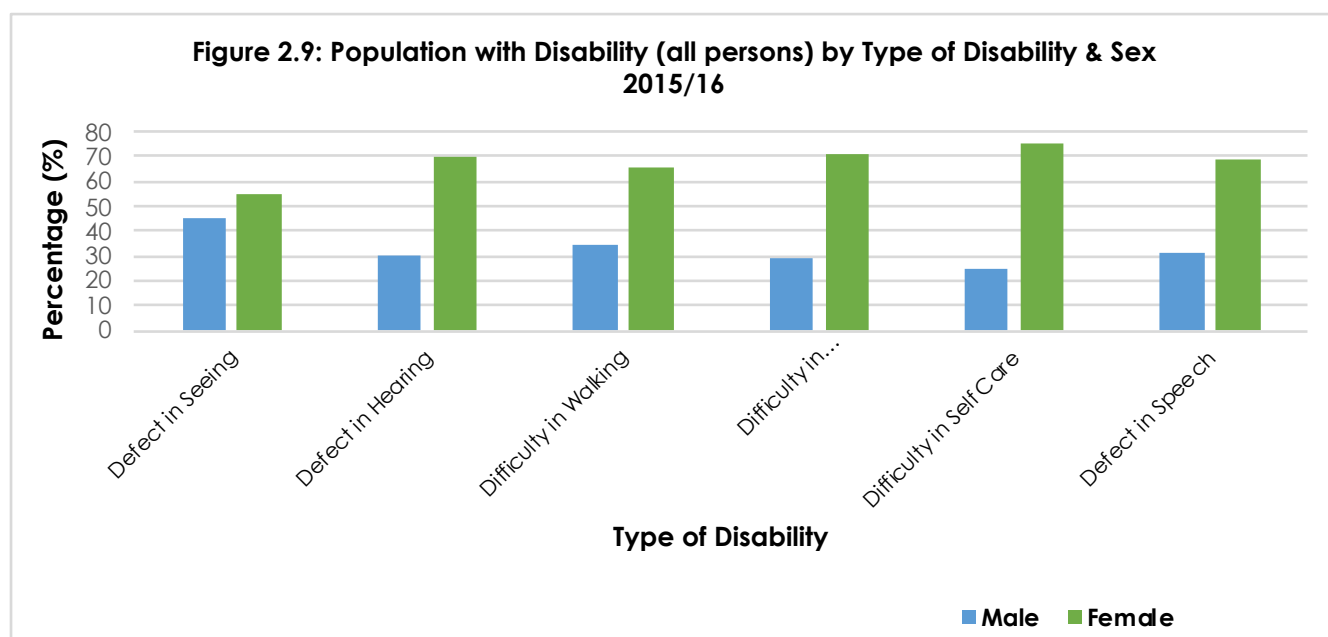

The most common disability reported is defect in seeing (37.9 percent) followed by defect in hearing with 24.5 percent. See **Table 2.7T** below.

In addition, according to **Table DS3** in the appendix, it can be concluded that disability increases with age. Age group 75 & above constituted the highest percentage (29.4percent) of the total with disability.

Table 2.7T: Population with Disability (all persons) by Type and Sex 2015/16

Type of Disability	Count			Percentage		
	Male	Female	Total	Male	Female	Overall Total
Defect in Seeing	9,632	11,794	21,426	45.0	55.0	37.9
Defect in Hearing	4,153	9,731	13,884	29.9	70.1	24.5
Difficulty in Walking	3,587	6,930	10,517	34.1	65.9	18.6
Difficulty in Concentrating/Remembering	1,589	3,793	5,383	29.5	70.5	9.5
Difficulty in Self Care	993	2,986	3,979	25.0	75.0	7.0
Defect in Speech	428	939	1,367	31.3	68.7	2.4
Total	20,382	36,173	56,555	36.0	64.0	100.0

Looking at disability by sex, females dominated in all categories than males. For example, looking at difficulty in hearing 70.1 percent were females while 29.9 percent were males.

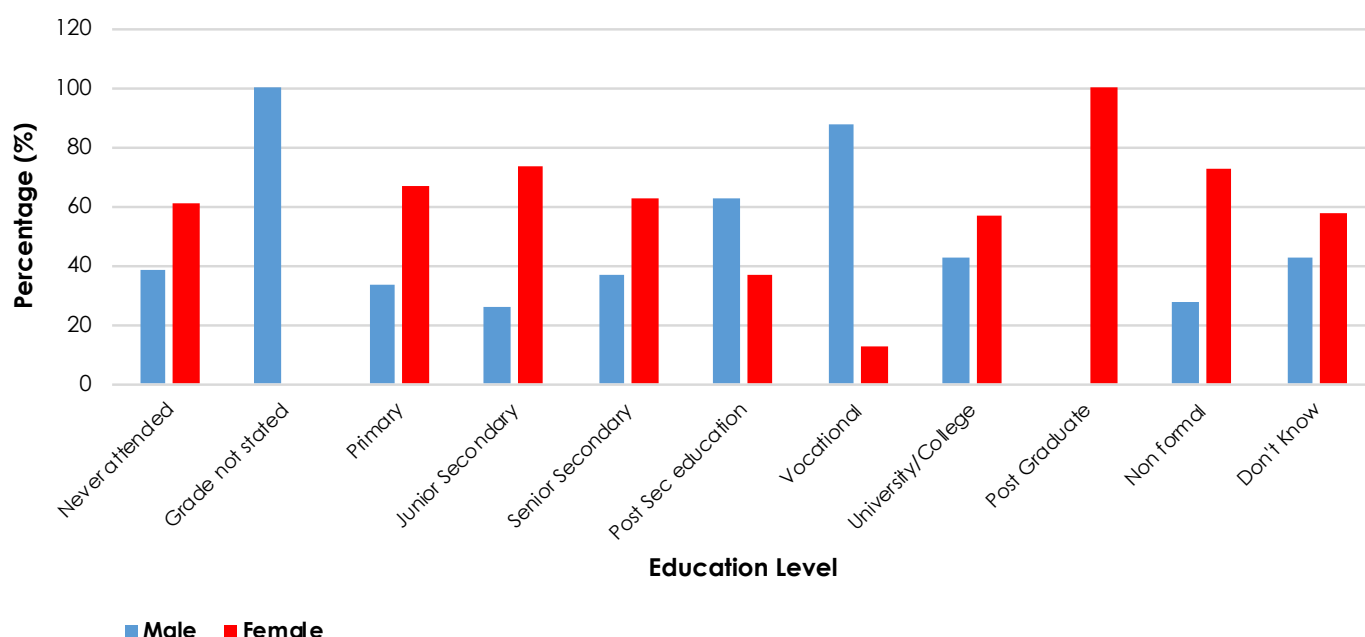

2.7.2 Disability of Population Aged 6 years & over

A total of 56,377 persons aged 6 years and above reported to have some disability.

Disability by Education shows that from a total of 56,377 persons aged 6 years and above, 20,018 persons (35.5 percent) never attended school whereas 18,627 persons (33 percent) completed their primary education. Moreover when within sex, 87.3 percent of males completed vocational Education as compared to only 12.9 percent of females. See [Table 2.8T](#) below

Table 2.8T: Percentage Distribution of Population with Disability (6 Years and Over) 2015/16

Education Level	Count			Percentage		
	Male	Female	Total	Male	Female	Total
Never attended	7,759	12,259	20,018	38.8	61.2	35.5

Total	20,288	36,089	56,377	36.0	64.0	100.0

Figure 2.10: Disability of Population aged 6 years & Over by Education Level & Sex 2015/16

Chapter 3: Housing Units, Utilities and Services

Chapter 3 presents results on housing, covering ownership, access to amenities that include water and electricity. Also included in this chapter are types of housing units and sources of household fuels.

3.1 Housing Units

The results showed that possession of housing units by households (49 percent) is almost the same as compared to households that do not own housing units (49.9 percent). This indicated a decrease in housing unit ownership as compared to 2002/03 HIES and 2009/10 BCWIS which had recorded 60.6 and 57.6 percent correspondingly (housing ownership for HIES and BCWIS includes Purchased, inherited and self-build). At National level, the results showed that 65.2 percent of households lived in rented housing unit. This showed an increase in rented housing units. This was in comparison to 32 and 39 percent for 2002/03 HIES and 2009/10 BCWIS. However these vary significantly by strata,

Cities/Towns recorded 79.1 percent of rented housing followed by 72.4 percent in urban areas. It is worth noting that majority of housing units are not rented in rural areas.

Moreover, of the housing units provided free of charge 50.7 percent were provided by relatives and 33.9 percent provided free by employers.

Table 3.1 T: Mode of Acquisition of Housing Unit by Strata 2015/16 Percentage

						HIES 2002/03	BCWIS 2009/10
Mode of Acquisition		Cities/ Towns	Urban Villages	Rural areas	National	National	National
Is dwelling yours?	yes	23.7	48.5	67.7	49	60.6	57.6
	no	74.1	50.6	31.8	49.9	37.9	42.5
	Total	100.0	100.0	100.0	100.0	100.0	100.0
Do you pay rent for this?	Not stated	0.4	0.2	0.5	0.3		
	yes	79.1	72.5	28	65.2	32	33.9
	no	20.6	27.2	71.5	34.5	66.5	66.2

	Other	9.1	12.1	4.3	7.9		
	Not Stated	2.2	0.9	0.5	1.1		
	Total	100.0	100.0	100.0	100.0	100.0	100.0

3.2 Sources of Water Supply

The BMTHS results showed that the main source of water supply at national level is piped outdoors (within yard/plot) at 42.0 percent. This was an improvement from the findings of the 2002/03HIES and 2009/10 BCWIS, which had indicated 32.4 and 41.1 percent of households as having access to piped water, respectively. Additionally, 9.1 percent had access to communal taps within their localities. This was a decrease compared with the findings from BCWIS 2009/10 that revealed 18.5 percent of rural households having access to communal taps within their localities. The proportions between piped water in compounds and access to communal taps indicate great access to piped water in compounds from 2002/03 to 2015/16. **Table 3.2 T** provides detailed proportions on sources of water for households.

Table 3.2 T Sources of Water Supply

Sources of water	HIES 2002/2003				2009/2010 BCWIS				2015/2016 BMTHS			
	Cities/ Towns	Urban Villages	Rural Areas	National	Cities/ Towns	Urban Villages	Rural Areas	National	Cities/ Towns	Urban Villages	Rural Areas	National

3.3 Sources of Fuel

The BMTHS survey sought to establish principal sources of fuel for households across the strata. **Tables 3.3T, 3.4T, 3.5T** presents trends on fuels used by households for lighting, cooking and heating respectively.

3.3.1 Fuel Sources of Lighting

Table 3.3 T shows that at national level the principal source of lighting for households was Electricity at 64.4 percent. Results showed that the principal source of lighting for households has increasingly become electricity, which was 27.0 and 46.0 in 2002/03 and 2009/2010 respectively. Usage of electricity as the principal source of lighting by strata was highest in Cities/Towns at 81.6 percent followed by urban areas with 79.1 percent and lastly rural areas at 34.6 percent. The second most used source of lighting is paraffin which indicated a decline over the period 2002/03 to 2015/16 from 53 percent of households in 2002/03, to 32 percent in 2009/10 and 15.7 percent of households in 2015/16 used paraffin as the main source of lighting.

Table 3.3.T: Household Principal Fuel for Lighting - 2002/03. 2009/10 & 2015/16 - Percentage

Main source of lighting	BMTHS 2015/16				BCWIS 2009/10	HIES 2002/3
	Cities/ Towns	Urban Villages	Rural areas	National	National	National
Electricity	81.6	79.1	34.6	64.4	46.0	27.0
Solar Power	0.5	0.3	4.0	1.7	-	-
Electricity From a generator	0.2	0.1	0.2	0.2	-	-
Gas (LPG)	0.1	0.0	0.0	0.0	0.0	0.0

Not Stated	2.3	1.1	0.5	1.2	-	-
100.0	100.0	100.0	100.0	100.0	100.0	100.0

3.3.2 Fuel Sources of Heating

The BMTHS 2015/16 showed that at national level electricity was the principal source of heating by households with 28.51 percent. This was followed by wood at 24.76 percent. In Cities/Towns, 46.0 percent of households indicated to be using electricity as the principal source of heating, this was in comparison to 31.3 and 12.7 percent in Urban Villages and rural Areas respectively. The results shows that Wood was mostly used in rural areas, with 44.6 percent, followed by urban villages, 19.6 percent, and cities and towns at 5.7 percent of households.

Table 3.4. T Household Principal Source for Heating -2015/16

Source for heating	BMTHS 2015/16			
	Cities/Towns	Urban Villages	Rural areas	National
Electricity	46.0	31.3	12.7	28.5
Solar Power	0.2	0.1	0.4	0.2
Gas (LPG)	1.7	1.7	0.9	1.4
Wood	5.7	19.6	44.6	24.8
Cow-Dung	0.2	0.2	0.2	0.2

Not Stated	2.3	1.0	0.5	1.2
Total	100.0	100.0	100.0	100.0

3.3.3 Fuel Sources of Cooking

The Principal fuel for cooking at National level is wood with 36 percent; this is followed by gas (LPG) at 35.3 percent and electricity at 24.6 percent. Results showed that the principal source of cooking for households has continued to be wood. The trend shows that the principal usage of fuel for cooking is at a declining rate. These findings from the 2002/03HIES and 2009/10 BCWIS are 46.0 percent 42.0 percent respectively. At Stratum level rural areas showed a higher usage of the principal source of cooking (wood) at 72.4 percent while Cities/towns recorded a higher usage for Gas (LPG) at 57.1 percent. Housing units in Urban Villages recorded Gas (LPG) as their main source of cooking at 41.0 percent.

Table 3.5 T Household Principal Fuel for Cooking- 2002/03, 2009/10 & 2015/16

Source for Cooking	BMTHS 2015/16				2002/03 HIES	2009/10BCWIS

Chapter 4: Education and Training

Education and training module was administered to individuals aged two (2) years and above. The module sought to establish the number of persons in and out of school, and those still training, and/or who attained some training. The results would be used to plan for schools, training programmes and understand the characteristics of the labour force.

4.1 Education

Education module was administered for ages two years and above. The module sought to find characteristics on school enrolment, literacy and other education related issues.

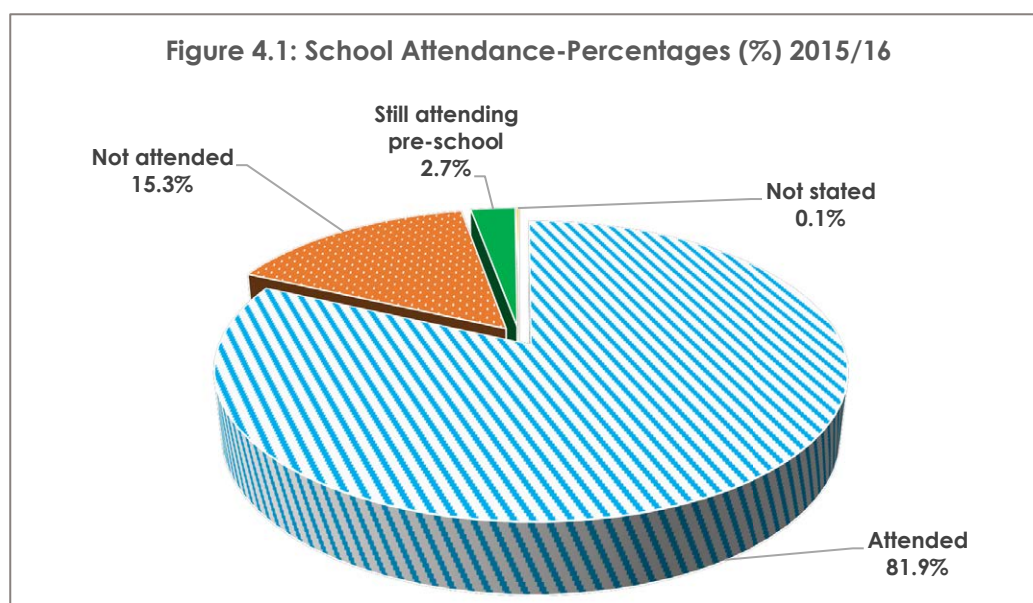

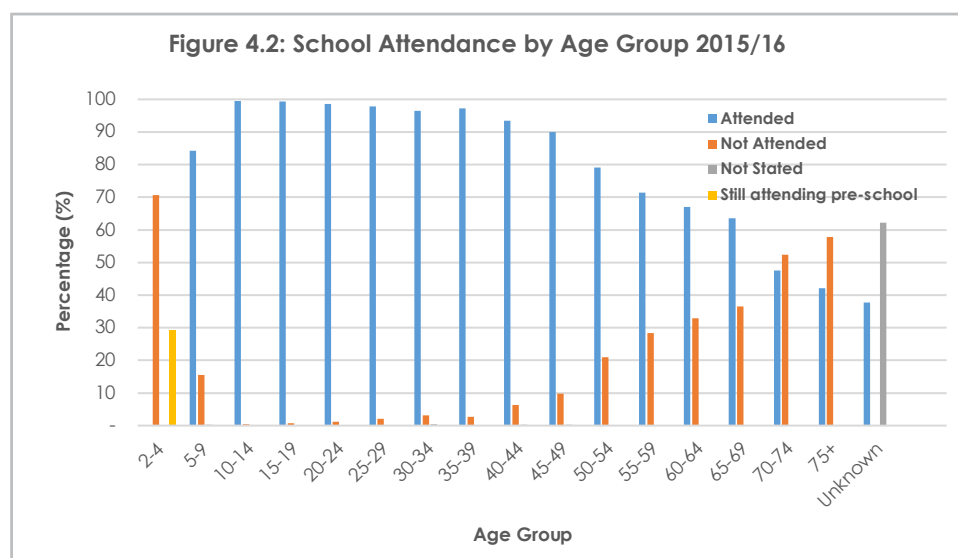

Figure 4.1 above shows percentages of school attendance for population aged two (2) years and above. Overall, 81.9 percent of the population attended school. This is a 2.9 percentage point increase as compared to the 79.0 percent estimate that was recorded for the 2009/10 BCWIS.

Table 4.1T: School Attendance by Age group 2015/16

Age Group	2015/16 BMTHS				2009/10 BCWIS	
	Attended	Not Attended	Not Stated	Still attending pre-school	Attended	Not Attended
2-4	-	70.6	-	29.4	10.0	90.0
5-9	84.3	15.5	0.2	-	76.0	24.0
10-14	99.6	0.4	0.0	-	99.0	1.0
15-19	99.3	0.7	-	-	98.0	2.0
20-24	98.6	1.2	0.1	-	97.0	3.0
25-29	97.8	2.0	0.1	-	95.0	5.0
30-34	96.4	3.2	0.4	-	95.0	5.0
35-39	97.2	2.7	0.1	-	91.0	9.0
40-44	93.5	6.3	0.2	-	86.0	14.0
45-49	90.0	9.8	0.2	-	75.0	25.0
50-54	79.1	20.9	-	-	63.0	37.0
55-59	71.4	28.4	0.1	-	62.0	38.0
60-64	67.0	32.8	0.2	-	56.0	44.0
65+	50.0	49.9	0.1	-	38.0	62.0
Unknown	37.8	-	62.2	-	-	-
Total	81.9	15.3	0.1	2.7	79.0	21.0

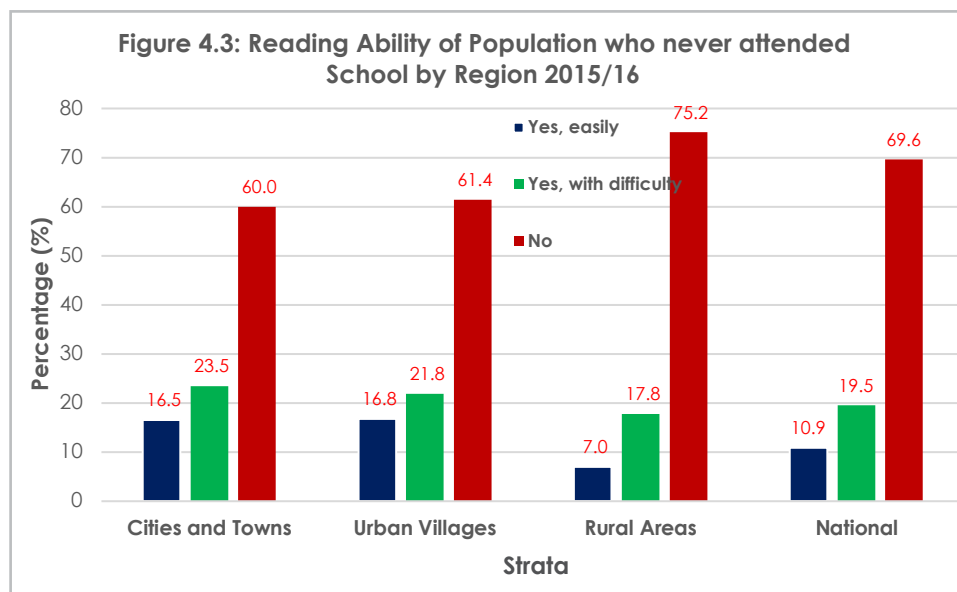

Percentage of school attendance by age, as shown in **figure 4.2** above, indicates that from age group 5-9 to 35-39, school attendance was relatively high. Attendance over these age groups ranged from 96.4 to 99.7 percent while age group 40-44 recorded 93.5 percent. Attendance in the subsequent age groups was decreasing, reaching 37.8 percent for age group 75+. Overall, 53.6 percent of the population aged two (2) years and above who attended or were still attending school were females. For persons that did not attend school, 51.7 percent were females.

4.1.1 Reading in any language

Reading ability was tested for population (2 years and over) that did not attend school. This population was asked if they could read a short sentence in any language. Out of the total 301,180 persons that did not attend school, 158,180 were "too young" and not asked if they could read.

The results revealed that 69.6 percent of persons who did not attend school could not read, whilst 19.5 percent could read with difficulty and 10.9 percent could read easily.

Across stratum, lack of reading ability is more predominant in rural areas (75.2 percent). Most of the population that never attended school and can read easily were in Urban Villages (16.8 percent).

4.2 Literacy rate

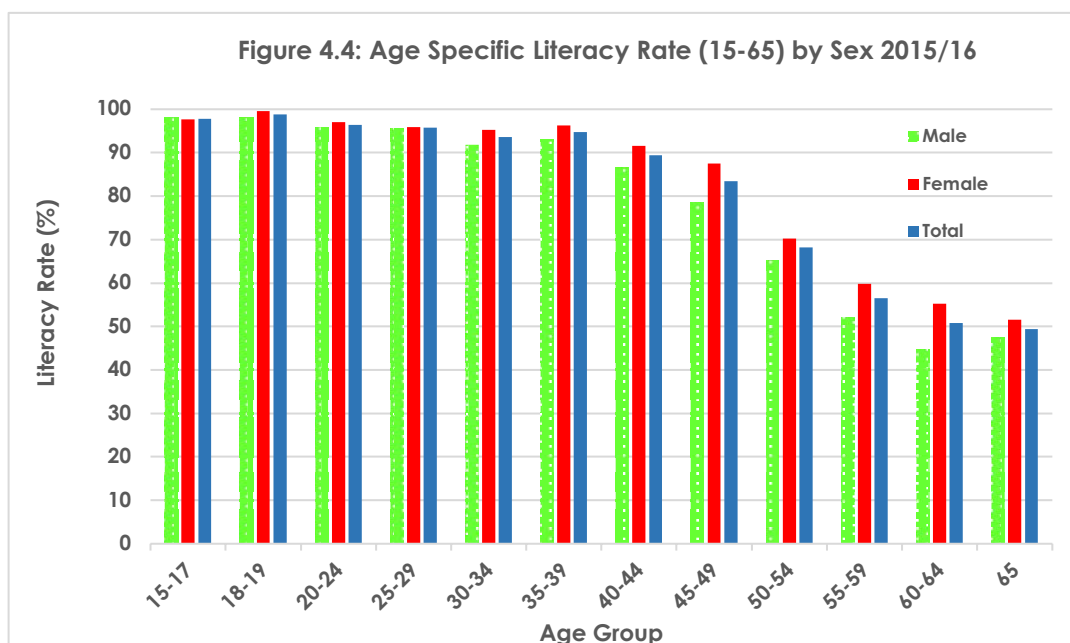

Literacy is the understanding, evaluating, using and engaging with written text to participate in society, to achieve one's goals, and to develop one's knowledge and potential.

Overall literacy rate for population aged 15-65 years was estimated at 88.7 percent. Female literacy rate was recorded at 89.8 percent while males recorded a rate of 87.4 percent.

Overall literacy rate for population aged 15-65 years from the 2014 Literacy Survey was at 90.0 percent as compared to the 83.2 percent for population 15-65+ years estimated from the 2009/10 Botswana Core Welfare Indicator Survey. The BMTHS did not apply tests to those who had never attended school within the above age group, while the 2014 Literacy survey did, which might explain the differences in the rates.

4.2.1 Literacy rate by Age group

Figure 4.4 below shows that the highest rate was recorded by the 18-19 years age group with 98.8 percent. The 60-65 years age group recorded 50.7 percent. For all the age groups (except 15-17), the rate for females was higher than that of males.

4.2.2 District Literacy rates

Kweneng west and Ngamiland west recorded the lowest literacy rate (10-70 years) with 73.8 percent each. Ghanzi district followed with a rate of 77.8 percent. Jwaneng recorded the highest rate with 94.7 percent.

There is an indication of some correlation between school attendance and poverty rate. The districts with low literacy rates are also the most affected by poverty. (Kweneng West recorded the highest poverty of 57.3 percent. Ngamiland West recorded 41.6 percent.)

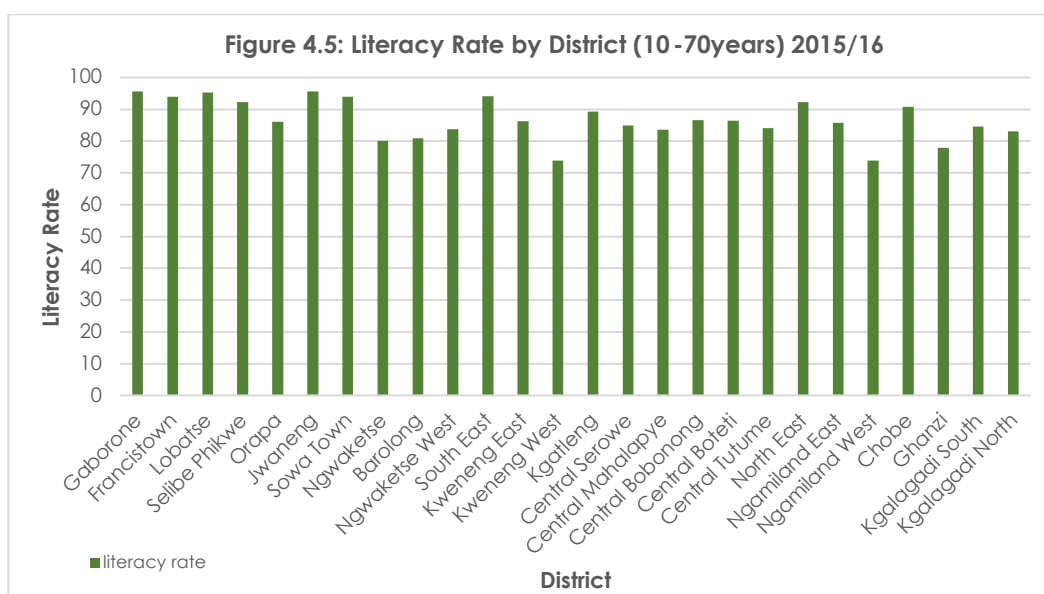

Table 4.2T: Literacy Rates by Age, Sex and Strata 2015/16

Stratum	10 - 70 years			12- 70 years			15 - 65 years		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Cities and Towns	94.3	95.0	94.6	95.3	95.3	95.3	95.2	95.5	95.4
Urban Villages	88.3	90.3	89.4	90.0	91.5	90.8	89.7	92.4	91.2
Rural Areas	76.7	80.2	78.5	78.6	80.9	79.8	78.4	81.3	79.9
Total	85.8	88.2	87.1	87.5	89.1	88.4	87.4	89.8	88.7

4.3 Training

Table E1 in the appendix presents training status for population aged 12 years and above by age group and sex. An estimated total of 1,121,597 (75.7 %) of the population have no training. Out of this, 55.2 percent were females. Age group 20-24 had the largest share of 'no training' with 12.1 percent, followed by age groups 12-14 and 25-29 with 10.85 and 10.4 percent respectively.

A total of 359,769 of the population 12 years and above had undergone some training. The majority of these (82.3 percent) reported to have completed training, 11.6 percent were still training and only 5.3 percent had discontinued their training. Age group 30-34 recorded 18.1 percent of population that had some training, followed by the age groups 25-29 and 35-39 with 17.1 and 15.0 percent respectively.

The survey has further shown that, the predominant training type was the Commercial, Clerical, Business and Public Administration with 29.7 percent. Other Craft, Trade Programmes recorded 12.6 percent of the total population with some training.

4.4 Population Still Attending School and Training

Out of 1,975,040 persons who are aged 2 years and above, 580,486 people were still attending school, which was 29.4. The school institutions which were attended started from Pre School to Tertiary level.

4.4.1 Estimated Population Still Attending School

Table 4.3T shows that 83.2 percent of the population still attending school was attending government schools, followed by private with 14.9 percent. Mission schools contributed 1.0 percent of the population that are still attending school. Male constitute 51.1 percent of the population who were still attending, while 49.1 percent were females.

Table 4.3T: Estimated Population Still Attending School by Type of School and Sex 2015/16

Kind of school	Sex			% Total
	Male	Female	Total	
Government	244,866	238,076	482,942	83.2
Private	39,508	47,238	86,746	14.9
Mission	3,270	2,797	6,066	1.0
Not Stated	2,526	1,285	3,811	0.7
Other (specify)	675	246	921	0.2
Total	290,844	289,642	580,486	100.0

4.4.2 Estimated Population still attending School by Level of Education

In terms of level of education, Primary School recorded the highest number of the people who were still attending school with 60.8 percent followed by Junior Secondary School and Pre-School with 18.5 percent and 9.2 percent respectively. Those who were attending Tertiary contributed 4.6 percent of the total population who were still attending school, see **Table 4.4T** below. 56.7 percent of the population still attending school was aged 2 to 11 years, this was consistent with total population aged 2 to 11 years which accounted for 25.0 percent of the total population aged 2 years and above. The age group which followed was 12 to 14 years with 20.5 percent, see **Table 1D** in Appendix.

Table 4.4T: Estimated Population still attending school by Level of Education and Age Group 2015/16

Age	2-11	12-14	15-17	18-19	20-24	25-29	Total	% Total
Pre School	53,212	-	-	-	-	-	53,212	9.2
Primary	275,52	71,814	4,83	353	141	-	352,656	60.8

% Total	56.7	20.5	14.2	3.4	4.9	0.3	100.0	

Most of the school attendees were concentrated in Urban Villages, as it is shown in [figure 4.6](#) and [Table 4.6T](#). The table shows that 46.6 percent of the population still attending school were in Urban Villages, followed by Rural Areas with 32.3 percent. Governments' schools were more prominent in the urban villages, as government mostly owned these schools, while Private schools were dominant in Cities and Towns. This was in line with population figures by Strata or Region, as 43.9 percent of population aged 2 years and above was in Urban Areas, as stated by [Table 4.5T](#) below.

Table 4.5T: Estimated Population Aged 2 years and above by Region and Sex 2015/16

Region	Sex			% Total
	Male	Female	Total	
Cities and Towns	197,338	225,590	422,928	21.4

Total Percentage	21.1	46.6	32.3	100.0

4.4.3 Population still Attending School by District

In terms of school attendance and District, Kweneng East recorded (13.8 percent) the highest number of population still attending school followed by Gaborone and Central Serowe District with 11.1 percent and 9.5 percent respectively. In terms of Population aged 2 years & above, by districts, Kweneng East and Gaborone constituted the highest total population of 14.4 percent and 11.7 percent respectively, see [Table 4.7T](#) below.

Table 4.7T: Estimated Population Aged 2 Years and above by District and Sex 2015/16

District	Sex			% Total
	Male	Female	Total	
Gaborone	109,735	121,554	231,289	11.7
Francistown	37,983	50,277	88,260	4.5

Ngamiland West	27,677	32,267	59,944	3.0
Chobe	10,985	12,125	23,110	1.2
Ghanzi	21,221	21,669	42,890	2.2
Kgalagadi South	12,974	10,867	23,840	1.2
Kgalagadi North	8,254	7,623	15,877	0.8
Total	923,590	1,051,450	1,975,040	100.0

4.5. Use of Computer/Laptop/Tablet

Figure 4.7 below shows that individuals who used a computer/laptop/tablet in the past 12 months amounted to 26.1 percent (515,967 persons) of the population aged 2 years and over whereas 66.4 percent (1,311,357 persons) reported to have not used computer or laptop or tablet.

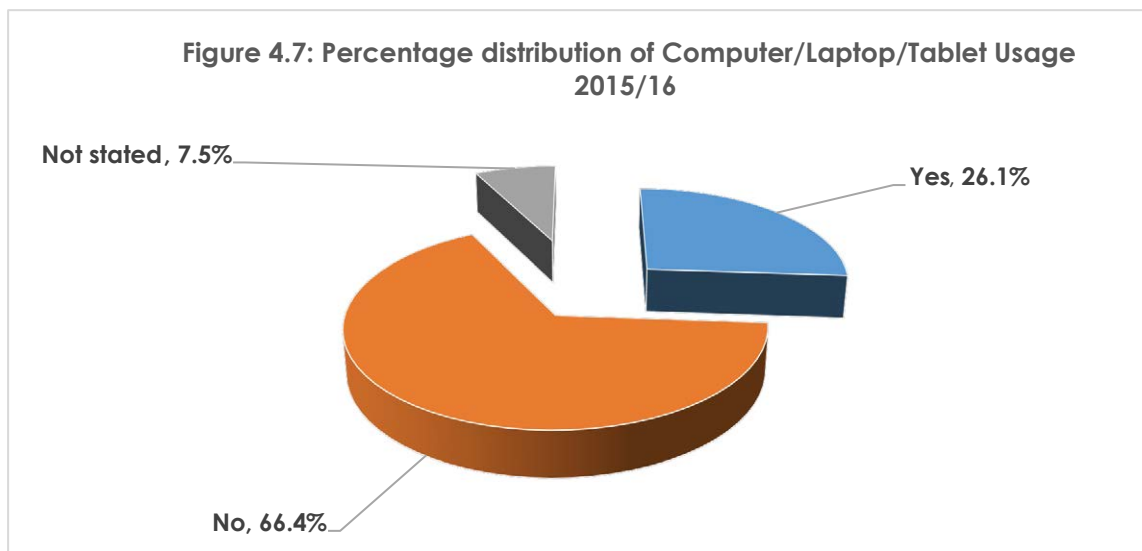

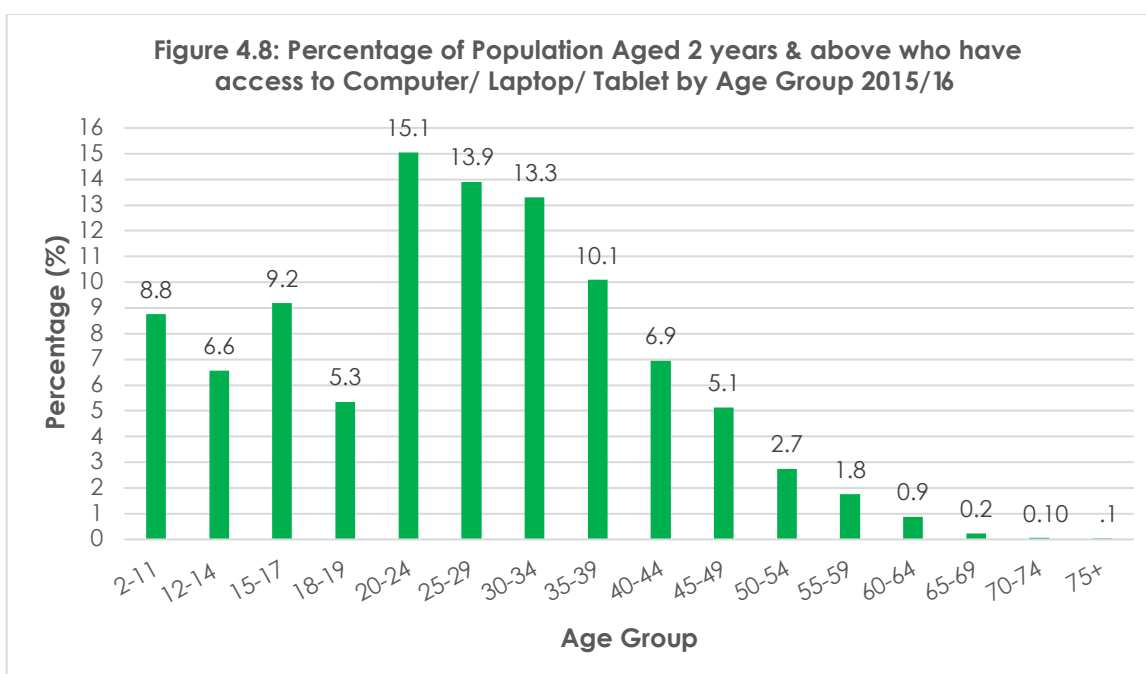

Figure 4.8 shows that the age group 20-24 had the highest percentage (15.1 percent) of computer/laptop/ tablet usage. This was the group with highest number in terms of total population eligible for training, aged 12 years & above, see Table E8 In Appendix. This was followed by the 25-29 year age group with 13.9 percent whilst the 30-34 year age group recorded 13.3 percent. From age group 55-59 to 75+, usage gradually goes down from 1.8 to 0.1 percent.

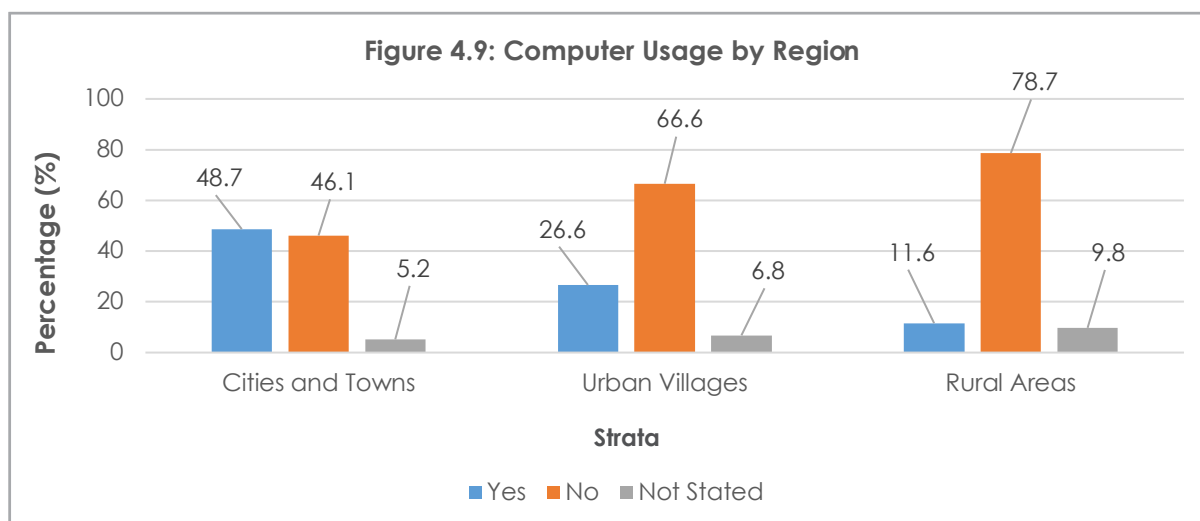

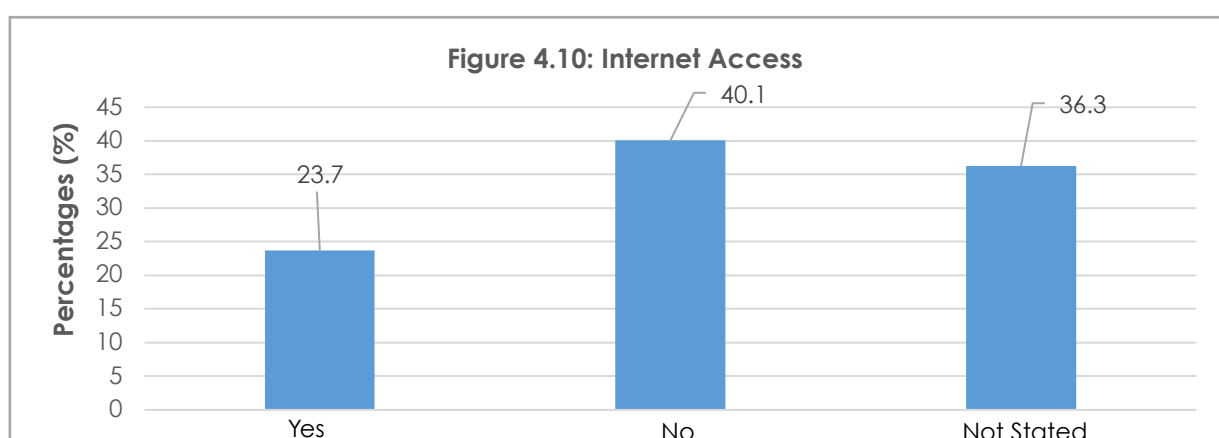

Figure 4.9 above indicates that 78.7 percent of people in rural areas had never used a computer/ laptop/ tablet. The proportion of those who had ever used a computer/ laptop/ tablet in Cities and Towns was recorded at 48.7 percent. Urban villages and rural areas recorded 26.6 and 11.6 percent of those who had ever used the same respectively. Gaborone recorded at 24.8 percent and Kweneng East recorded 14.5 percent.

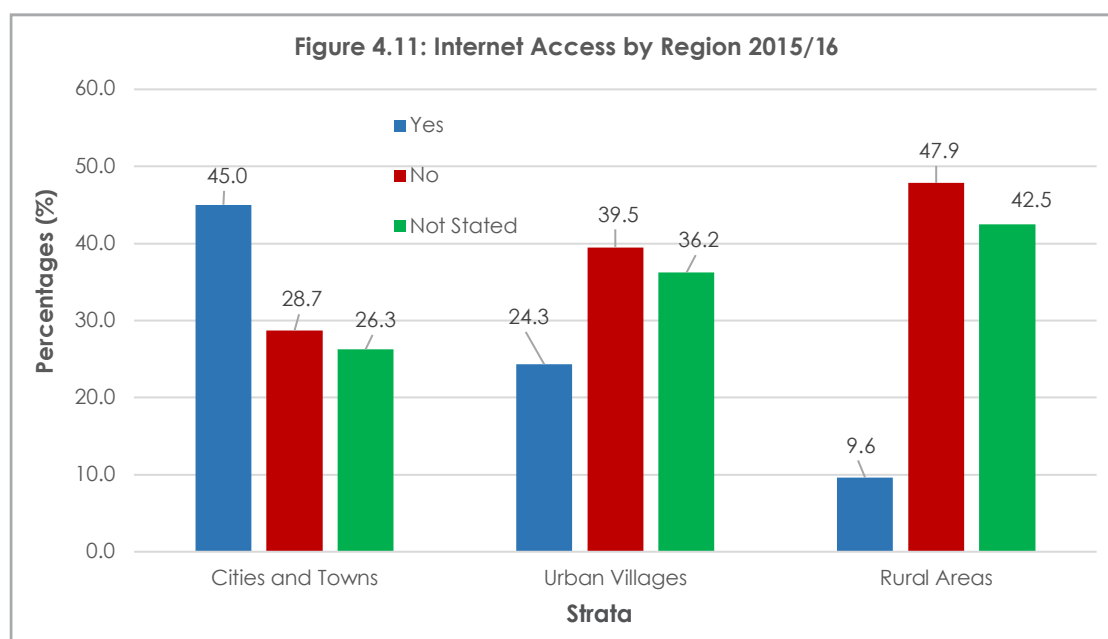

4.5.1 Frequency of usage of computer/ laptop/ tablet

Persons who had ever used a computer/ laptop/ tablet were asked how often they use them. More than half (59.1%) of those who reported to use computer/ laptop/ tablet used it at least once a day. Those who used computer/ laptop/ tablet at least once a week were estimated at 29.6 percent and usage at least once a month recorded 7.2 percent, see **Table E21** in **Appendix 3**.

4.6 Internet Access

From the population two years and above, only 23.7 percent reported having access to internet services. **Figure 4.11** below shows that 45.0 percent of persons in Cities and Towns reported having access to internet. The majority of internet was accessed from Home (33.7 percent), followed by access from Cell phone/Tablet and from Work with 32.1 and 20.6 percent respectively (**Table E31** from Appendix).

Internet usage At least a day recorded 70.3 percent of total usage. This was followed by usage At least a week and At least a month by 21.9 and 5.4 percent respectively. Internet access by age groups shows that access was more prominent amongst the groups 20-24 to 35-39 years with 19.0, 16.6, 15.5 and 11.5 percent respectively. (Table E30 in the appendix)

Chapter 5: Labour Force Activities

This module was administered to individuals aged 15 years and over, who, according to the International Labour Organisation (ILO) are a pool from which the labour force can be drawn. The definitions of employment/unemployment used adhered to the ILO standards.

5.1 Economic Activity

The Labour Force Activities provide the information on the economic activities individuals aged 15 years and above. The economic activities can be classified into three categories being the employed, unemployed and population not in the labour force. The employed and unemployed together form the labour force, which gives a measure of the number of people available and providing the supply of labour for the production of goods and services at a given point in time.

Information on Labour Force is important in terms of measuring the extent of the available and unused human resources for the purpose of monitoring human resources development planning. It also provides information on the relationship between employment, income and other social & economic characteristics for formulating and monitoring employment policies and programmes.

The information presented in this chapter covers current economic activities for population aged 15 years and above. These are persons who are currently employed, those who are actively seeking work and persons outside Labour Force (Economically Inactive Population). Included in the currently employed persons are those who did some work for at least one (1) hour in the past seven (7) days. The actively seeking work persons are those who, in the past 30 days, made effort(s) to search for work or start a business. Persons outside Labour Force are those who have stated that they were not working and also not seeking for work due to different reasons. Labour force comprises of individuals who are currently employed, and those unemployed and actively seeking work.

The choice of target population (15 years and above) is based on the International Labour Organisation (ILO) convention no. 138, which stipulates that minimum age for employment should not be less than 15 years.

Botswana's economic and education infrastructure has developed over the years, to an extent that there is compelling argument for the economic activity target population to cover persons aged 18 years and above, considering that persons below 18 years should be, or are still pursuing their education.

To adhere to international standards (ILO), and satisfy national planning needs, this chapter will provide, for some indicators like unemployment rate, indicators for both 15 & 18 years and above target populations. The analysis provides wider coverage on the target population of 15 years and above as it is the one used for international comparability and at the same time includes the 18 years and above.

5.1a The Employed Population

The employed comprise all persons of working age, who, during a specified brief period, such as one (1) week or one (1) day, were in the following categories:

- a) Paid employment (whether at work or with a job but not at work; or
- b) Self-employment (whether at work or with an enterprise but not at work)

The concept "at work" refers to persons who, during the reference period performed some work for wage or salary, in cash or in kind (for paid employment). Or persons who during the reference period performed some work for profit or family gain, in cash or in kind (for self-employment). For operational purposes, the notion "some work" may be interpreted as work for at least one hour.

5.1b The Unemployed Population

The unemployed persons or population can be described as all persons in the working age group, whom during a specified short reference period (7 days) were seeking and also being available for work. This is a category which covers persons who are ready to supply labour for the production of goods and services, but they are still seeking where to supply the labour.

Generally Unemployed persons are defined as working age persons who were:

1. Not employed in last 7 days / reference week
2. Carried out activities to seek employment in last 4 weeks / reference Month.
3. Available to start job/business in reference week OR in short period

5.1c Not Economically Active Population (NEAP) (Population Outside Labour Force)

The Economically Inactive Population comprises of all persons who were neither "employed" nor "unemployed" during the short reference period (7 days), used to measure "current activity". This population is split into four groups:

- Attendant at educational institutions;
- Retired;
- Engaged in family duties;
- Other economically inactive

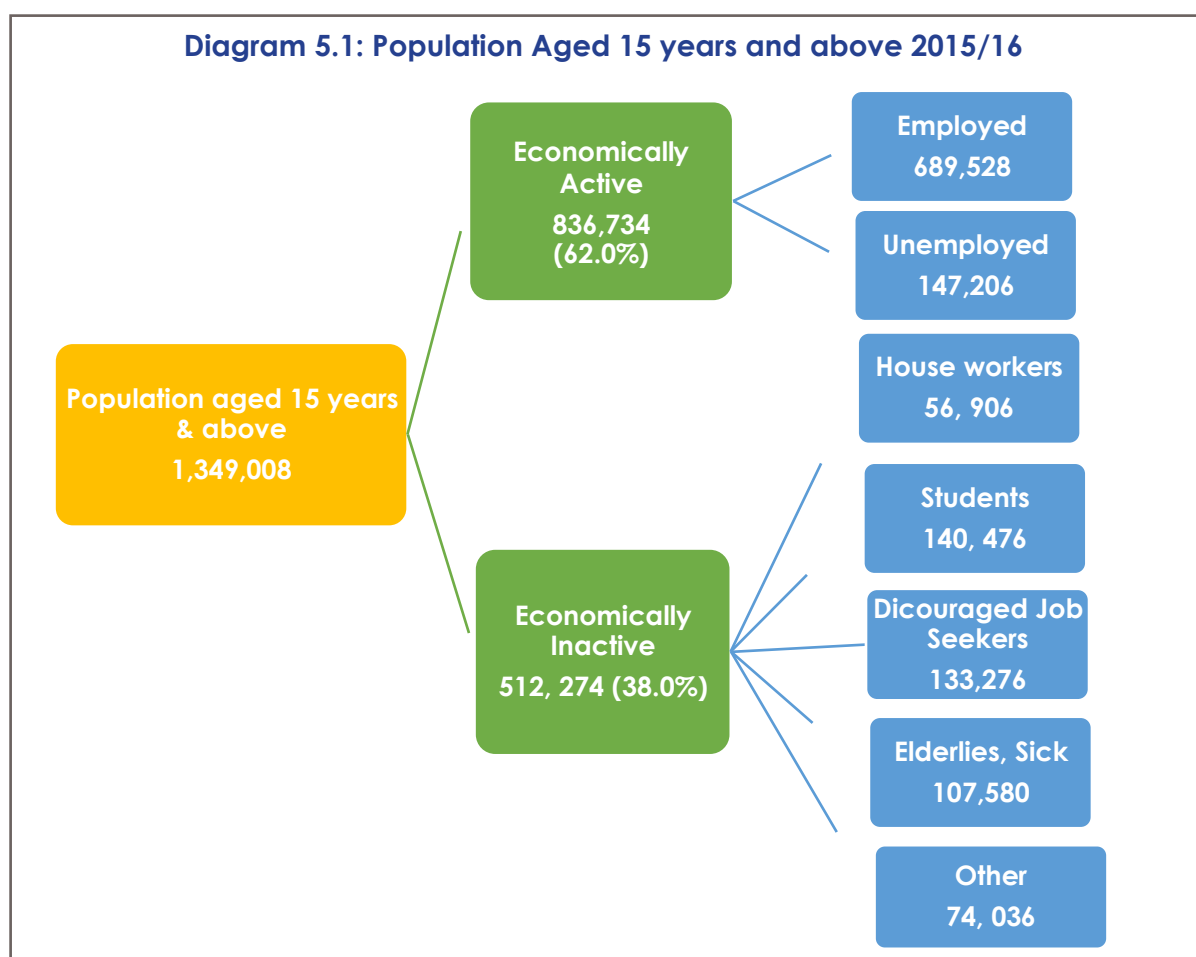

The Economically Inactive Population are not part of the supply of labour but are important as they are potential labour supply in the future.

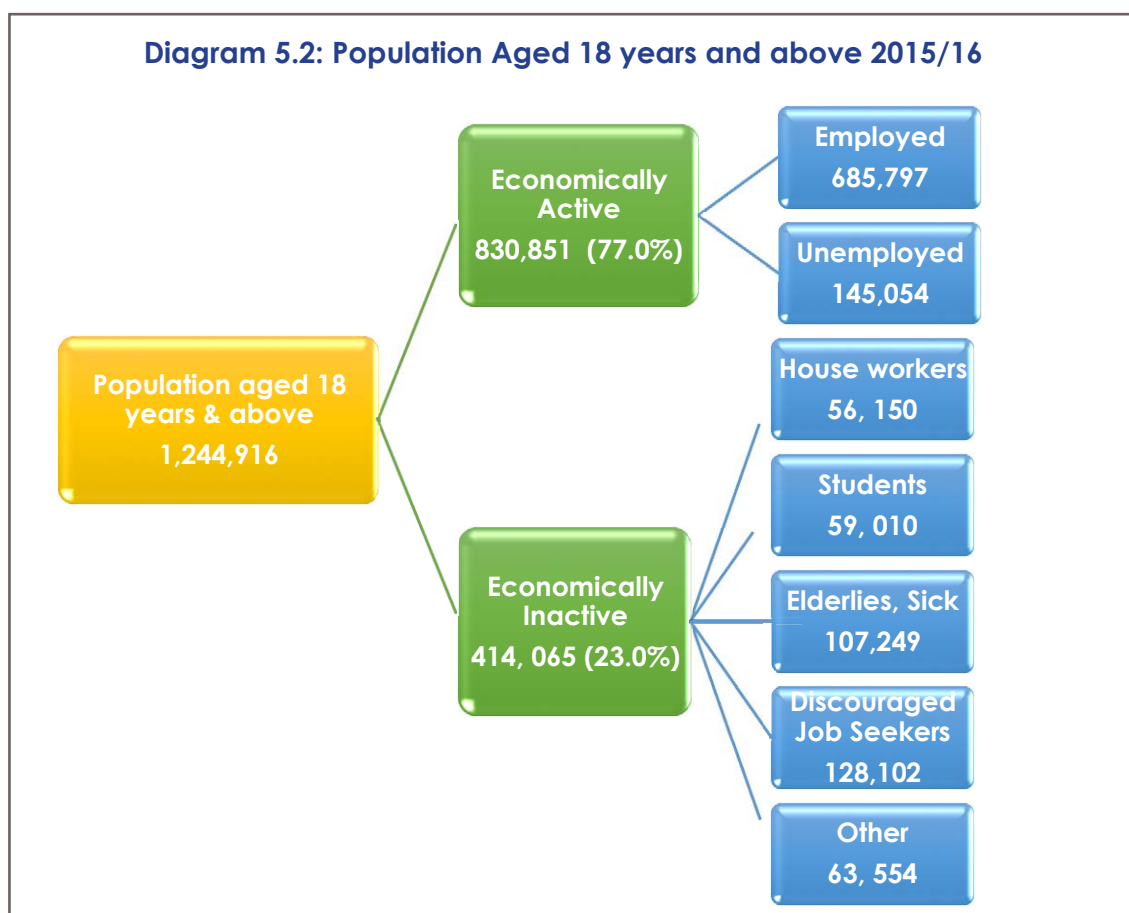

5.1d Population Aged 15 Years and Above

Diagram below present's information on the population 15 years and above divided into Population in Labour Force and Population Outside Labour Force. The Population in Labour Force comprise of persons aged 15 years and above who were either employed or job seekers in the past seven days prior to the interview date. This is the population which is referred to as the Economically Active. The Population Outside Labour Force includes all persons not classified as either employed or job seekers in the past seven days before the enumeration. These are students, retired persons, sick and homemakers and others not elsewhere classified.

The enumerated population of persons aged 15 years and above consisted of 836, 734 (62.0 percent) economically active and 512, 274 (38.0 percent) economically inactive population, when including Discouraged Job Seekers. Amongst the labour force (economically active) 689,528 (71.1 percent) were employed and 147, 206 (15.2 percent) were Actively Seeking Work.

According to the diagram below, out of the 512,274 Economically Inactive population, 27.4 percent (140,476) of them were students, followed by Discouraged Job Seekers with 26.0 percent (133,276) and those who stated that they were sick (107,580) with 21.0 percent.

5.1e Population Aged 18 years and Over

Diagram 5.2 above shows population aged 18 years and above. The total was estimated at 1, 244, 916, of which 830, 851 were economically active and 414, 065 economically inactive. The economically active consisted of 685, 797 employed individuals and 145, 054 unemployed.

5.1.1a Employment Population Ratio (EPR)

The Employment to Population Ratio, sometimes called Employment Rate, reflects the extent to which a country's population is growing in collaboration with creation of employment, that is, EPR is an important indicator of the ability of the economy to provide employment to its growing population. A decline in EPR may be considered as an indication of economic slowdown. **Figure 5.1a** shows Employment to Population Ratio by age group and sex. The figure shows that, the ratio for females was higher than their male counterparts from the early years up until the late years.

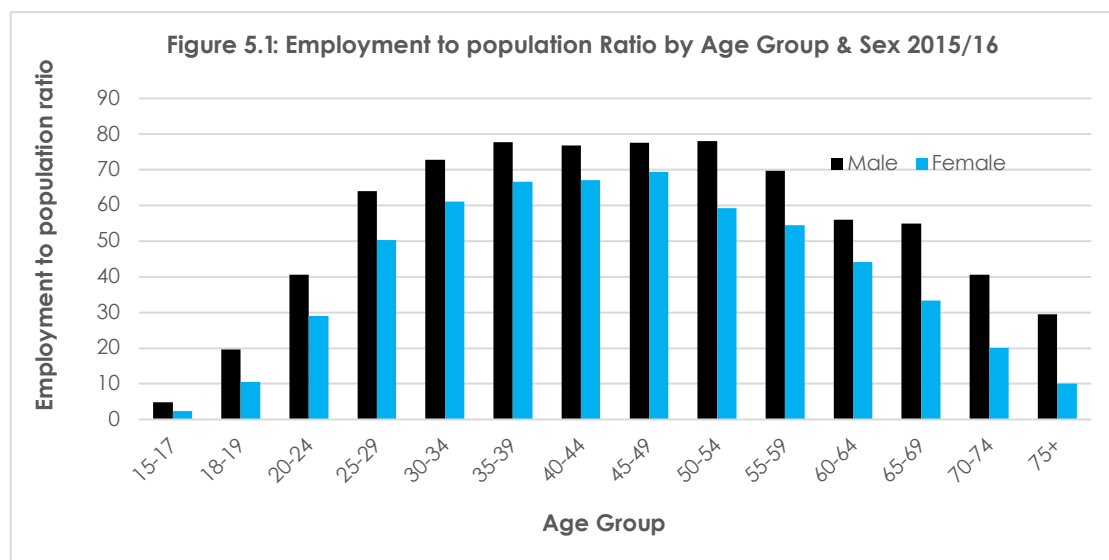

Table 5.1T: Employment to population ratio (15 years and above) 2015/16

Age Group	Population			Employed			Employment to population ratio		
	Male	Female	Total	Male	Female	Total	Male	Female	Total

5.1.1b Labour Force Participation Rates (LFPR)

Figure 5.2 and **Table 5.2T** shows the total labour force participation rate by age group between males and females from the 2015/16 BMTHS. The LFPR reflects the extent to which a country's working age group is economically active. For both sexes, participation rate in economic activity was high for young adults, (between 25-29 and 45-49 years) and then declined gradually as age increased. Participation rates for females were higher than their male counterparts from the onset.

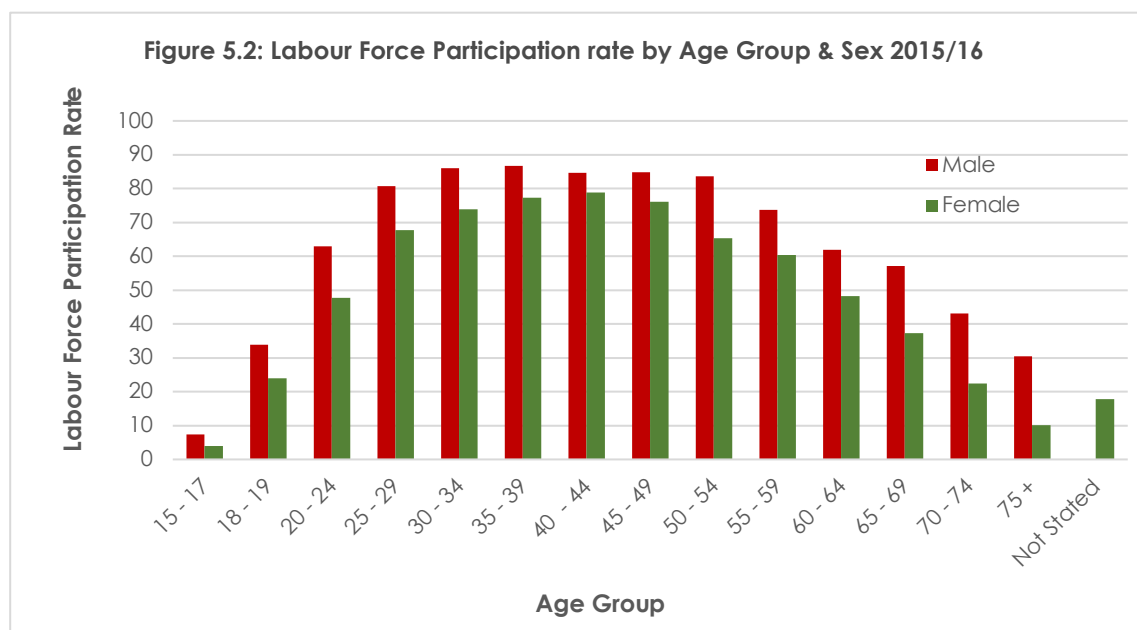

Table 5.2T: Labour Force Participation Rates by Age Group and Sex 2015/16

Age Group	Total Population			Economically Active			Participation rate %		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
15 - 17	52,058	52,035	104,093	3,841	2,043	5,884	7.4	3.9	5.7

5.1.2 Currently Employed by District

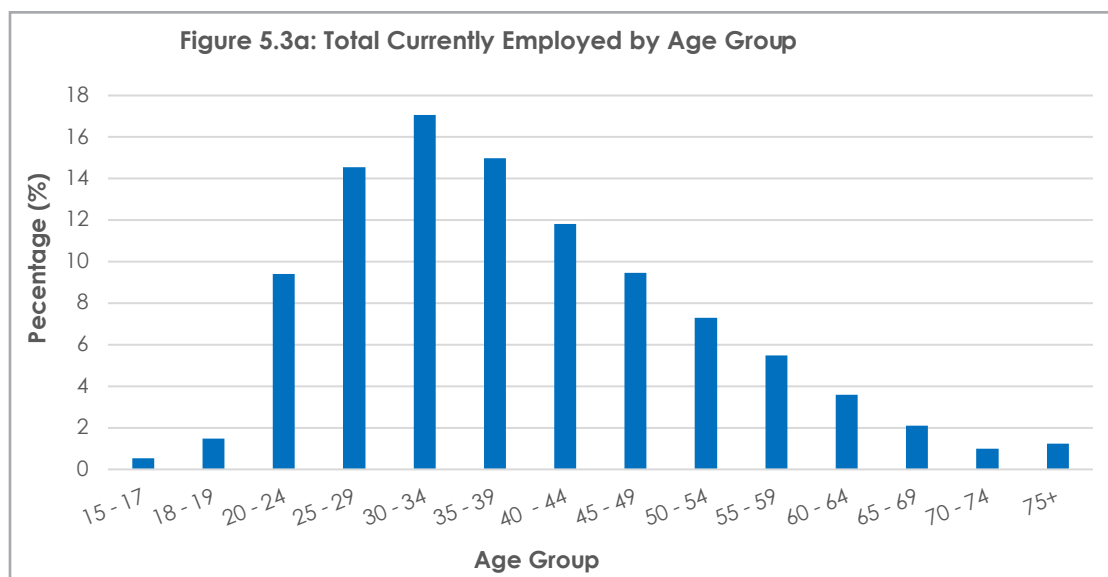

Employment by districts shows that Gaborone was the leading district in terms of number of employees with 16.0 percent (110,631 persons) followed by Kweneng East and Central Serowe with 14.7 percent (101,696 persons) and 7.7 percent (52,813 persons) respectively.

Table 5.3T: Total Currently Employed by District and Sex 2015/16

District	Sex			% Total
	Male	Female	Total

5.1.3a Currently Employed by Age Group 15 years and above

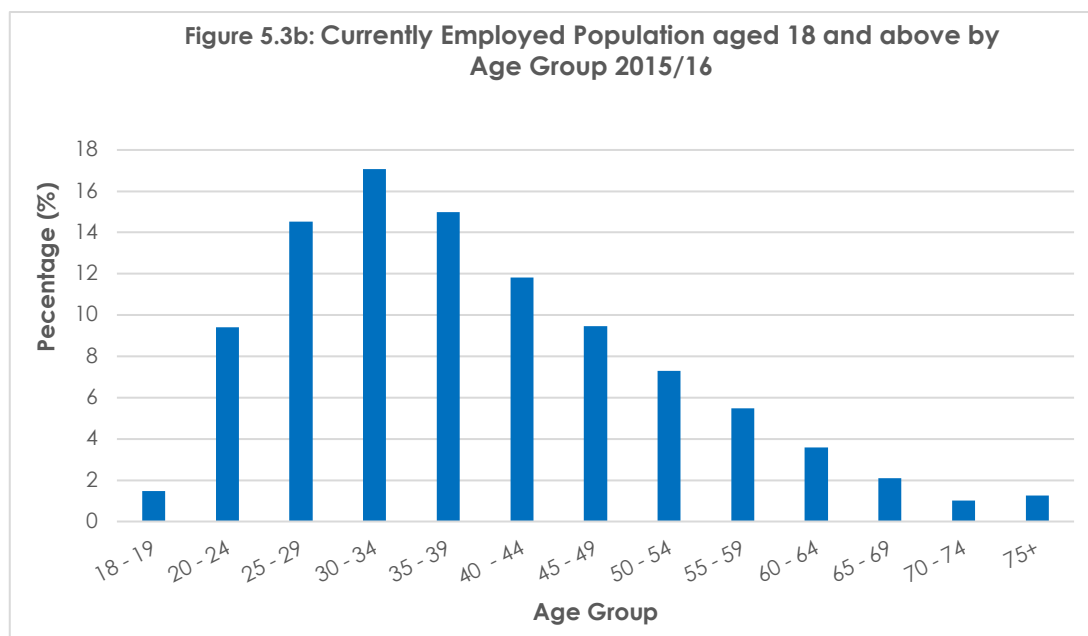

Figure 5.3 displays currently employed population by age group. Age group 30 – 34 constituted the highest proportion of employment with 17.1 percent followed by age group 35 – 39 with 15.0 percent and 25 – 29 years with 14.5 percent.

5.1.3b Currently Employed by Age Group 18 years and above

Figure 5.3b below and **Table U9b** in Appendix present aggregated and disaggregated employment for population aged 18 years and above. Overall, 685,797 individuals were in employment during the survey period, translating to 55.1 percent employment to population ratio.

Of the total 685, 797 employed, 346, 470 (50.5 percent) were males and 339, 328 (49.5 percent) were females. **Table 1**.

5.1.4 Currently Employed by Occupation

The most commonly reported occupations were Elementary and Service & Sales workers. Elementary occupations accounted for 26.5 percent (182,616) of the total employed followed by service/ sales workers with 20.7 percent (142,089).

Comparing occupations by sex, males tend to exceed females in most categories except in occupations such as Clerical Support Services, Elementary and Service/Sales Workers where female recorded highest percentages. (See **Figure 5.4** and **Table 5.4T** below).

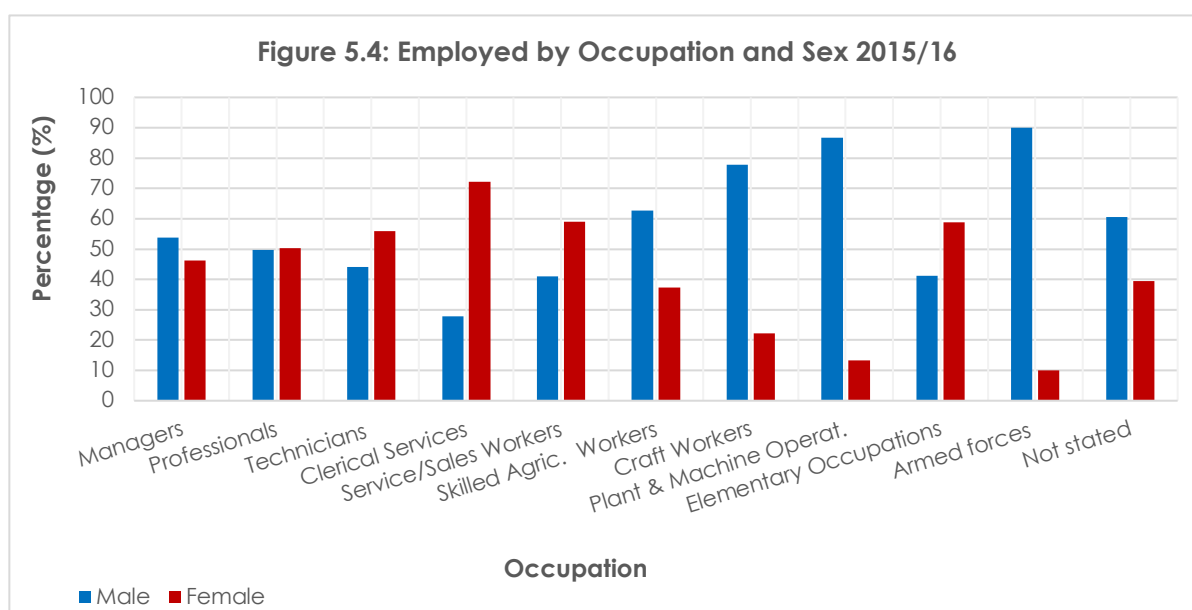

Table 5.4T: Total Currently Employed by Occupation and Sex

Occupation	Male	Female	Total	Male	Female	Overall Total

5.1.5 Currently Employed by Industry

Industry refers to the place of work (where the person work). It includes the main product, service or type of activity performed or offered. A total of 689,528 reported to be currently employed, of which 348, 993 (50.6 percent) were males while 340,535 (49.4 percent) were females.

Table 5.7T shows percentage distribution of the currently employed by industry and sex. Looking at industries as employers, Public Administration & Defence, Compulsory Social security seem to be the largest employer with 20.1 percent, followed by Wholesale & Retail Trade, Repair of Motor Vehicles and Motor Cycles with 14.1 percent while Agriculture, Forestry and Fishing is the third largest contributing 11.6 percent of the total employment. Activities of Extraterritorial organisations is the least employer.

Males dominate females in Agriculture, Forestry and Fishing (14.2 percent) whereas females dominate in Public Administration and Wholesale & Retail (24.9 percent & 16.5 percent respectively). Other industries such as Information and Communication had a slightest difference where males stood at 0.9 percent while females were at 0.8 percent, the difference of 0.1 percent (**Table 5.7T**).

From **Table M1**, it can be concluded that the majority of persons (283,421) were employed in Urban Villages (41.1 percent), followed by Rural Areas with 31 percent (214,028 persons) and Cities & Towns with 27.9 percent (192,079 persons) of the total employed. Agriculture, Forestry and Fishing dominated in Rural Areas contributing 27.2 percent of the employed.

5.1.7 Currently Employed by Education Level

The employed population by Education Level shows that those who completed Junior Secondary school contributed 27.8 percent, followed by University/College with 20.1 percent while those who completed Primary recorded 18.0 percent (See [Table 5.10T](#)).

Figure 5.6 shows that 62.7 percent of the employed males never attended school as compared to 37.3 percent of the females.

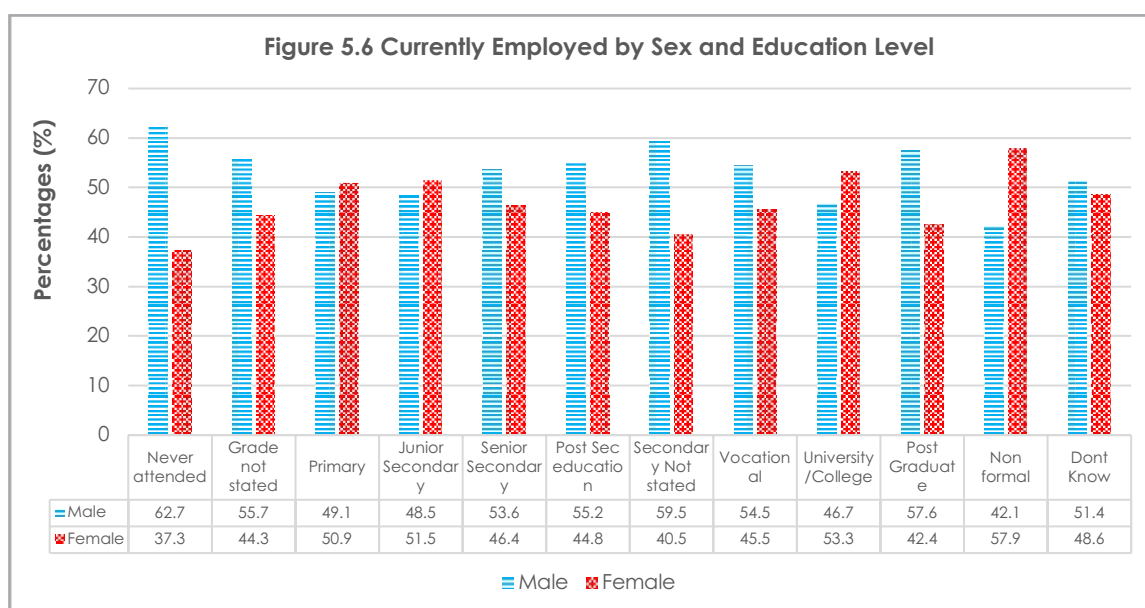

Table 5.10T: Percentage of Currently Employed by Employer Category and Sex

Education Level	Male	Female	Total	Male	Female	Overall Total
Never attended	33240	19801	53041	62.7	37.3	7.7

5.1.8 Currently Employed by Training

People without training contributed the largest proportion of the total employment with 438,440 persons (63.6 percent) who are mostly working in elementary occupations. The second largest is commercial, clerical & business related training with 73,502 (10.7 percent) while the least is fine & applied arts with 572 (0.08 percent), **Table M17** in the appendix and **Table 5.11T**.

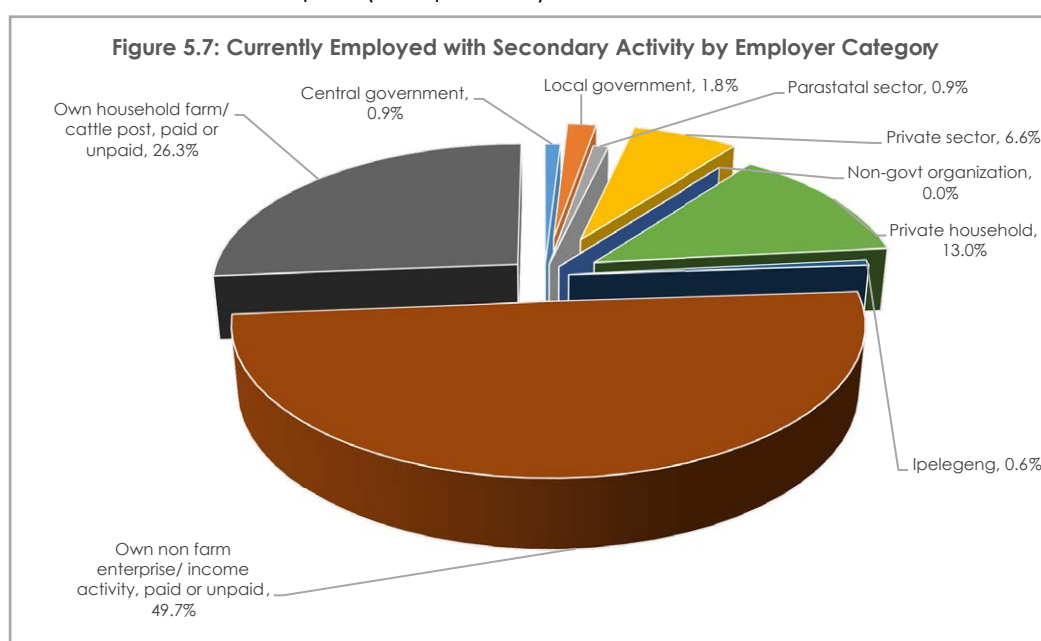

Table 5.11T: Total Currently Employed by Training and Sex

Training	Male		Female		All Total

Other Degrees	5,457	1.6	3,691	1.1	9,148	1.3
Total	348,993	100.0	340,535	100.0	689,528	100.0

5.1.9 Secondary Activity

A total of 27,818 persons reported to have a secondary activity, of which 16,322 (58.7 percent) were males while 11,496 were females (41.3 percent). Majority (8,616) of these people had as secondary activity in the Agricultural industry (31 percent) of the total, and were in rural areas (**Table S 4** in the appendix).

According to **Figure 5.7** self-employment in own non-farm enterprise contributed the highest percentage of Secondary Activity by employer category (49.7 percent) followed by those working in own household farm/ cattle post (26.3 percent).

5.1.10 Employed People from Poor Household (Working Poor)

The working poor are the working or employed people who are from households which fall below poverty line. The wages and their income is not sufficient to afford basic needs, so as to lift their households above poverty line. The wages these people are getting may be above poverty line but not being sufficient to sustain the livelihood of their households.

5.1.10.1 Total Employed People from Poor Household

From the total of 689,528 of the employed population, 8.8 percent (60,727 persons) were the employed from the poor households of which 51.6 percent were females while 48.4 percent were males. Rural Areas constituted the highest proportion with 48.0 percent, followed by Urban Areas with 33.0 percent while Cities & Towns was the least with 19.0 percent. See **Table 5.12T** & **Figure 5.8**.

Table EP2 in the appendix shows that majority of the poor are working in Elementary Occupations (40.1 percent), followed by those in Service/Sales Workers with 23.3 percent and those in Skilled Agriculture with 13.3 percent. Also see **figure 5.9**.

Figure 5.8: Percentage Distribution of Total Employed from Poor Households by Strata

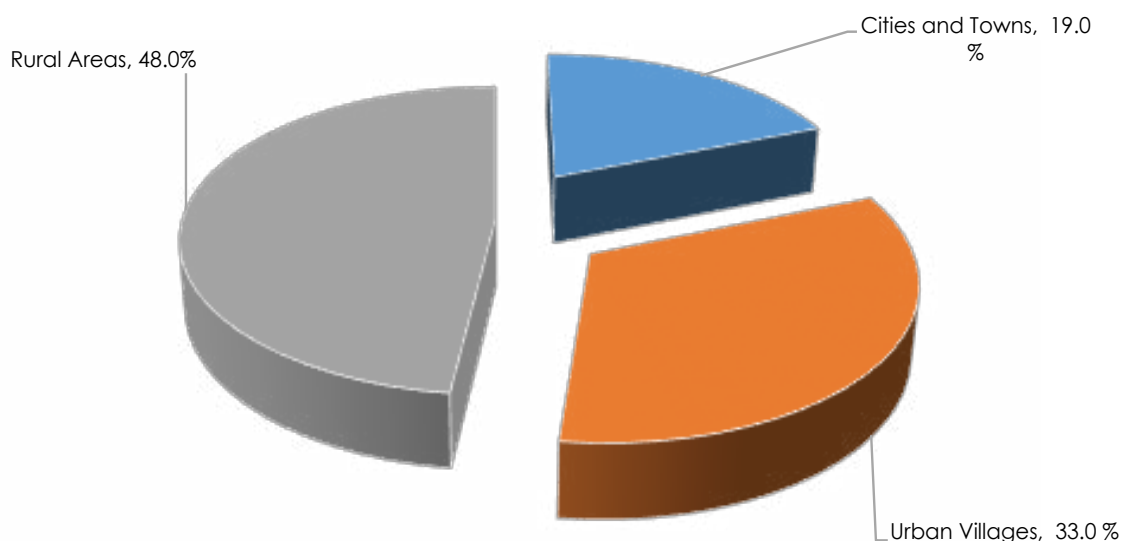

Table 5.12 T: Total Working People from Poor Household by Strata and Sex

Strata	Count			Percentage (%)		
	Male	Female	Total	Male	Female	Total
Cities and Towns	5,292	6,246	11,538	45.9	54.1	19.0
Urban Villages	9,195	10,842	20,037	45.9	54.1	33.0
Rural Areas	14,933	14,219	29,151	51.2	48.8	48.0
Total	29,420	31,307	60,727	48.4	51.6	100.0

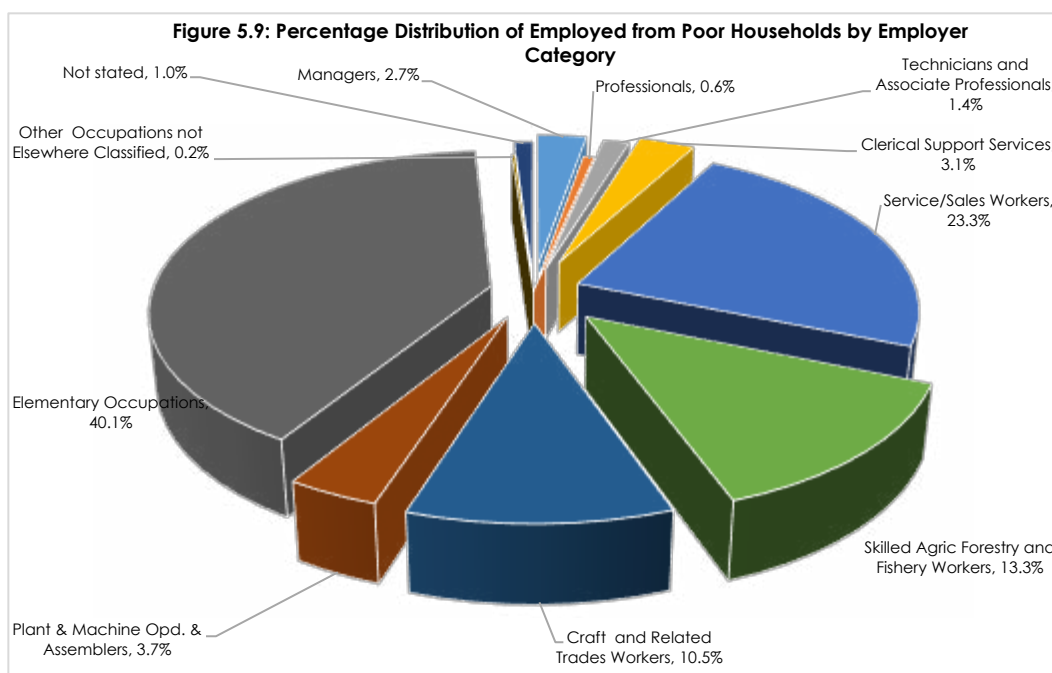

Table EP1 in the Appendix shows that the majority of working people from poor households, are concentrated in age group 30 – 34 constituting the highest proportion of 19.0 percent, followed by age group 25 – 29 and 20 - 24 with 16.5 percent and 11.4 percent respectively.

5.1.10.2 Employed Heads from Poor Households

From the estimated total of 60,727 working people from the poor households, 23,513 (38.7 percent) persons were the working heads from Poor households, of which 11,912 (50.7 percent) were males while 11,601 (49.3 percent) were females.

Figure 5.10 below shows that majority the working heads from poor households completed Primary Education (31.7 percent), 24.8 percent never attended school while 21.3 percent were Junior Secondary School leavers.

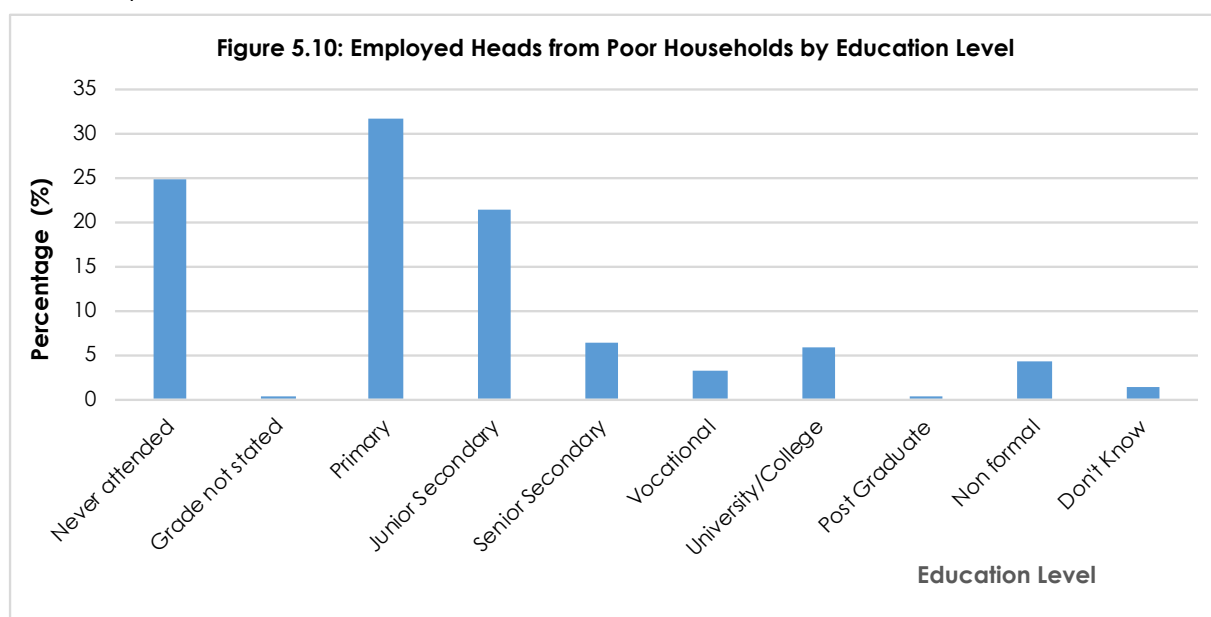

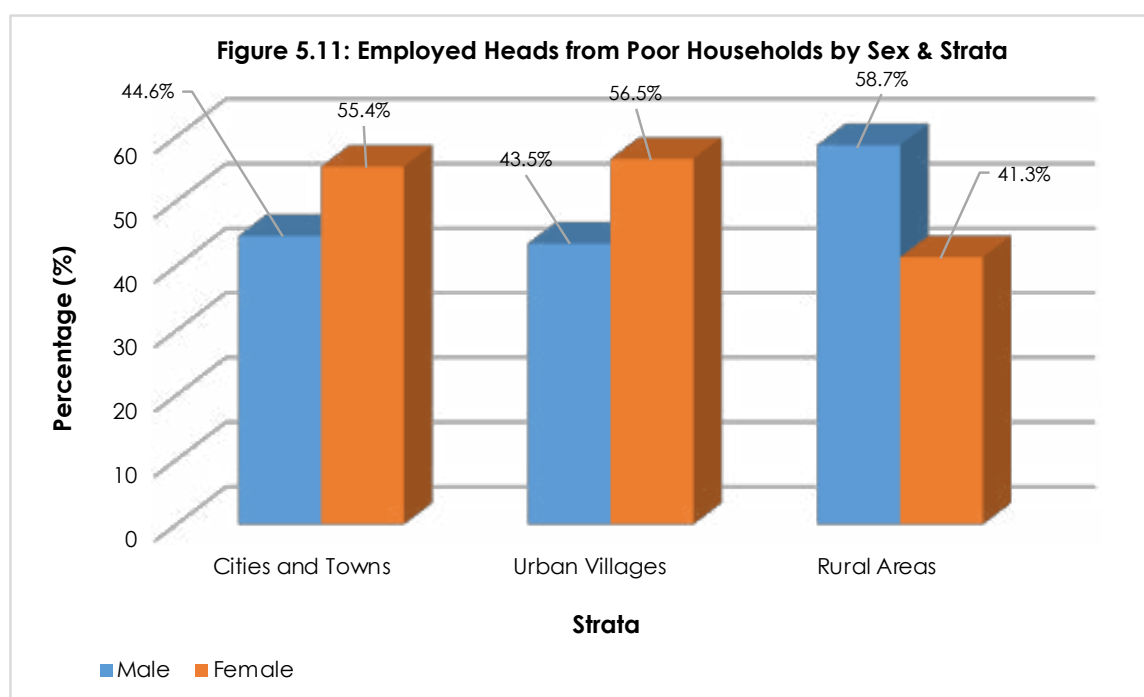

Table 5.13T and **Figure 5.11** below shows that majority of working poor heads of households are in Rural Areas (45.2 percent) followed by those in Urban Areas with 27.6 percent while those in Cities & Towns constituted only 27.1 percent. Comparing within the Strata, in both Urban Areas and Cities & Towns females dominated males except in Rural areas where males recorded 58.7 percent as compared to 41.3 percent of females.

Table 5.13T: Working Heads from Poor Household by Sex and Strata

Strata	Count			Percentage (%)		
	Male	Female	Total	Male	Female	Total
Cities and Towns	2849	3,533	6,382	44.6	55.4	27.1
Urban Villages	2,825	3,676	6,501	43.5	56.5	27.6
Rural Areas	6,238	4,392	10,630	58.7	41.3	45.2
Total	11,912	11,601	23,513	50.7	49.3	100.0

5.2 WAGE EMPLOYMENT

Total Wage Employment includes Population who have stated that they were working for paid Employment. There suppose to be remuneration in wage Employment because of the Employee tag. Wage Employment excludes the people who have stated that they are engaged in Self Employment Activities.

Wage employment includes any salaried or paid job under contract (written or not) to another person, organization or enterprise in both the formal and informal economy. A total of 510,953 was recorded as wage earners of which 254,253 persons were males while 256,700 were females.

5. 2.1 Wage Employment by District

Table Y5 in the appendix presents information on Wage Employment by District and Sex. It shows that most of the wage employed are concentrated in Gaborone, constituting 17.3 percent followed by Kweneng East and Central Serowe with 14.6 percent and 7.2 percent respectively. Females accounted for 51.2 percent of the total wage employment, while males contributed 49.8 percent.

5. 2.2 Estimated Monthly Basic Salaries by Region

Table 5.14T shows the distribution of range of money by Region, most of the employees are concentrated on the 1001 to 2000 range with 25.7 percent, followed by 501 to 1000 range constituting 24.9 percent. The Table also shows that 42.5 percent of the waged employment were prominent in urban villages, followed by Cities & Town with 30.4 percent.

Table 5.14T: Estimated Monthly Basic Salaries or Wages by Range in Pula and Region 2015/16

Monthly Wage	Cities and Towns	Urban Villages	Rural Areas	Total	% Total
=<500	2,342	9,739	15,144	27,226	5.3
501-1000	20,293	46,460	60,654	127,407	24.9

Wage earners by Industry in **Table Y9** in the appendix, shows that Public Administration was the main employer of the wage employees, constituting 27.0 percent of the total wage employees, followed by Private household and Wholesale & Retail Trade recording 12.6 percent and 10.5 percent respectively.

5. 2.3 Estimated Monthly Value of Other Allowances

Table 5.16T presents the estimated monthly value of other allowance given to the waged employees. 77 percent of the employees do not get any allowance. The employees who have allowance, 6.0 percent of them fell in the range of less or equal 500 pula, followed by range of 1001 to 2000, recording 1.3 percent.

Table 5.16T: Estimated Monthly Value of Other Allowances in Range of Pula and Sex 2015/16

Allowance	Sex			% Total
	Male	Female	Total	
=<500	13,652	16,923	30,574	6.0

5.2.5 Formal and Informal Employment

Formal jobs include employment which is liable for taxation, pension or gratuity, paid leave, maternity leave, allowances, medical services, etc. Employees under formal employment are supposed to be protected under various schemes like minimum wages act, factories act etc. Workers are supposed to work fixed number of hours, if they work more hours they supposed to be paid more or given off days.

Informal jobs include employment which is not subject to national labour legislation, income taxation, social protection or entitlement to other employment benefits (like advance notice of dismissal, severance pay, paid annual or sick leave, etc. Most of informal jobs consists of casual jobs, example is the lpelegeng employees.

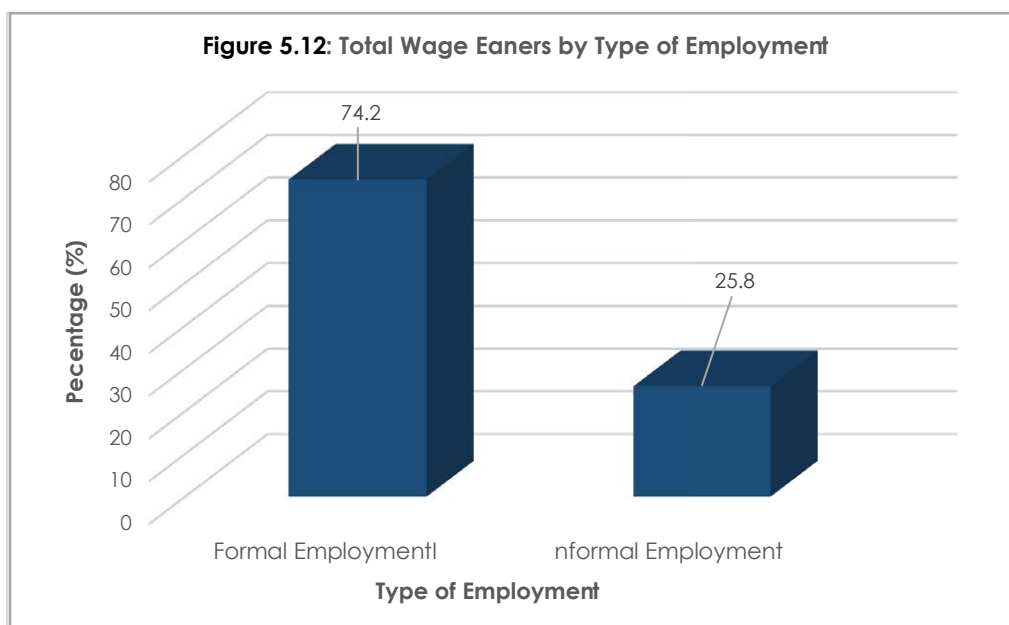

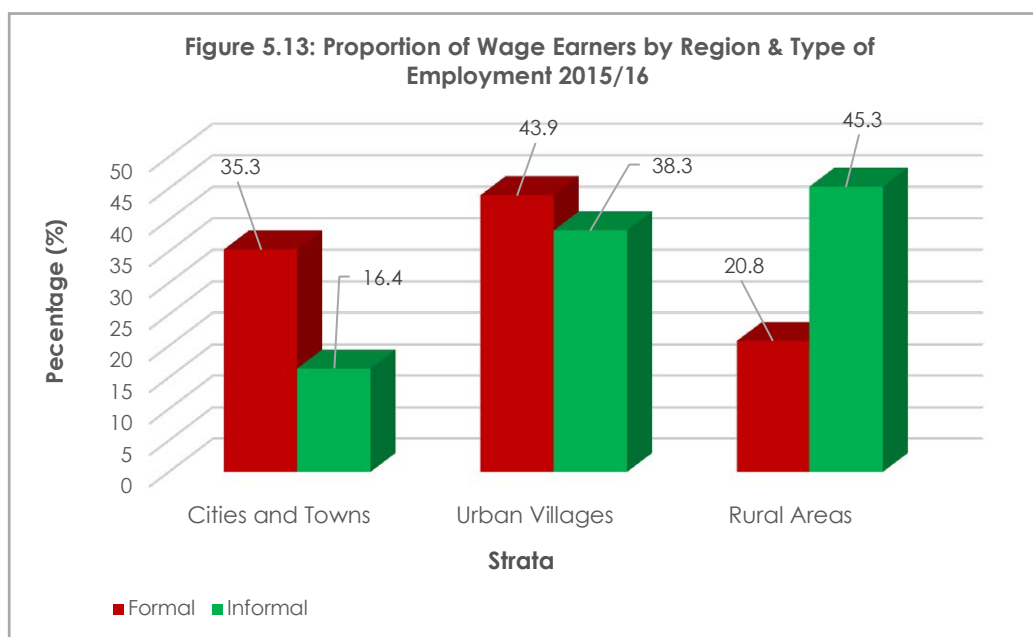

Figure 5.12 above shows the proportion of wage employees by type of employment. High proportion of wage earners are in formal employment (74.2 percent) while only 25.8 percent are in the informal employment. Rural Areas constituted the largest proportion of informal employment as compared to other areas, recording 45.3 percent of the total informal employment (**Figure 5.13**).

5.2.6 Average Earnings

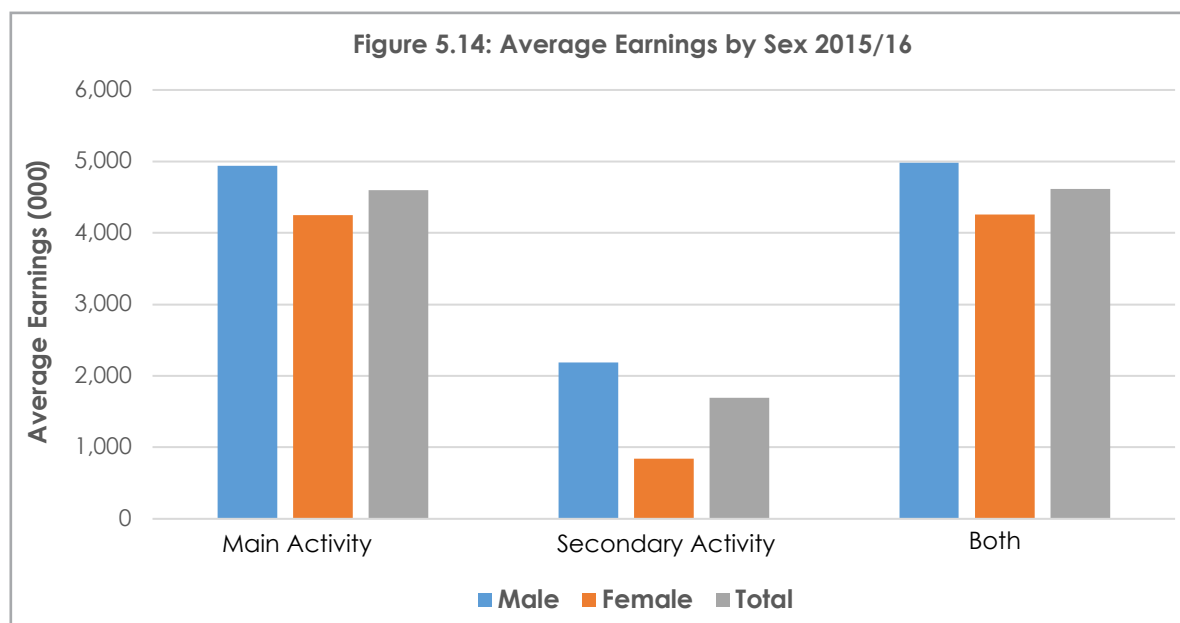

This section presents the estimated average cash earning for wage earners by citizenship (both Citizens and Non – citizens). Average earnings for citizens was estimated at P4, 501, P6, 538 for non-citizen and P4, 594 for all employees in their main activity.

For secondary activity estimated average earnings were P1, 681 for Citizens, p1, 800 for non-citizens and p1, 693 for all employees.

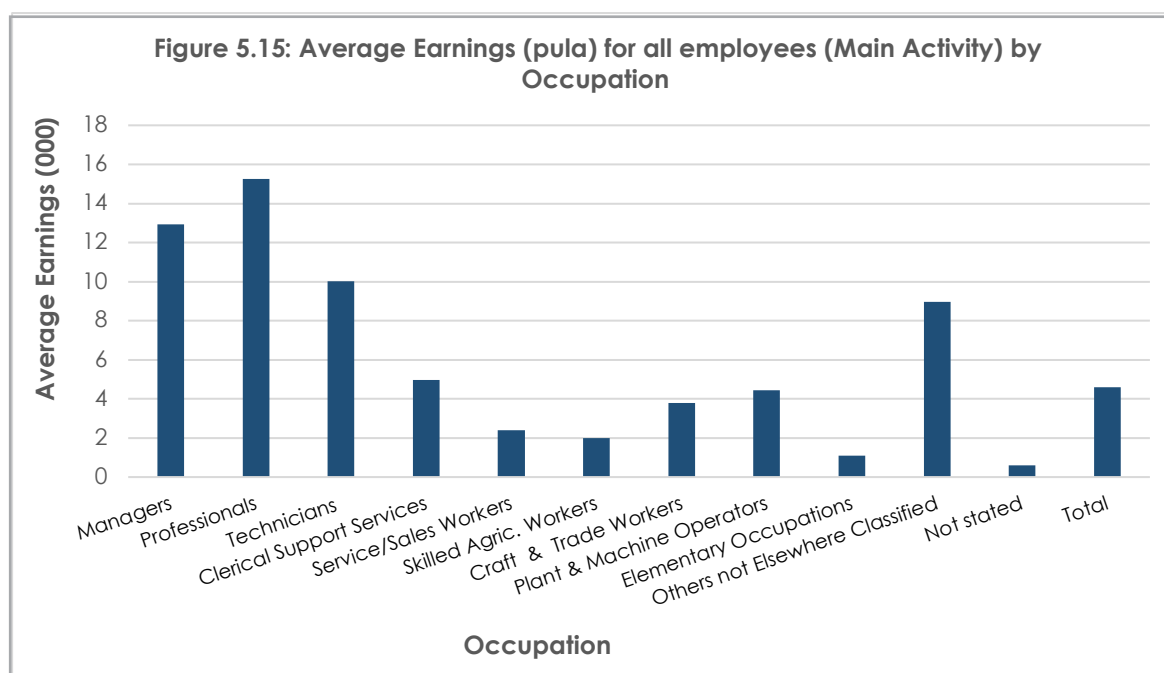

Table 5.18T: Average Earnings for all Wage Earners by Sex 2015/16

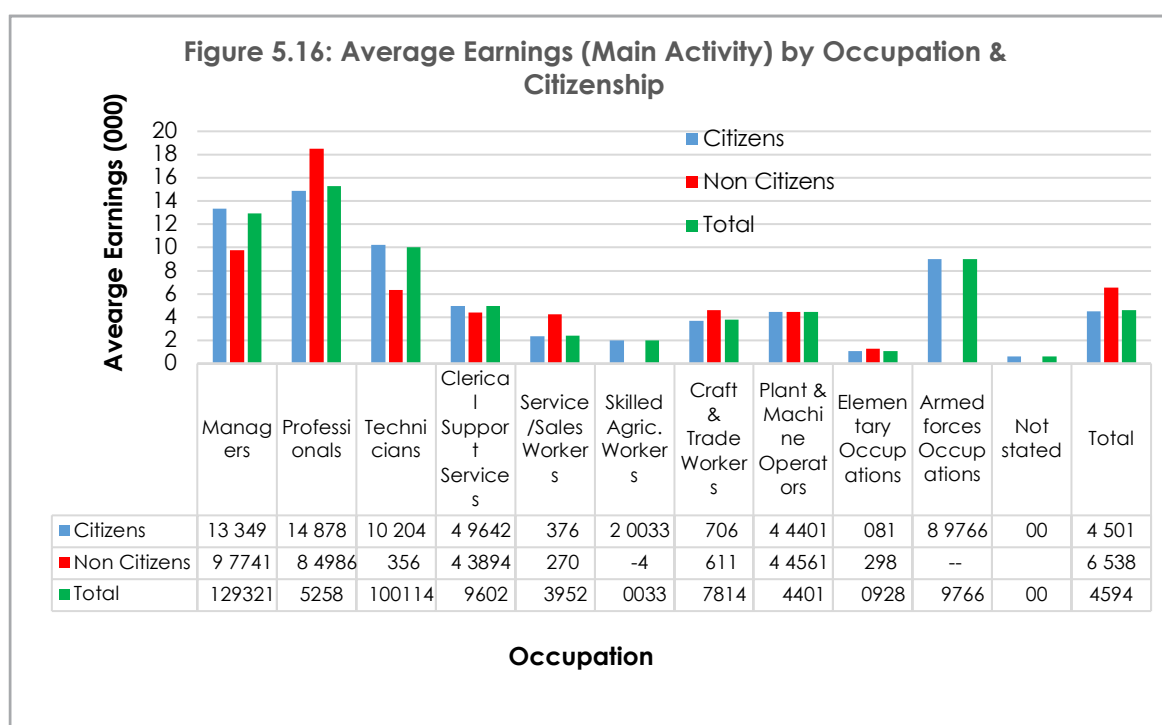

Sex	Main Activity	Secondary Activity	Both (Main plus Secondary)
Male	4,943	2,187	4,979
Female	4,248	844	4,256
Total	4,594	1,693	4,616

Figure 5.14 presents average earnings by sex. The chart shows that in both main and secondary activity males dominated females. For main activity males recorded P4, 943 and for female it was P4, 248.

The **graph 5.15** below shows that average earnings (in main activity) for professionals were the highest.

5.2.7 Salary Ranges

Table Y1 in the appendix shows that majority of people had salaries ranging between P501 - P1000 (25.7 percent) and are mostly in Rural Areas. Category P1001 – P2000 and P2001 – P4000 followed with 25.1 percent and 16.0 percent respectively.

5.3 Currently Unemployed

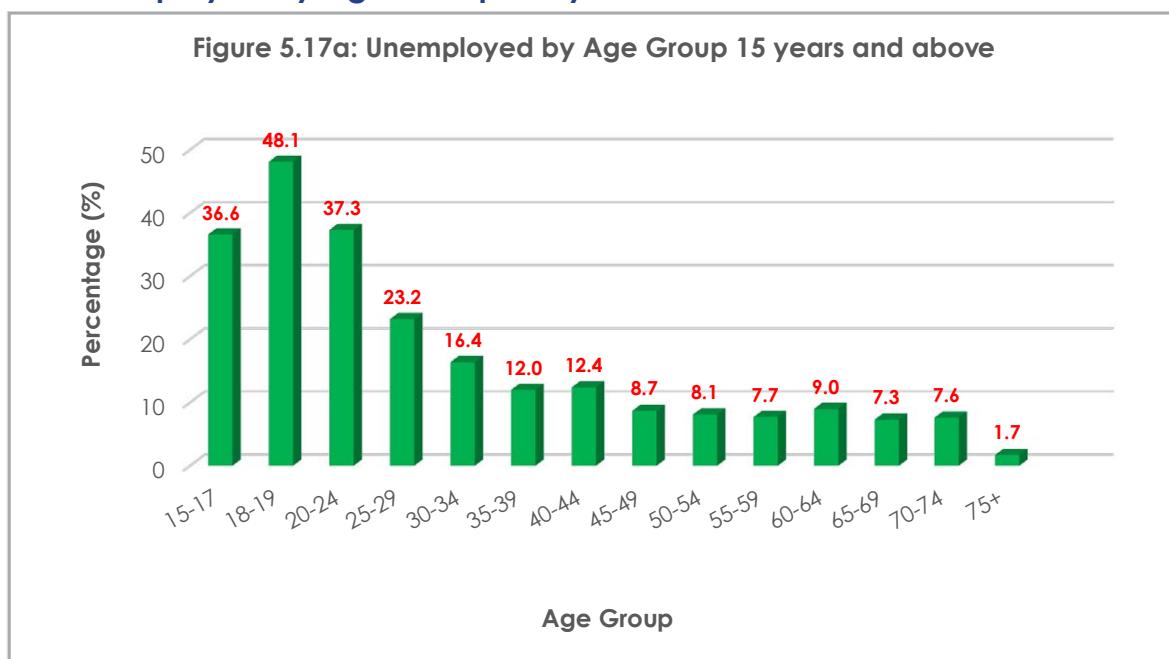

Unemployed persons are persons who did not do some work in the reference period for payment (either in cash or in kind), profit or family gain. The unemployed people are those who have stated that they have been actively seeking work in the past thirty days and are available to start work. Individuals who were temporarily absent from their employment activities and were definitely going to return to them are excluded.

Discouraged job seekers are persons who did not do some work in the reference period and are available to work but were not actively seeking employment in the reference period. These persons usually stop looking for work because they have given up as they had no success in finding a job, hence the term “discouraged”.

The 2015/16 Botswana Multi Topic Household Survey estimated total unemployed population at 280,482. Of these, 147,206 (52.5 percent) were actively seeking work and 133,276 were discouraged job seekers (47.5 percent).

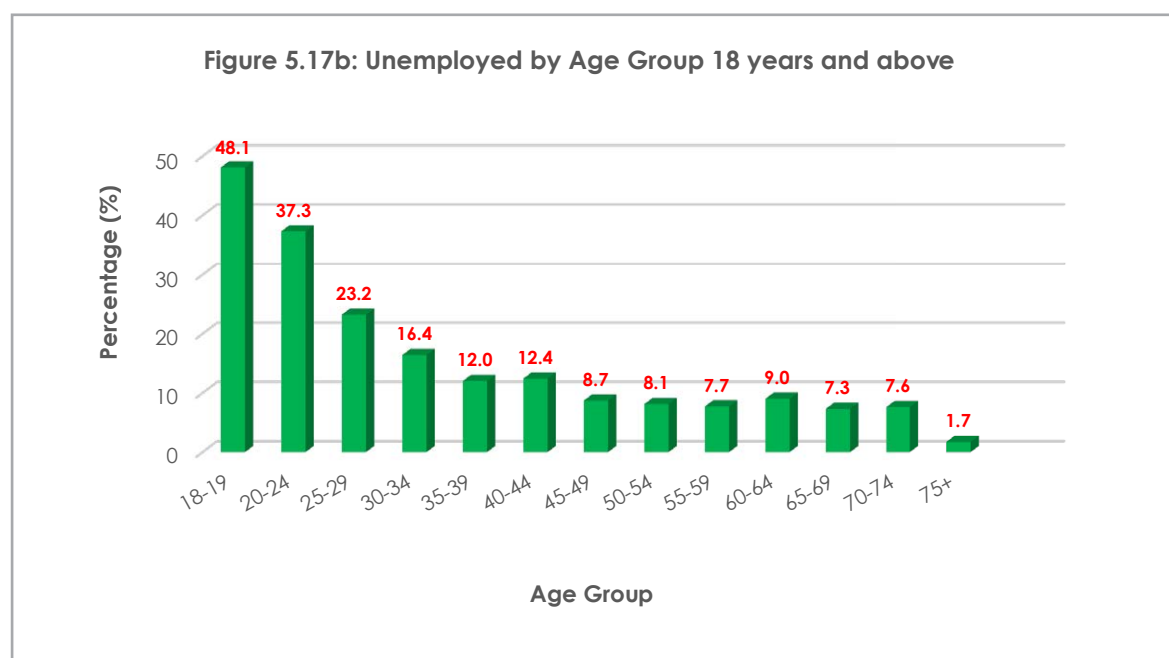

Overall unemployment rate was estimated at 17.6 percent (Revised from 17.7 percent in the August 2017 Stats brief). The estimate relates to individuals who were actively seeking work during the reference period. Addition of the discouraged job seekers to the actively seeking work, raises the total unemployment rate to 33.5 percent. It must be noted that, the internationally used measure of unemployment is for the actively seeking work (17.6 percent).

5.3.1a Unemployed by Age-Groups 15 years and above

The most affected age groups among the actively seeking work were the 18-19 and the 20-24 age group, recording unemployment rates of 48.1 and 37.3 percent respectively. Other affected groups were the 15-17 recording 36.6 and 25-29 with 23.2 percent. The overall unemployment rate was estimated at 17.6 percent (Revised from 17.6 percent in the August 2017 Stats brief), see [Table U9a](#) in the Appendix.

5.3.1b Unemployed by Age-Groups 18 years and above

The most affected age groups among the actively seeking work were the 18-19 and the 20-24 age group, recording unemployment rates of 48.1 and 37.3 percent respectively. Other affected groups were the 25-29 recording 23.2 and 30-34 with 16.4 percent. The overall unemployment rate for unemployed population aged 18 years and above was estimated at 17.5 percent, see [Table U9b](#) in the Appendix.

Unemployment (actively seeking work) by sex shows that more females (53.9 percent) are unemployed. Males recorded (46.1 percent). Urban villages recorded the highest unemployment (51.9 percent), followed by Rural areas with 28.0 percent. Cities and Towns recorded the lowest unemployment (20.1 percent).

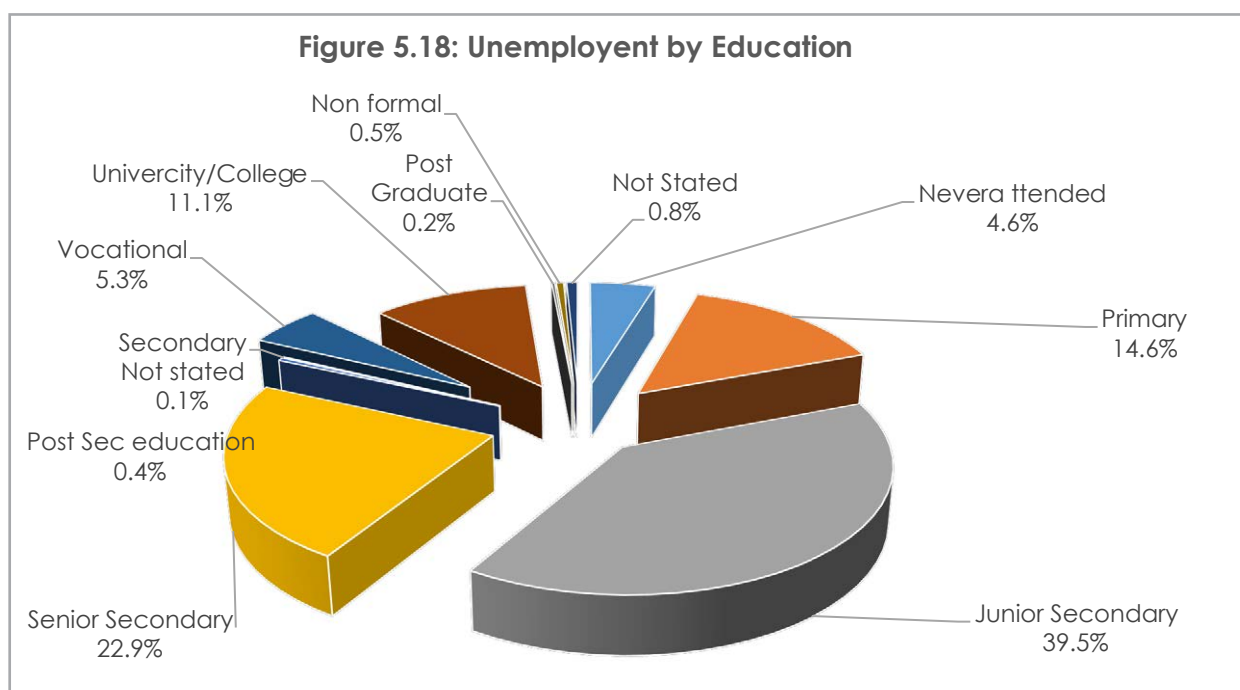

5.3.2: Currently unemployed by duration looking for Work

Unemployment (actively seeking work) by sex shows that 53.9 percent females were unemployed while males were at 46.1 percent. Urban villages recorded the highest unemployment 51.9 percent, followed by rural areas with 28.0 percent. Cities and Towns recorded the lowest unemployment 20.1 percent.

Amongst persons who spent more than a year but less than 3 years looking for work, 55.5 percent were found in Urban village, followed by those in Rural areas with 23.1 Percent, while those in Cities and Towns accounted for only 21.4 percent.

5.3.3: Currently Unemployed by Education Level

Junior secondary holders dominated the currently unemployed with 39.5 percent, followed by Senior secondary and Tertiary (vocational, university and post graduate) completers with 22.9 and 16.6 percent respectively. Primary and Non formal constituted 14.6 and 0.5 percent respectively. A very small proportion (4.6 percent) of the unemployed never attended school.

Females dominated the currently unemployed (79,410) with 53.9 percent. Of these, 37.0 percent completed junior secondary school followed by those who completed senior secondary with 24.1 percent. Female primary school completers constituted 15.6 percent.

School completion by region shows that most of the unemployed University/College graduates (7,893) are in Cities and Towns. This is probably because there are more job opportunities in Cities and Towns. Junior secondary school completers were dominant in Urban Villages with 30,586 compared to 17,944 and 9,565 recorded in Rural Areas and in Cities & Towns respectively. There were 18,728 Senior Secondary leavers in urban villages as compared to 7,533 in Cities & Towns and 7,523 in rural areas.

5.3.4 Currently Unemployed by Training Level

Among the currently unemployed population, 75.7 percent had no training at all. Most of the unemployed with no training (53.9 percent) were women.

Analysis across age groups indicates that most of the unemployed with no training were from Kweneng East recording 16,399. Central Serowe recorded 10,862 unemployed with no training while Ngamiland East and Gaborone recorded 10,092 and 9,085 respectively.

Male unemployed with some training were dominant in the following programmes; Construction trade programmes, Other Craft & Trade programmes, Agriculture, Forestry & Fishery and Engineering & Allied programmes with 84.9 percent, 58.3 percent, 54.7 percent and 53.0 percent respectively. Analysis by region indicates that most of the unemployed with no training were from Kweneng East recording 16,399. Central Serowe recorded 10,862 unemployed with no training while Ngamiland East and Gaborone recorded 10,092 and 9,085 respectively.

5.4 YOUTH (15 – 35 years) ECONOMIC ACTIVITY

Total estimated population of the youth aged 15-35 years from the 2015/16 BMTHS was 747,635. This constitutes (36.1 %) of the total (2,073,675) estimated population from the survey. 46.9 % (350,537) of the youth are males while 53.1% (397,098) are females.

5.4.1 Youth (15 – 35 years) Labour Force

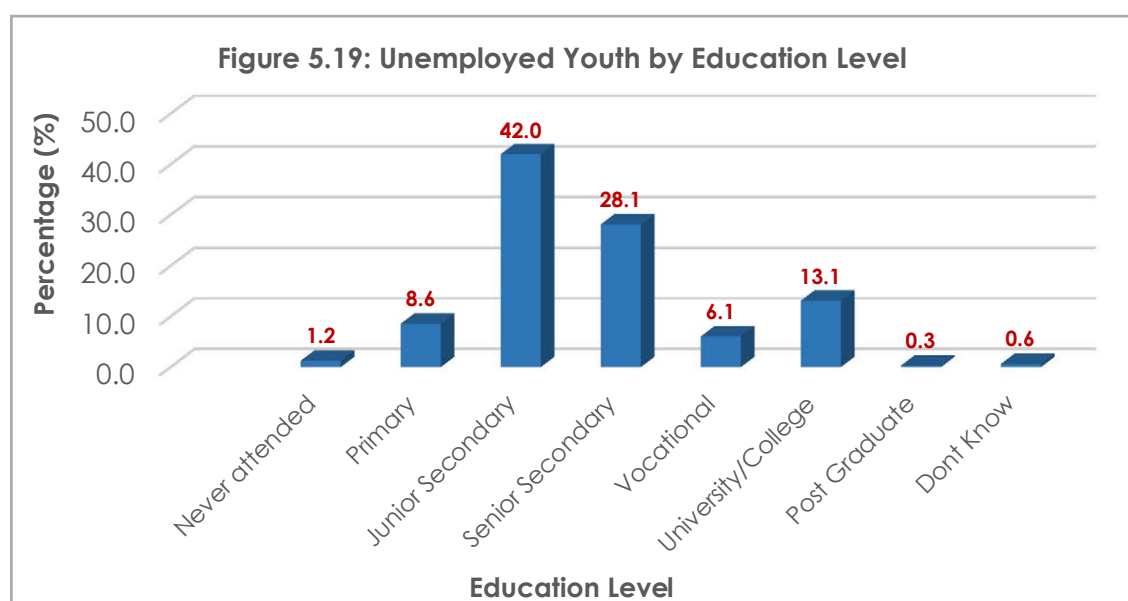

The results show that a total of 427,089 were in the labour force. Out of this, 319,830 (74.9%) were Employed while 107,259 (25.1%) were unemployed.

5.4.2 Unemployed Youth

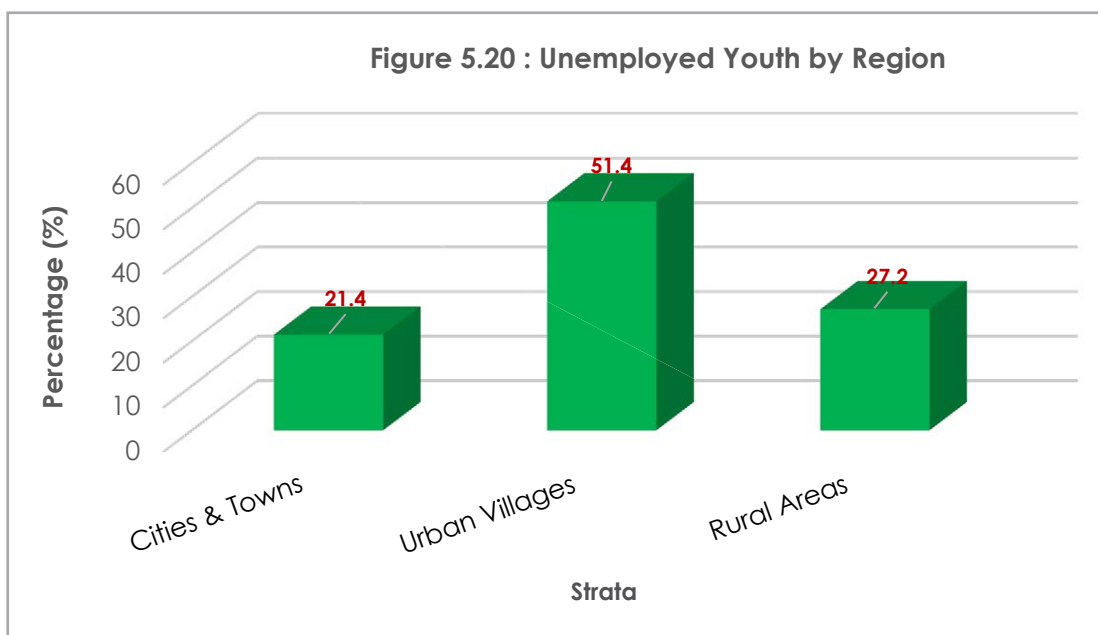

Youth unemployment Rate stands at 25.1%. Females recorded unemployment rate slightly higher than their male counterparts (26.8% and 23.5% respectively).

Unemployment rate by age group shows that the 18-19 and 20-24 are the most affected groups (48.1 and 37.3 percent respectively).

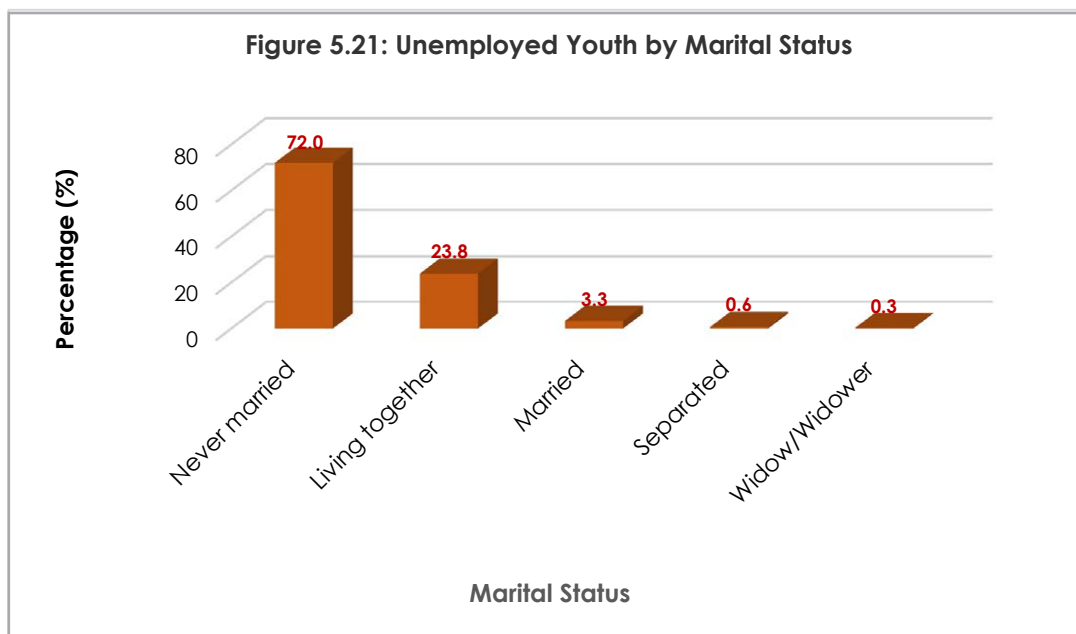

Total unemployed by Education- The results show that youth who completed Junior school are the most unemployed constituting 42.0% followed by Senior secondary school leavers and University/ College with 28.1 and 13.1 percent of the total respectively.

Total unemployed by Region indicates that youths in Urban villages constitutes the most unemployed with 51.4%, followed by youths in Rural areas with 27.2%. Cities and Towns constituted the least (21.4%).

Most unemployed youth reported to have Never married, constituting 72.0 percent followed by the Living together with 23.8 percent. Only a small percent of the unemployed reported to be married (21.4%).

5.4.3 Employed Youth

Out of the 689,582 of the currently employed population, 46.4 percent (319,830) were those aged 15 – 35 years. Majority of the employed youth are working in elementary occupations (28.5 percent), followed by those services & sale workers category (25.4 percent).

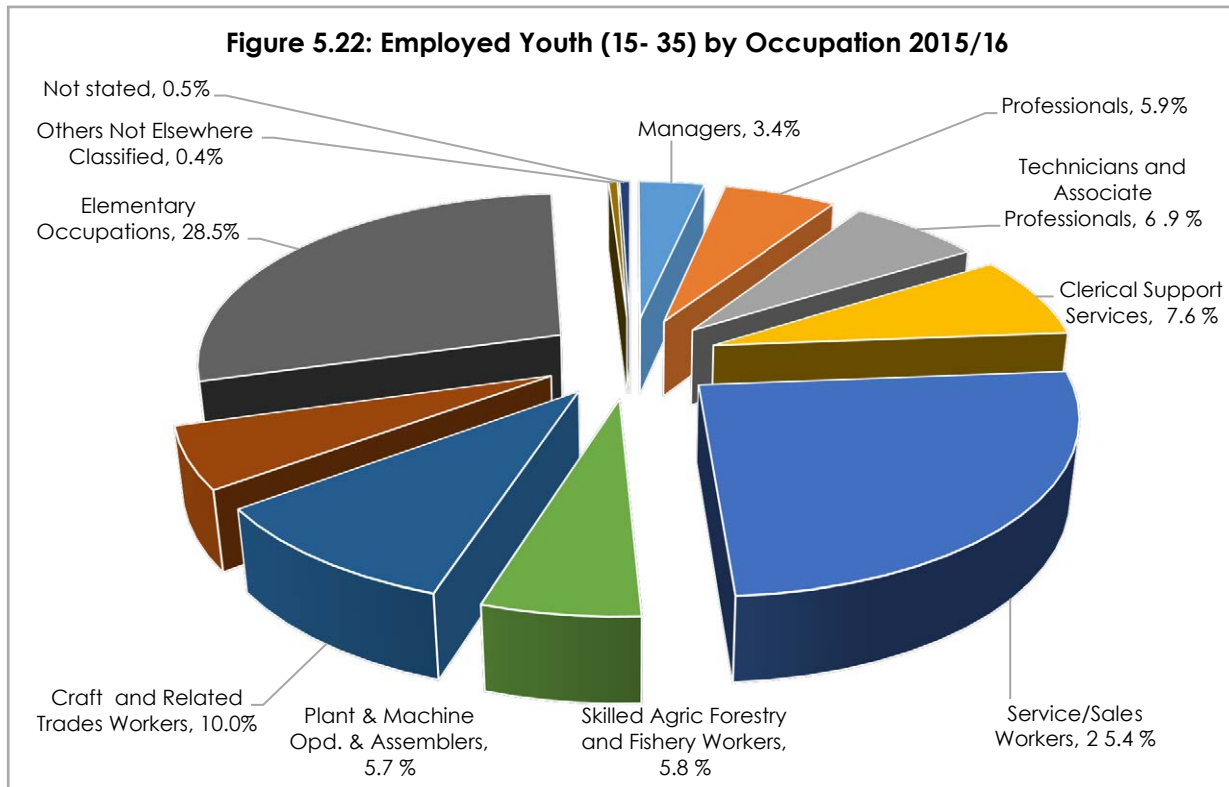

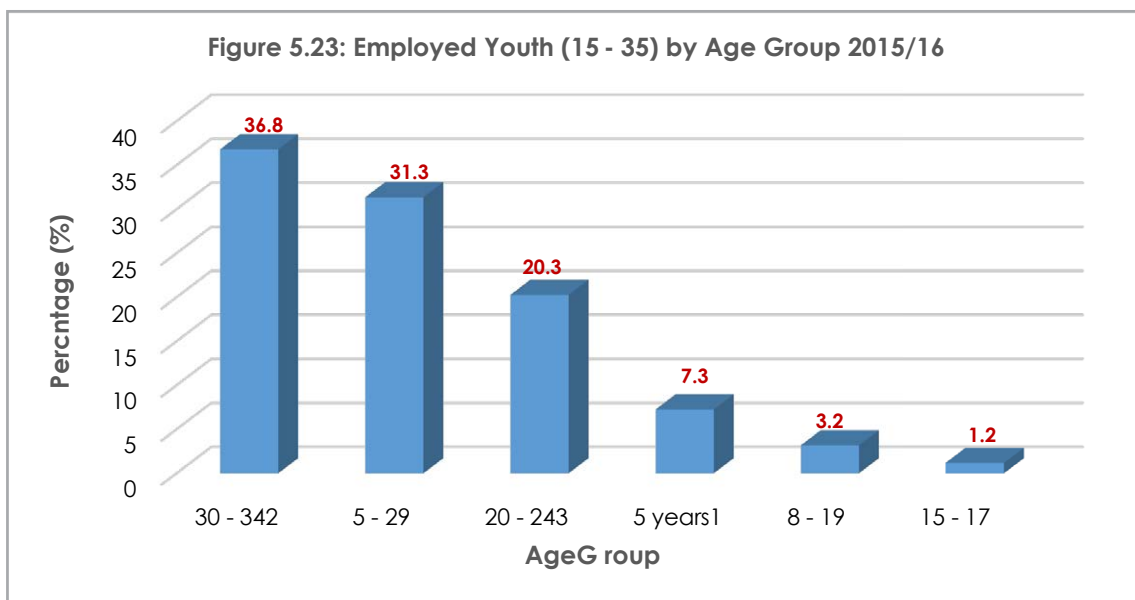

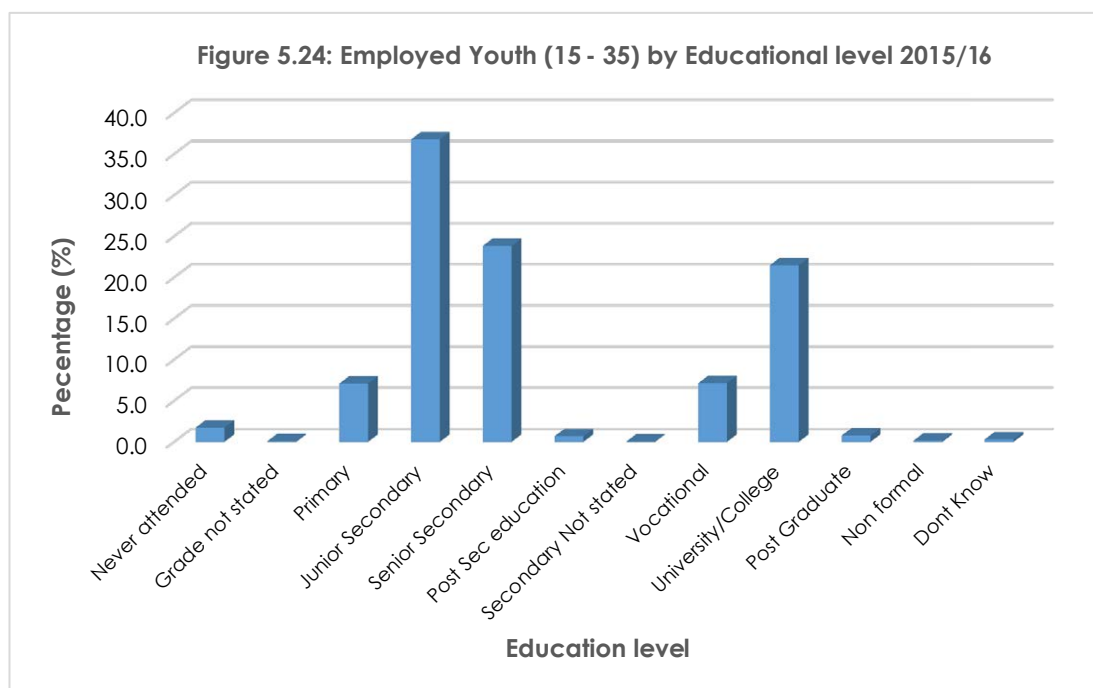

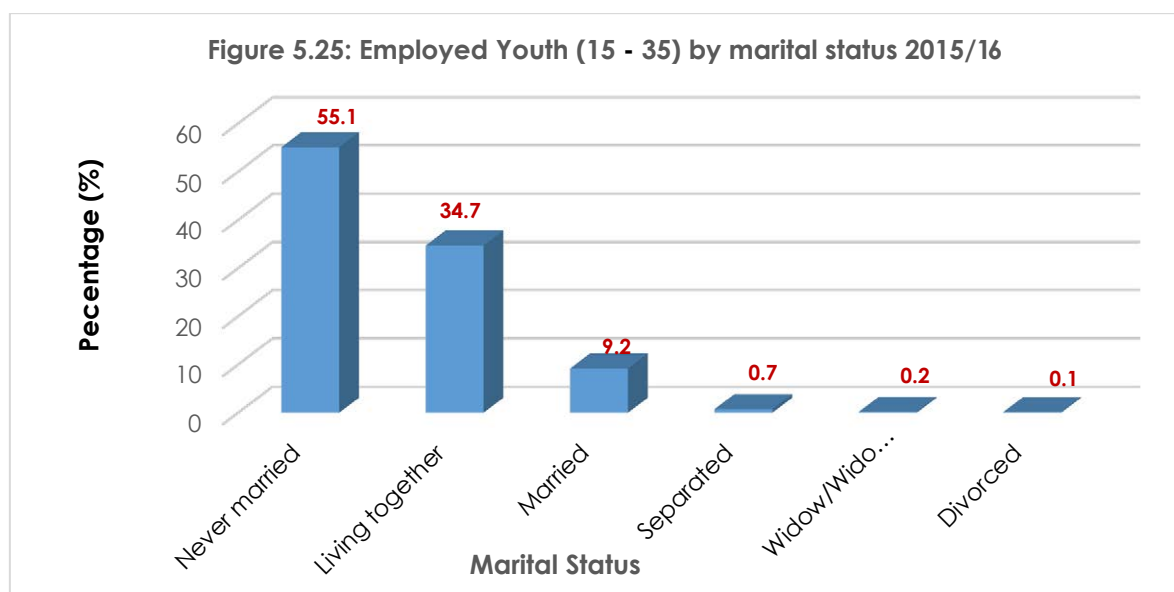

Figure 5.23 below shows that age group 30 – 34 constituted major proportion of youth employment (36.8 percent), followed by age group 25 – 29 with 31.3 percent while age group 15 – 17 is the list with 1.2 percent.

Looking at the employed youth by Education, the results show that youth who completed Junior secondary, senior secondary and university/college education constituted majority of youth employment (36.8 percent, 23.8 percent and 21.5 percent respectively).

Youth employment by marital status shows that 51.1 percent of employed youth were never married followed by the Living together and Married with 34.7 and 9.2 percent respectively.

5.4.4 YOUTH NOT IN EDUCATION, NOT IN EMPLOYMENT OR TRAINING (NEET)

The share of youth not in education, employment or training (also known as “the NEET rate”) shows the number of young person's not in education, employment or training as a percentage of the total youth population. It provides a measure of youth who are outside the educational system, not in training and not in employment, and thus serves as a broader measure of potential youth labour market entrants.

The overall NEET rate was estimated at 39.9 percent. The NEET rate for females was 44.6 percent as compared to 34.5 percent for the males. Analysis by age group indicates that the 18-19 years age group had the highest NEET rate (55.7 percent), followed by the 20-24 and 25-29 years age group with 51.3 and 42.8 percent respectively.

Table 5.19T: NEET Rate by Age group and Sex 2015/16

Age Group	NEET Rate (%)		
	Male	Female	Total
15-17	17.8	17.6	17.7
18-19	51.0	60.4	55.7
20-24	46.5	55.5	51.3
25-29	35.3	49.0	42.8
30-34	27.3	38.9	33.6
35	20.2	38.8	30.6
Total	34.5	44.6	39.9

5.4.5 Youth from Poor Households (Poor Youth)

The results of the Survey show that out of the estimated 747,635 total youth (15-35 years), 112,783 (15.1%) were from poor households. Males constituted 43.0 percent of the poor youth while 57.0 percent were females.

Poverty appears to be more prevalent among the age groups 20-24 and 25-29 with (27.8%, and 23.6 %) respectively.

Analysis by Strata indicates that 47.0 percent of the poor youth were in Rural Areas, followed by those in Urban Villages with 37.9 percent. Poor youth in Cities and Towns accounted for 15.1 percent of the total poor youth.

Table 5.20 T: Youth from Poor Households by Age Group, Strata and Sex 2015/16

Age Group	Cities and Towns			Urban Villages			Rural Areas			Total Poor Youth		
	Male	Female	Total	Male	Female	Total	Male	Female	Total	Male	Female	Total
15-17	920	713	1,633	3,329	3,990	7,319	3,478	3,843	7,321	7,727	8,547	16,273

35	134	238	372	641	1,106	1,747	702	1,436	2,138	1,478	2,779	4,257
Total	7,238	9,835	17,073	18,122	24,574	42,697	23,085	29,928	53,013	48,446	64,337	112,783

5.4.5.1 Youth Labour Force from Poor Households

Out of the total 112,783 poor youth, 46.6 percent (52,528) were in the labour force (the employed and unemployed poor youth). Females constituted 52.4 percent whilst the remaining 47.6 percent were males.

5.4.5.2 Employed Youth from Poor Households

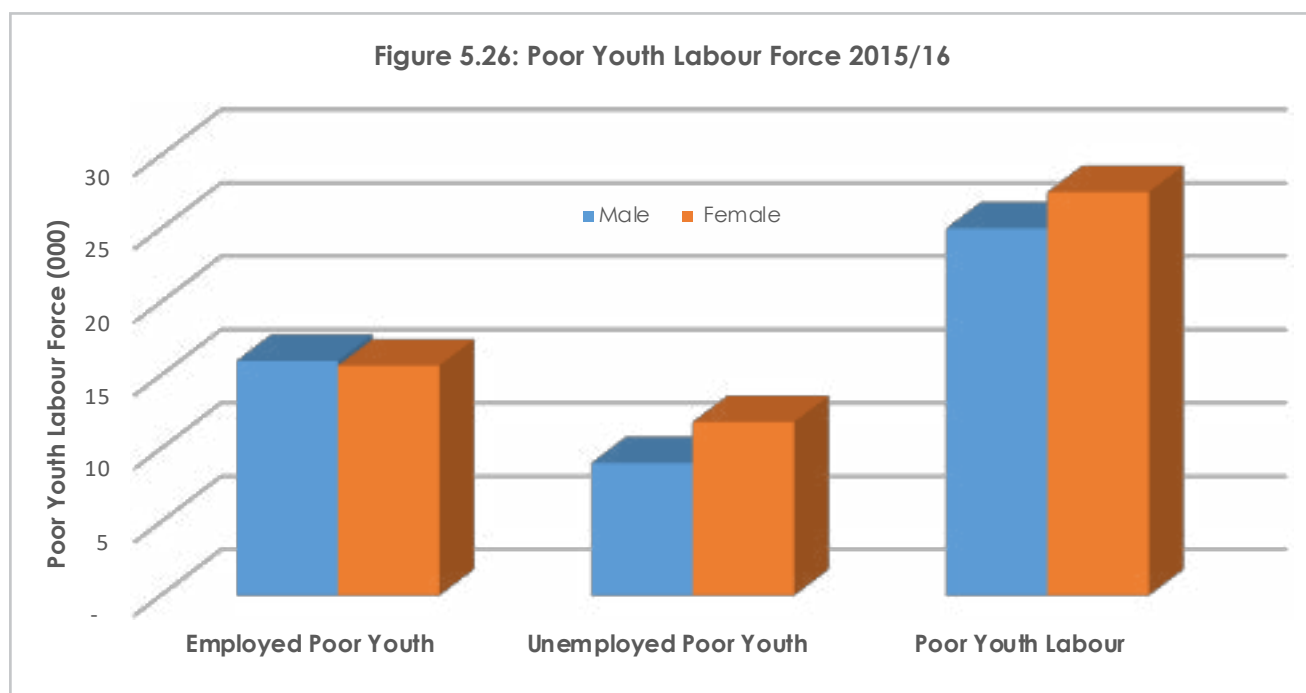

A total of 31,677 of the poor youth were employed. Most of the employed poor youth were engaged in elementary occupations. These constituted 42.0 percent, followed by those engaged in Service/ Sales occupations and Craft & Related Trade workers with 25.6 and 11.0 percent respectively.

Employed poor youth by education level indicates that 52.9 percent had Junior secondary school education, followed by Senior secondary with 20.2 percent. A small percentage of the poor employed youth (8.4 %) had Tertiary education (vocational, university/college).

5.4.5.3 Unemployed Youth from Poor Households

Unemployed poor youth accounted for 39.7 percent of the total poor youth labour force. Females accounted for 56.7 percent of the unemployed poor youth whilst their male counterparts accounted for 43.3 percent.

Predominately, the unemployed poor youth were in Rural areas (51.1%), followed by those in Urban villages and Cities & Towns with 32.3 and 4.0 percent respectively.

5.5 POPULATION OUTSIDE LABOUR FORCE

The estimated total number of persons out of labour force population was 378,994, out of which 35.6 percent (134,762) were males and 64.4 percent (244,236) were females. The largest proportion of persons out of labour force was the 15-17 (24.5 percent). This was followed by the 20-24 year age group with 13.9 percent. These two age groups consist mostly of persons who were attending school.

Scholars accounted for 37.1 percent of the population out of the labour force. Persons who gave "other reason" for being out of labour force accounted for 21.8 percent while Housewives/Homemakers accounted for 15.0 percent of the same population.

Most of the population out of labour force reported that they were Never married (60.4 percent). The Married and Living together recorded 14.8 and 12.2 percent respectively.

Analysis by education level indicate that, 125, 825 (33.2 percent) completed junior secondary school, 18.0 percent completed Primary school, whilst 64,718 (17.1 percent) never attended school. Most of the persons who did not attend school were females (66.7 percent). Tertiary leavers accounted for 43, 756 persons (11.5 percent) of the total population out of labour force. For both males and females, junior secondary school completion dominated the population out of labour force at 37.6 and 30.8 percent respectively.

Most of the people out of the labour force (85.7 percent) had no training and the majority (64.9 percent) of them were females.

Kweneng East district contributed the largest proportion (16.4 percent) of the population out of labour force, followed by Gaborone with 10.3 percent. Central Serowe and Central Tutume contributed 9.5 and 8.4 percent respectively. Sowa and Orapa contributed the least proportion of the population out of labour force with 0.1 percent and 0.2 percent respectively.

5.6 DISABILITY IN LABOUR FORCE

Total number of persons in labour force with disability was estimated at 19,752, this contributed 34.9 percent of the number of persons with disability.

5.6.1 Currently Employed Population with Disability

From a total of 689,528 employed persons, 16,667 persons reported to have some disability characteristics, 7,742 (46.4 percent) were males while 8,926 (53.6 percent) were females.

Age group 55 – 59 constituted the largest proportion of employed persons with disability, 12.2 % (2,033 persons) followed by age group 50 – 54 with 11.9 percent (1,979 persons). (DA1 in the appendix).

Looking at education level, those who completed primary school education (5,177 persons) contributed the highest percentage (31.1 percent) of the total employed persons with disabilities followed by Junior Secondary School (4,430 persons) with 26.6 percent (Table DA 2 in the appendix). In terms of occupation, Skilled Agric Forestry and Fishery Workers constituted 29.2 percent of the persons with disability while those who were employed in elementary occupations contributed 24.7 percent. See Table D4 in the appendix.

5.6.2 Unemployment by Disability

Total estimated unemployed disabled population from the 2015/16 BMTH Survey was 3,085. The majority of these were females recording 2,179 (70.6 percent), whilst their male counterparts recorded a total of 906 (29.4 percent). Unemployment of the disabled by age group (table DA1 in the appendix) shows that the 30-35 age group had the highest percentage of the unemployed, recording 24.7 percent, followed by the 25-29 and 40-44 with 18.5 and 16.9 percent respectively. Total unemployment rate for the disabled was recorded at 14.3 percent, see Table DA 1.

5.7. BUSINESS HOUSEHOLD CHARACTERISTICS

This sub chapter presents information on the socioeconomic characteristics of the business households and the individual respondents such as age sex, education etc.

5.7.1.1 Total Population in Business Households

Table 5.21T shows that total population in business household estimated in 2015/16 BMTH Survey was 458,398, while for the 2007 Informal Sector Survey it was 224,230. The population has almost doubled between the 2 surveys, which is also shown by the increment in number of Businesses. Of the 458,398 population females accounted for 53.2 percent. The results further shows that 49.9 percent of the persons living in the business households were more concentrated in Urban Villages, followed by Cities and Towns with 26.1 percent. The majority of the population living in Urban Villages were females constituting 52.9 percent.

Table 5.21T: Total Population in Business Households by Region and Sex – 2015/16 and 2007

Region	2015/16				2007			
	Male	Female	Total	% Total	Male	Female	Total	% Total
Cities and Towns	55,691	64,131	119,822	26.1	38,355	43,585	81,940	36.5
Urban Villages	107,695	120,942	228,637	49.9	39,455	46,988	86,443	38.6
Rural Areas	51,044	58,894	109,938	24.0	25,441	30,403	55,847	24.9
Total	214,430	243,968	458,398	100	103,251	120,979	224,230	100.0

Table 5.22T below shows that those individuals who completed primary school dominated the Population in Business Households with 28.3 percent, followed by Junior Secondary and Senior Secondary completers with 22.9 and 13.9 percent respectively. The population who never attended school accounted for 5.1 percent.

Table 5.22T: Total Population in Business Households by Education Attainment and Sex – 2015/16

Education	Sex			% Total
	Male	Female	Total	
Never attended	693	735	1,427	0.3
Primary	59,007	70,600	129,606	28.3

Total	214,430	243,968	458,398	100.0

5.7.1.2 Currently Employed in Business Households

The employed comprise all persons of working age, who, during a specified brief period, such as one (1) week did some work for Paid employment (whether at work or with a job but not at work; or were involved in Self-employment activities (whether at work or with an enterprise but not at work). The concept "at work" refers to persons who, during the reference period performed some work for wage or salary, in cash or in kind (for paid employment), or persons who during the reference period performed some work for profit or family gain, in cash or in kind (for self-employment).

5.7.1.3 Currently Employed

There were 184,852 employed persons aged 15 years and above in the business households estimated by 2015/16 Survey. About 98,696 or 53.4 percent were females while 86,156 (46.6 percent) were males. Amongst the employed population 52.7 percent were in Self-Employment, followed by those who are employed in the Private Sector and Private Household with 18.4 percent and 6.5 percent respectively. There were more females (55.9 percent) among those who are in Self-employment, see **Table 5.231T** below.

Table 5.23T: Currently Employed by Employer Category and Sex 2015/16

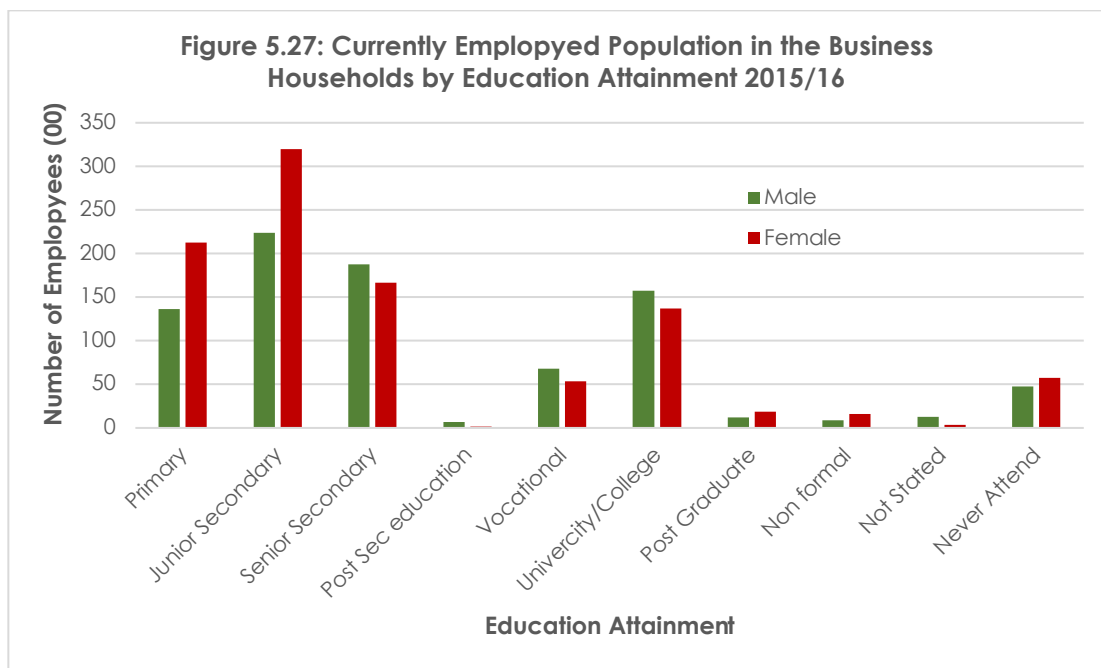

Employer Category	Sex			% Total
	Male	Female	Total	
Central government	5,071	4,771	9,842	5.3
Local government	3,055	6,026	9,081	4.9

Private sector	17,989	16,032	34,021	18.4
Non-Government organization	1,298	783	2,081	1.1
Private household	5,207	6,881	12,089	6.5
Ipelegeng	935	4,331	5,267	2.8
Self-Employment	42,923	54,511	97,434	52.7
Worked in Own Farm/ Cattle Post	6,725	3,193	9,919	5.4
Not stated	294	290	584	0.3
Total	86,156	98,696	184,852	100.0

5.7.1.4 Currently Employed by Education Attainment and Sex

Figure 5.27 and **Table 5.24T** shows the comparison of male and female employee distribution by education attainment. The figure shows that those who have completed junior secondary school dominated the employed population in business households, followed by those who have completed senior secondary school and primary education with 19.2 percent and 18.9 percent respectively. Females dominated all the above mentioned categories except for those who have senior secondary education which is dominated by males.

Table 5.24T: Currently Employed by Education Attainment and Sex 2015/16

Education	Sex			% Total
	Male	Female	Total	
Primary	13,625	21,273	34,898	18.9
Junior Secondary	22,381	31,959	54,340	29.4
Senior Secondary	18,752	16,662	35,415	19.2
Post Sec education	708	178	885	0.5

Not Stated	1,291	373	1,664	0.9
Never Attend	4,783	5,749	10,533	5.7
Total	86,156	98,696	184,852	100.0

5.7.1.5 Currently Unemployed in Business Households

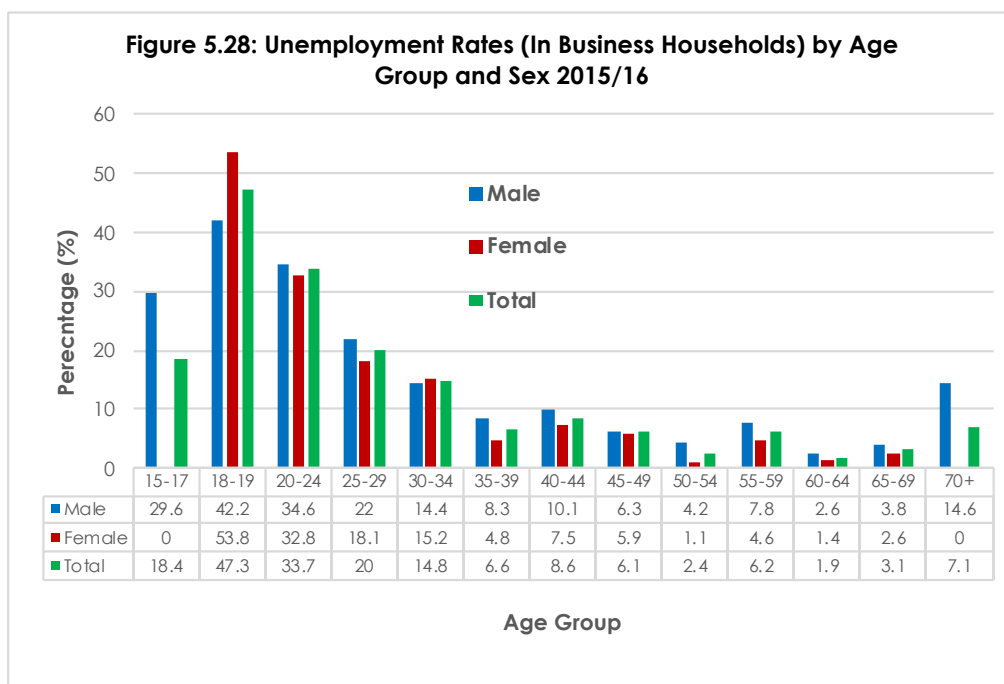

The unemployed persons or population can be described as all persons in the working age group, whom during a specified short reference period (7 days) were seeking and also being available for work. This is a category which covers persons who are ready to supply labour for the production of goods and services, but they are still seeking where to supply the labour. Generally

Unemployed persons are defined as working age persons who were:

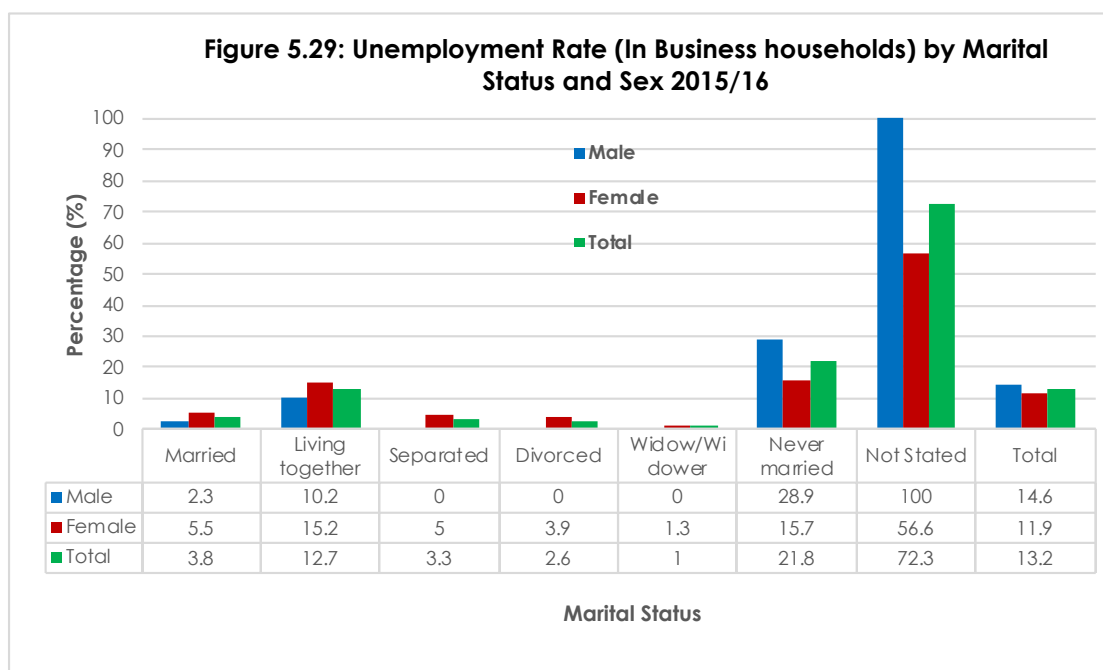

1. Not employed in last 7 days / reference week
2. Carried out activities to seek employment in last 4 weeks / reference Month
3. Available to start job/business in reference week OR in short period

The total economically active population known as Population in Labour Force (i.e. employed and unemployed) in business households was 212,845, of which 27,993 were unemployed. The 2015/16 BMTH Survey unemployment rate from business households was 13.2 percent, lower than the 20.2 percent estimated in the 2007 Informal Sector Survey. Furthermore, the result show that the majority of the unemployed were males (14.6 percent), see **Table IS12** in the appendix.

The distribution of unemployment rates by age groups in the business households are illustrated in **Figure 5.27** and also shown in **Table IS12** in the appendix. A significant number of the unemployed persons were aged below 30 years (27.8 percent) with the dominant age groups being 18-19 (47.3 percent), 20-24 (33.7 percent) and 25-29 (20.0 percent).

The unemployment rate in business households according to marital status and sex are displayed in **Figure 5.29**. Most of the unemployed reported that they were “Never Married” 8 (33.4 percent), followed by the “Living together” with 12.4 percent. Males dominated in the “Never Married” and “Living Together” categories with 40.2 and 14.0 percent respectively.

5.7.2 HOUSEHOLD ENTERPRISES' CHARACTERISTICS

This Section outlines various characteristics of household enterprises/businesses in Botswana captured during the Botswana Multi Topic Household Survey. The businesses consist of both formal and informal enterprises. Formal Enterprises are well registered companies keeping formal accounts,

employing 5 or more employees and operating in a fixed location but not in the household. While Informal Businesses comprise one or all of the opposite of the formal businesses characteristics.

5.7.2.1 Household Enterprises

The 2015/16 BMTH Survey estimated the total number of enterprises as 110,275 of which 48,535 (44.0 percent) were in female headed households. The number of enterprises increased, almost tripled, as compared to 44,227 enterprises estimated by the 2007 Informal Sector Survey .

5.7.2.2 Household Enterprises by Industry

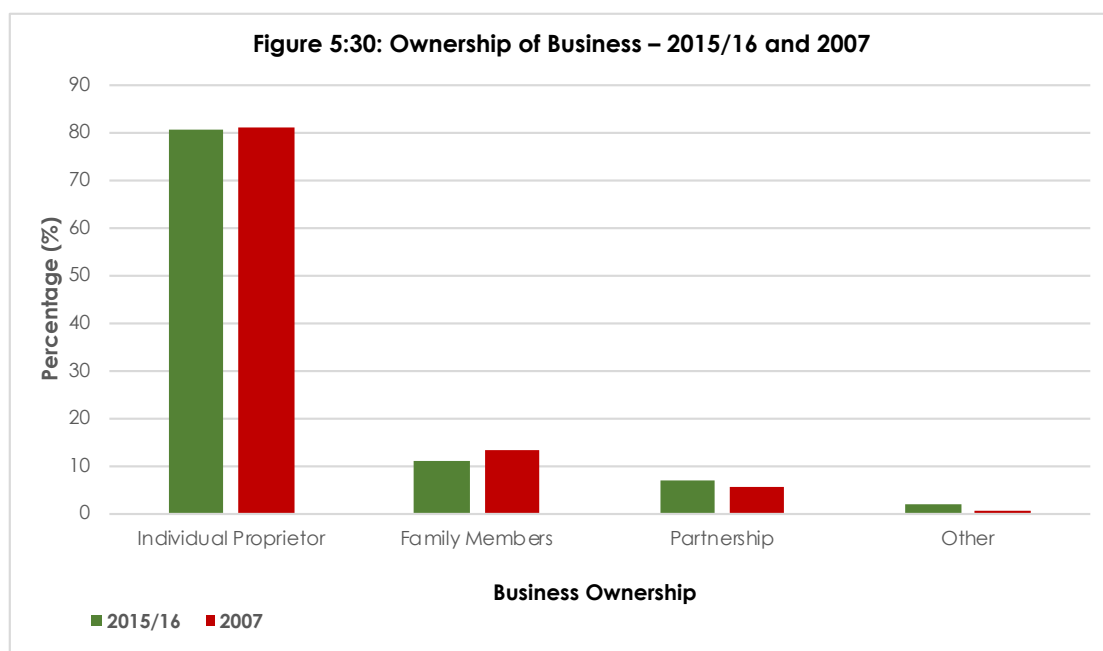

The majority of enterprises were found in the "Wholesale & Retail" with 52,194 (47.3 percent), followed by "Manufacturing", "Real Estate" and "Other Service Activities" with 14.4, 10.5 and 8.2 percent respectively. Females dominate in almost all the industries except "Construction", "Transport" and "Health & Social Work"; refer to [Table IS6](#) in the appendix.

5.7.2.3 Household Enterprises by District

As shown in [Table IS4](#) in the appendix the majority of the enterprises were found in Kweneng East (17.5 percent), followed by Gaborone with 17.4 percent while Francistown and South East constituted 5.7 percent each. Other districts accounted for less than 5 percent, except Ngamiland East which recorded 5.1 percent.

5.7.2.4 Household Enterprises by Ownership

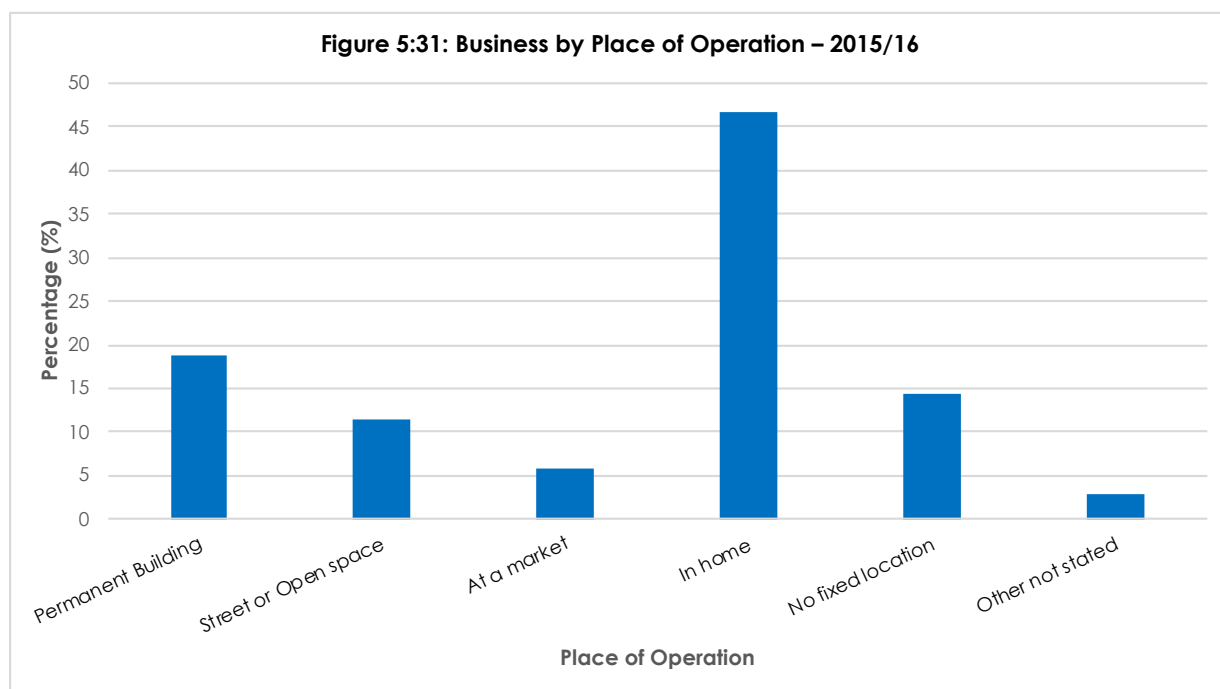

Distribution of individual enterprises by ownership shows that 80.5 percent of businesses are owned by "Individual Proprietors", "Family Members" ownership contributed 10.9 percent while "Partnership" constituted 5.9 percent. The same pattern as above was observed in the 2007 Informal Sector Survey. A graphical presentation of household enterprises by ownership is shown in [Figure 5.30](#).

5.7.2.5 Place of Operation of Business

[Figure 5.31](#) shows business place of operation. Most of the businesses (46.6 percent) were operating within Own Home, followed by businesses operating in Permanent building recording 18.8 percent

and 14.5 percent were operating not in a fixed location. (Also refer to [Table IS5](#) in the appendix.

5.7.2.6 Informal Sector Businesses

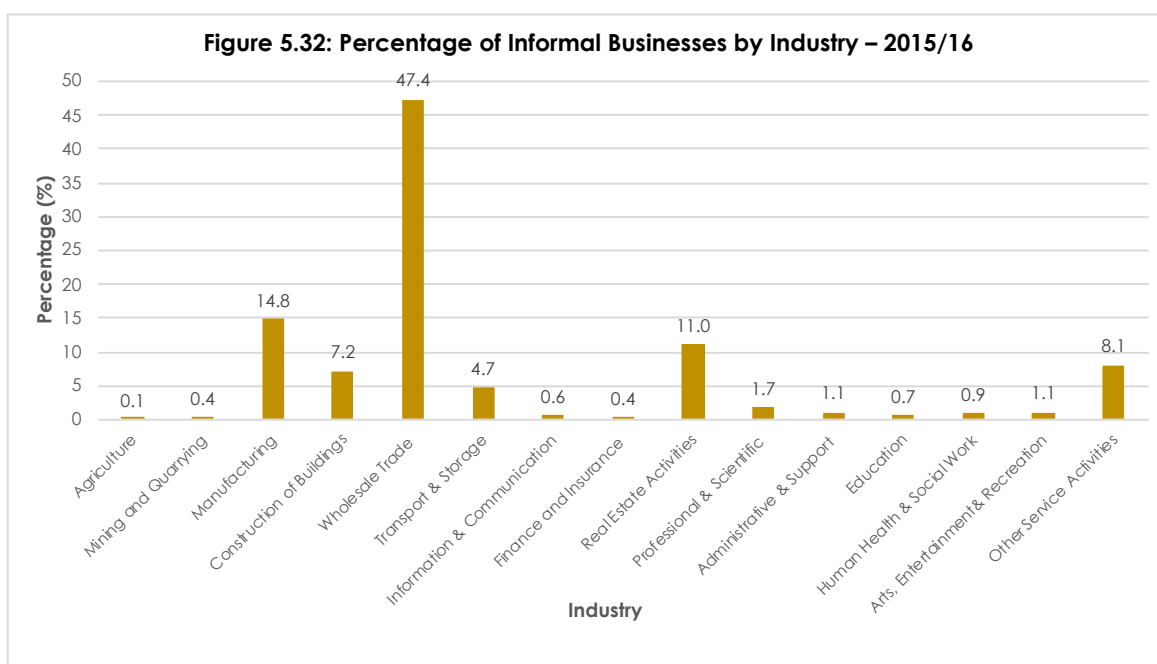

The chapter summarizes the results of the informal sector businesses after screening all the formal enterprises. More detailed information, among others; place of operation; source of capital; ownership is presented.

5.7.3 General Information

After screening all non-informal enterprises, the 2015/16 Multi Topic Household Survey estimated the total number of informal businesses as 105,445, of which 55.5 percent were in households headed by males and 44.5 percent in households headed by females. The number of informal business enterprises increased by more than 100 percent as compared to 40,421 businesses estimated by the 2007 Informal Sector Survey. The significant increase could be attributed to the decline in the formal employment opportunities in the economy, and the establishment of various industry support agencies by the government, e.g. LEA.

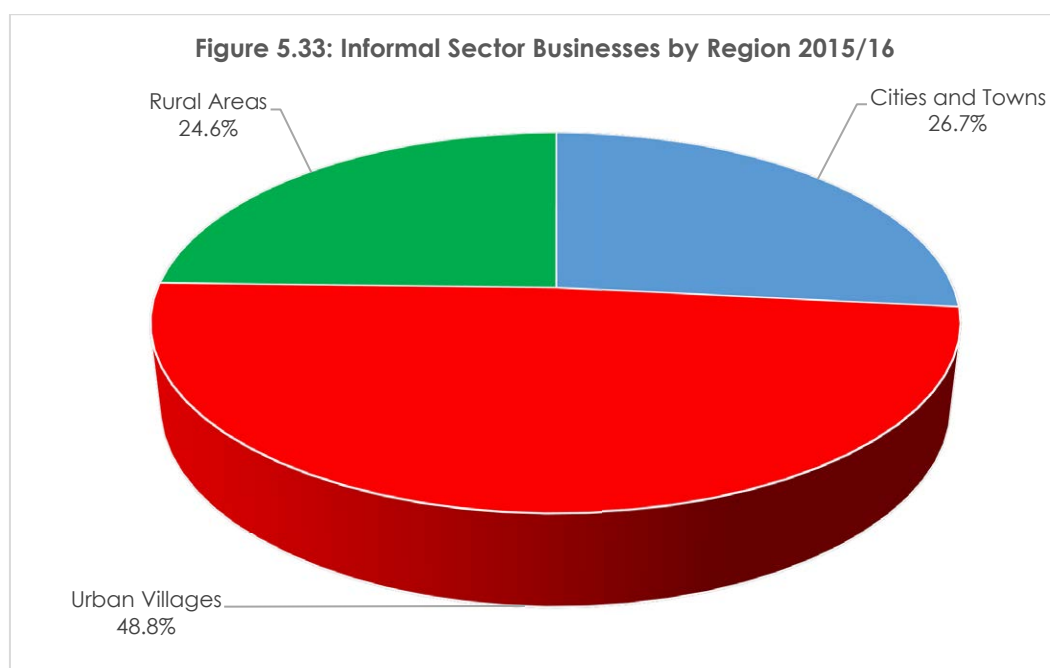

5.7.3.1 Informal Business by Industry

Most of the businesses 49,946 (47.4 percent) were in Wholesale & Retail Trade industry, followed by Manufacturing with 14.8 percent and Real Estate with 11.0 percent. This trend was also observed in the 2007 Informal Sector Survey, except that manufacturing industry contributed thirdly while Real Estate industry followed Wholesale & Retail. This reveals that a pronounced majority of the informal sector enterprises are active in the trade sector. This is not surprising, given that other activities require a large amount of initial capital investment, which is often not affordable to informal enterprises. Interestingly, the 2015/16 BMTH Survey shows that a significant number of informal enterprises are engaged in activities such as manufacturing and construction.

5.7.3.2 Informal Business by Region and District

Informal sector activities tend to be more concentrated in urban villages and cities & towns recording 48.8 percent and 26.7 percent respectively as shown in **Figure 5.33**. Kweneng East contributed 17.7 percent of the informal sector businesses; followed by Gaborone and Central Serowe with 15.4 and 7.7 percent respectively; see **Table IS11** in the appendix.

5.7.3.3 Informal Business Source of Capital

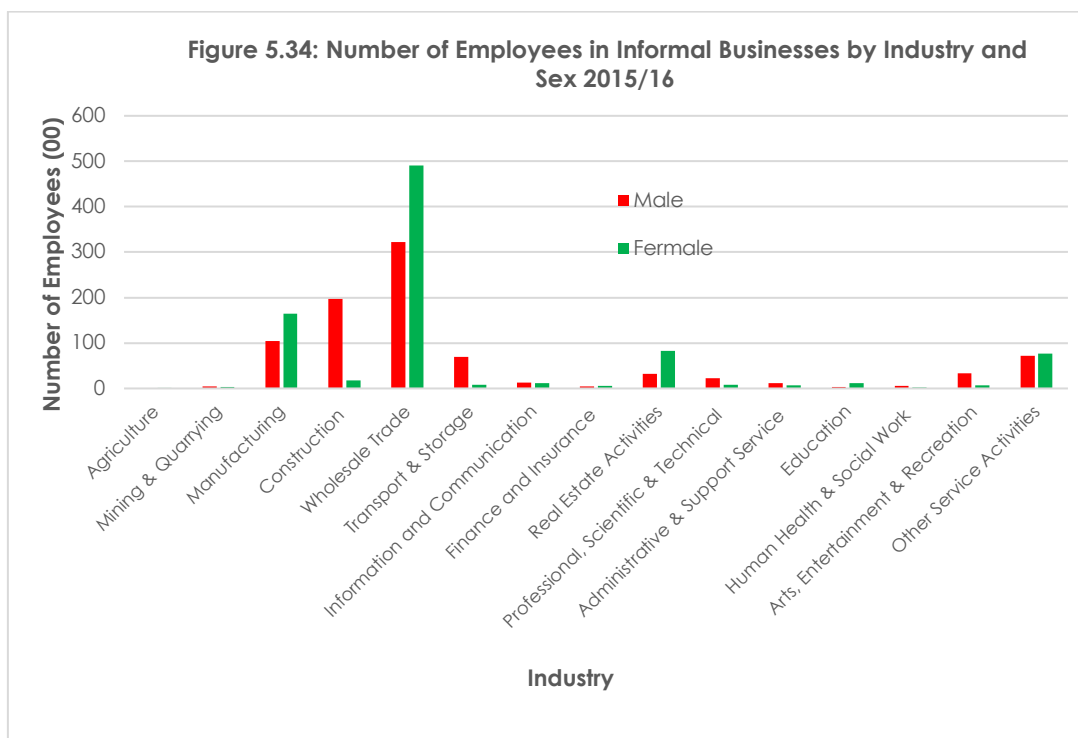

The majority (45.8 percent) of the businesses were financed from Household savings or sale of assets; followed by businesses which do not need Capital with 24.4 percent (See **Table IS8** in the appendix). Loans or grants from relatives feature as source of capital for some informal businesses as this accounted for 6.0 percent, Commercial Banks accounted for 2.6 percent while Business which were inherited accounted for 2.0 percent as source of capital.

5.7.3.4 Informal Sector Employment

Informal sector operators were requested to provide information on the number of persons that were employed in their businesses. The results show that there were 179,483 persons employed in the informal sector, of which 50.0 percent were females. The industries which have employed majority of the people was Wholesale & Trade, constituting 45.3 percent, followed by Manufacturing and Construction of Buildings with 15.0 percent and 12.0 percent respectively. Females in Manufacturing and Wholesale & Trade dominated their male counterparts recording 61.1 percent and 60.4 percent respectively.

Table 5.25T: Estimated Number of Employees in Informal Businesses by Industry and Sex 2015/16

Industry	Sex			% Total
	Male	Female	Total	
Agriculture, Forestry and Fishing	-	65	65	0.0
Mining and Quarrying	477	295	772	0.4
Manufacturing	10,485	16,486	26,971	15.0

Total	89,687	89,796	179,483	100.0

Chapter 6: Poverty Incidence and Profiles

This chapter presents the poverty incidence and inequality indicators from the 2015/16 Botswana Multi-Topic Household Survey (BMTHS). The chapter also covers poverty incidence and inequality trends based on the 2002/3 Household Income and Expenditure Survey (HIES), the 2009/10 Botswana Core Welfare Indicators Survey (BCWIS) and the BMTHS.

Poverty incidence is determined by computing the Poverty Datum Line (PDL) based on the cost of a basket of goods and services assessed to be necessary to meet basic needs of household members. The assessment of basic needs is based on the requirements for food, clothing, personal items, household goods & services and shelter. The daily/monthly requirements for PDL basket components differ according to sex and age, consequently the household composition.

The cost of the basket is then compared with the observed total consumption expenditure for the household. The total consumption (welfare aggregate) of the household is then determined by adding up the total Consumption Expenditure, Aid, Wages in-kind, Gifts Received, School Meals and Unearned Income in-kind. When the estimated/expected PDL for the household is higher than its observed total consumption, the household is defined as poor. This means that the household is living below the estimated basic needs (living below the PDL) for a household of its size and composition, all its household members are considered to be poor.

6.1 Poverty Incidence

Following the release of the Poverty Stats brief in January 2018, there has been a revision in the poverty incidence. This was necessitated by the revision of the total household consumption/welfare aggregate. In the Poverty Stats brief, total household consumption/welfare was based on the recorded expenditures in the 14 days that the diary was being administered and adjusted for a 28 day month. It was then observed that the food expenditure estimate for the 28 days was an underestimation in the sense that it omits food expenditures by households for the rest of the month. In this report the food expenditure has been adjusted for a 30 day month (30.4 days, based on observed consumption of purchased food during the 14 day period). This gives a more complete estimate as it includes food purchases that occurred days before the diary was administered.

On the basis of the above, the 2015/16 BMTHS results show that 16.3% of the population live below the poverty datum line. A comparison between 2002/03 HIES, 2009/10 BCWIS and 2015/16 BMTHS indicate that poverty reduced by 11.3 percentage points between HIES and BCWIS (30.6% to 19.3%) and by 3 percentage points (19.3% to 16.3%) between BCWIS and the BMTHS ([Table 6.1T](#)). At household level poverty incidence reduced by 10.9 percentage points from 21.7% to 10.8% between 2002/03 and 2009/10; and from 10.8% to 9% between 2009/10 and 2015/16.

6.1.1 Poverty Incidence by Strata

Poverty Incidence by Strata shows an increased from 8.0 to 9.4 percent in cities/towns between 2009/10 and 2015/16. The urban villages recorded a decrease in poverty incidence between the two periods from 19.9 to 13.3 percent, while in rural areas the poverty incidence decreased marginally from 24.3 to 24.2 percent. A comparison between BMTHS and the 2002/03 HIES shows a higher reduction in poverty for rural areas than in urban villages and cities/towns. In rural areas poverty reduced by 20.6 percentage points (44.8% to 24.2%), and for urban areas it reduced by 12.1 percentage points (25.4% to 13.3%), while in cities and towns it reduced by 1.2 percentage points (10.6% to 9.4%) ([Figure 6.1](#) and [Table 6.1.T](#)).

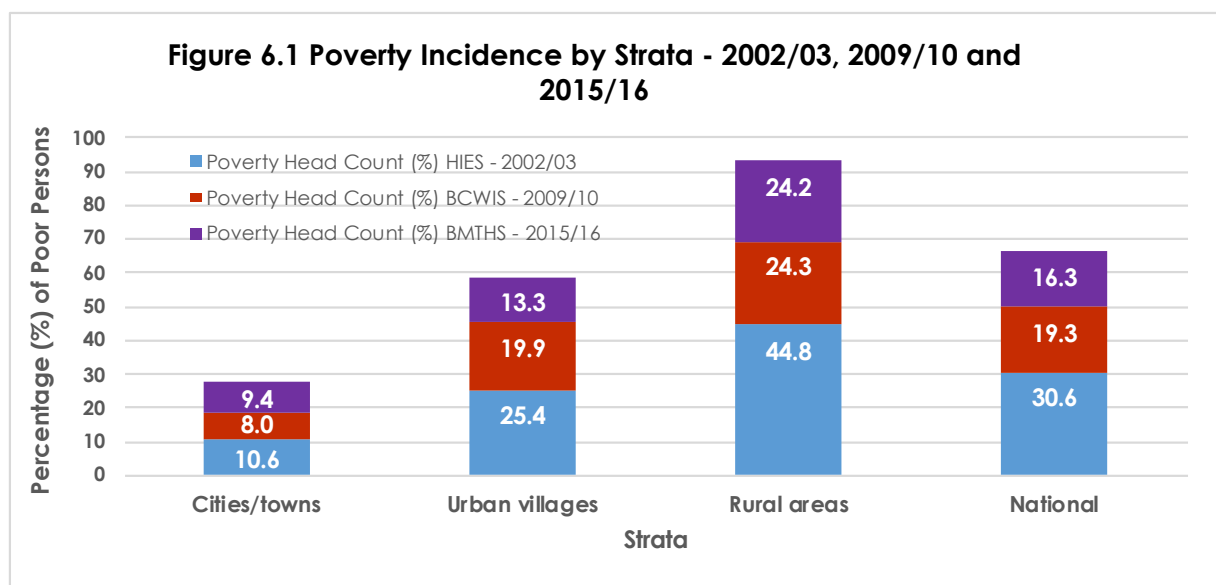

Table 6.1T: Poverty Incidence by Strata - 2002/03, 2009/10 and 2015/16

Stratum	Poverty Head Count (%)	House-hold Poverty Incidence (%)	Number of persons below poverty datum line	Poverty Head Count (%)	House-hold Poverty Incidence (%)	Number of persons below poverty datum line	Poverty Head Count (%)	House-hold Poverty Incidence (%)	Number of persons below poverty datum line
	HIES - 2002/03			BCWIS - 2009/10			BMTHS - 2015/16		
Cities/towns	10.6	8.8	39,113	8.0	5.2	31,401	9.4	6.9	41,093
Urban villages	25.4	17.4	138,547	19.9	10.4	134,467	13.3	6.8	121,230
Rural areas	44.8	33.4	321,808	24.3	14.5	196,249	24.2	13.1	175,087
National	30.6	21.7	499,467	19.3	10.8	362,116	16.3	9.0	337,410

* Note: Household Income and Expenditure Survey (HIES) and Botswana Core Welfare Indicators Survey (BCWIS)

6.1.2 Poverty Incidence Percentage Shares by Sex and Age Group

The results of the BMTHS show that at national level there are more poor females than males. Within strata analysis shows that at national level poverty is more prevalent among female headed households compared to their male counterparts with 54.2% and 45.8% respectively. The higher prevalence of poverty among females was also recorded in the 2009/10 BCWIS at 55.2% compared to 44.8% males. Across strata data shows that the majority of the poor are in rural areas for both male at 52.4% and female with 51.5%. (**Table 6.2T**).

The distribution of poor population by age group and sex as depicted in **Figure 6.2** Shows that poverty incidence is higher among younger age groups (0-4years 16.9%, 5-9year 14.5%, and 10-14 years 12.3%). This is also consistent with the population distribution across the different age groups where the population figures are higher among the younger age groups (0-4years (12.5%) 5-9 years (11.6%) and 10-14 years (10.3%) out of the 2015/16 BMTHS estimated population of 2 073 675 (**Table 1D**, in the Appendix).

Gender disparities among the younger age groups shows that poverty is more prevalent among males in younger age groups between ages 0 to 19 mainly age groups that are dependants. Beyond age group 15-19, poverty is more prevalent among females.

Figure 6.2 Percentage Distribution of Poor Population by Age Group and Sex 2015/16

6.1.3 Poverty Incidence by Districts and Sub-Districts

The disaggregation of Poverty incidence by district and sub-district level shows that poverty is more prevalent in Kweneng West with 50.6%, Ngwaketse West with 40.3% and Kgalagadi South at 39.5%. The lowest poverty incidence was recorded at Sowa with 5.0 followed by North East with 7.2% (**Figure 6.3, 2015/16 Poverty Incidence MAP and Table 6.3T**).

Figure 6.3: Poverty Incidence by District and Sub-district 2009/10 and 2015/16

6.2 Poverty Incidence at Household Level

This section of the report presents poverty incidence at household level. The focus is on indicators that relate to household heads, to show those that fall below the poverty datum line, their main sources of income, their geographical location and the extent to which they are affected by other challenges such as low educational level, disability and chronic illnesses.

6.2.1 Poverty Incidence at Household Level by Sex of Head

Table 6.4T shows that at national level, within strata the percentage of poor female headed households is higher at 55% compared to their male counterparts at 45 %, showing that poverty incidence is higher among female headed households.

A comparison with the 2009/10 BICWIS shows that within strata, poverty among male household heads has increased by 3.9 percentage points from 41.1% to 45% while for females household heads it has decreased by 3.9 percentage points from 58.9% to 55%.

The male headed household analysis across strata shows that the highest percentage of male headed poor households were in rural areas at 51.5%, followed by urban villages with 29.2% and cities/towns with 19.3%. The same pattern was observed among poor Female headed households

with 48.9% of the households located in rural areas, 32.5% in urban villages and 18.6% in cities and towns. The poverty incidence for male headed households in rural areas at 51.5% is higher than their female counterparts with 48.9%. The reverse pattern was observed in urban areas and cities/towns with female headed households recording a higher percentage than males (**Table 6.4T**).

Table 6.4 T: Percentage Share Distribution of Poor Households by Strata & Sex of Head 2015/16

				2009/10 BCWIS	
	Male	Female	Total	Total

6.2.2 Distribution of Poor Households by Main Source of Income

The percentage distribution of poor households by main source of income shows that at national level poor households rely more on income from wage employment as 50.3% of the households depend on it. The contribution of income from wage employment has increased by 10.6 percentage points from 39.7% during the 2009/10 BCWIS to 50.3% in the 2015/16 BMTHS. Next to wage employment, although at a lower percentage are Remittances from inside Botswana at 11.9% followed by Pensions at 10.0% (**figure 6.4** and **Table 6.5T**).

During BCWIS, households were more dependent on pensions 2009/10 compared to 2015/16. This is depicted by the 14.3% of the households stating it as their main source of income in the 2009/10 BCWIS and has since reduced to 10.0% in the 2015/16 BMTHS. For the two surveys, a comparison of the top three sources of income shows that only wage income has maintained its top position while the second highest for BCWIS was pensions and for BMTHS the second highest was remittances from inside Botswana. Remittances from within Botswana also show a decrease of 1.5 percentage points between the two survey periods. (**Table 6.5T**).

The data shows that beneficiaries of remittances within and outside Botswana are mainly in rural areas. Remittances from within Botswana were higher among rural households with 13.1% followed by 9.3% in urban villages and 7.3% in Cities/towns. In addition, remittances from outside Botswana were only recorded for the rural areas although at a low rate of 0.8%.

Figure 6.4: Percentage Distribution of Poor Households by Main Source of Income

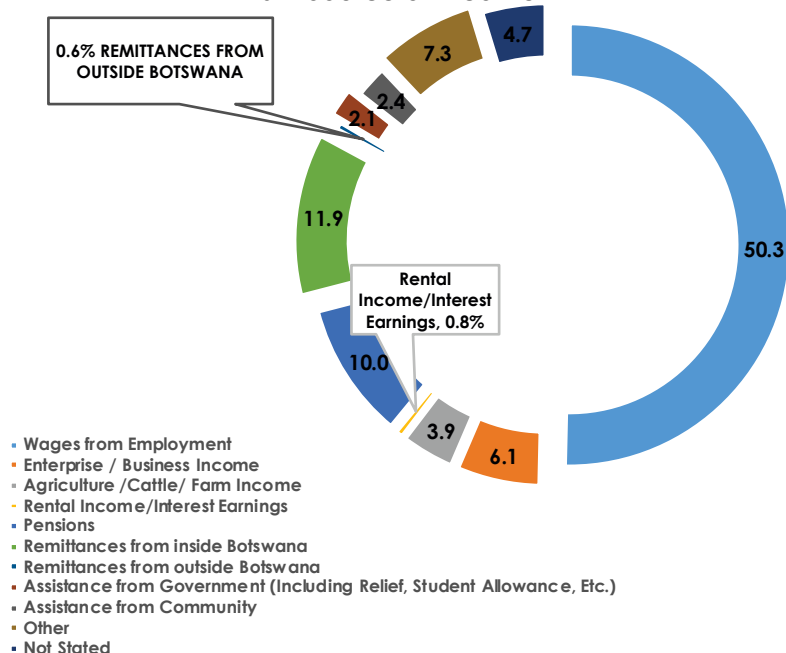

Table 6.5 T: Percentage (%) Distribution of Poor Households by Main Source of Income and Strata 2015/16

*Non formal sale of livestock

** The remaining 7% is covered by Auxiliary Agriculture work/Harvesting natural resources, Subsistence/Arable farming, Piece job/Part time and Assistance from family.

6.2.3 Poor Households by School Attendance of Head of Household

The survey showed that the proportion of the poor household heads who have attended school is increasing as the proportion of those who have not attended school decreases. The results reflect that most of the poor household heads have attended school. At national level, analysis showed that within strata 62.8% of poor household heads have attended school which is a 6.7 percentage points increase from the 56.1% observed in the 2009/10 BCWIS. Consistent with the increase in school attendance of heads of poor households is the reduction in those who have never attended school reflecting a reduction of 7.7 percentage points from the 43.6% of the BCWIS to 35.9% during the BMTHS.

The percentage distributions of school attendance within each strata shows that in cities/towns 83.5% of poor household heads have attended school and 66.7% in urban villages, while in rural areas 52.5% have attended school.

A disaggregation of household heads who have never attended school across strata shows that the highest non-attendance was in rural areas with 65.8% followed by 28.3% in urban villages and 6% in cities and towns (**Table 6.6T**).

Table 6.6 T: Poor Households by School Attendance of Head 2015/16

6.2.4 Poor Households by Training of Head of Household

The BMTHS results show that most of the poor heads of household have not attended any training. At national level, within strata analysis shows that non-attendance of training by heads of households has increased by 0.2 percentage point from 92.3% during the 2009/10 BCWIS to 92.5% in the 2015/16 BMTHS. Comparing within strata proportions, rural areas had the highest percentage of household heads with no training at 96.8% with only 2.9% who have completed training, while the lowest level of no training was in cities/towns at 77.5% along with 15.7% of those who had completed training.

Across strata analysis shows that the majority of the poor households with no training (52.4%) are located in rural areas, while smaller percentages are located in urban villages and cities/town with 31.7% and 15.9% respectively (**Table 6.7T**). Among those who were still undergoing some training, 67.7% were in urban villages while 32.3% were in cities/towns.

Table 6.7 T: Poor Households by Training Status of Head and Strata 2015/16

6.2.5 Poverty Incidence by Disability of Head of Household

The analysis of poverty incidence by disability of head of household as depicted by **figure 6.5** reflects that most of the poor household heads were not living with disability as 70.7% are recorded under "no disability" at national level. The highest percentage of disability observed at national level was on "defect in seeing" at 8.9% and the lowest rate being on "difficulty in communicating/ understanding/being understood" at 1.4% nationally.

The high percentages of no disability within strata are consistent with the national level rate, with the cities/town depicting that the majority (84.8%) of the household heads were not living with disability. The same pattern was observed within the urban villages and rural areas at 68% and 67.1% respectively (**figure 6.5**).

Figure 6.5: 2015/16 BMTHS Percentage (%) Distribution of Poor Household Heads by disability

6.2.6 Poverty Incidence by Chronic Illness of Head of Household

Table P13 in **Appendix 5**, on chronic illnesses among poor household heads shows that, Blood Pressure and HIV/AIDS were the most prevalent chronic illnesses. At national level, 17.3% of the poor household heads were reportedly having blood pressure and 15.1% had HIV/AIDS. The data shows that 59.7% of the household heads had no chronic illnesses, while 2.1% did not state their chronic illnesses. High blood pressure was observed to be more prevalent in urban villages reflected by the 22.0% of the heads, followed by rural areas with 16.2% and 12.5% in Cities/town. The HIV/AIDS prevalence was reportedly higher in rural areas at 17.6% followed by 15.3% in urban villages and cities/towns at 8.0%.

6.2.7 Poverty Incidence by Marital Status of Head of Household

The analysis of marital status for poor households shows that at national level the highest percentage being 30.3% of poor household heads have never married while 28% are living together with partners and 22.4% are married. The percentage of married poor household heads has reduced between BCWIS and the BMTHS from 26.4% to 22.4%, while the percentage of living together has increased from 20.8% to 28%. The proportion "widow/widower" has decreased between the two survey periods from 15.5% to 15.3%.

The lowest percentages observed were among the divorced and separated at 1.0% and 1.9% respectively. A comparison with the BCWIS shows that the proportion of divorced poor household heads has reduced by 1.1 percentage point from 2.1% to 1.0%.

Within the rural areas strata the highest percentage was observed under those living together at 32.2% followed by never married at 28.5% and married at 20.5%. For cities/towns and urban villages the category of never married had the highest percentages at 39.2% and 27.7% respectively (**Figure 6.6** and **Table 6.8T**).

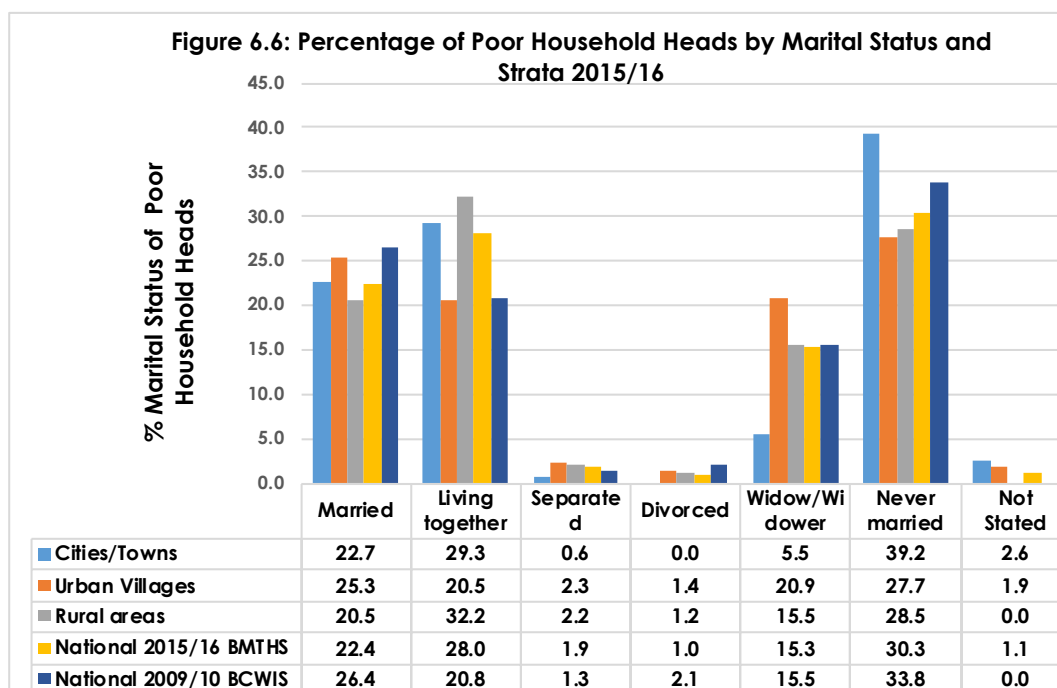

Table 6.8 T: Percentage (%) Distribution of Poor Households by Marital Status of Household Head within Strata 2015/16

Marital status	BMTHS 2015/16				BCWIS 2009/10 National
	Cities/Towns	Urban Villages	Rural areas	National	
Married	22.7	25.3	20.5	22.4	26.4
Living together	29.3	20.5	32.2	28.0	20.8
Separated	0.6	2.3	2.2	1.9	1.3
Divorced	0.0	1.4	1.2	1.0	2.1

Not Stated	2.6	1.9	0.0	1.1	0.0
Total	100.0	100.0	100.0	100.0	100.0

6.2.8 Poverty Incidence by Household Size

The national average size of poor households has increased between the BCWIS and the BMTHS from 6.2 to 6.4 members. The increase in household size has also been observed in urban villages and rural areas from 7.3 to 7.4 and 6.0 to 6.6 respectively. The Cities/Towns have recorded a reduction in the average household size from 4.3 to 4.1 members ([Table 6.9T](#)).

Table 6.9 T: Average Household Size of Poor Households by Strata 2015/16

Stratum	Average Household Size of Poor Households (2009/10 BCWIS)	Average Household Size of Poor Households (2015/16 BMTHS)	Average Household Size All Households (2015/16)
Cities/Towns	4.3	4.1	3.0
Urban Villages	7.3	7.4	3.8
Rural Areas	6.0	6.6	3.6
National	6.2	6.4	3.5

6.2.9 Social Protection Packages

The list of social protection Packages from table 6.10T consists of policies and programs that Botswana Government has designed and implement to reduce poverty and vulnerability (the list may not be exhaustive). In the social protection module of the BMTHS, the household heads were asked if any member of their households receive government assistance through any of the listed programmes.

Those who responded that they have someone in their households receiving the package were further subjected to the poverty assessment through the poverty datum line. The survey results show that out of the 177 569 households receiving at least one of the packages 22 008 (12.4%) have been assessed to be poor. Out of the total of 53 075 poor households in the survey the proportion of those receiving the packages is 41.5% (22 008 out of 53 075).

The percentage distribution of social protection packages at National level, depicts that the majority of poor households have children who are receiving the school feeding programme, as reflected by the highest percentage recorded under the school feeding programme at 71.8%. The school feeding programme is followed by the needy students' package at 6.9% and the Destitute Programme at 6.8%. Next to the Destitute Programme, 6.5% of the households were recorded to be receiving the Poverty Eradication Programme (Table 6.10T).

Table 6.10T : Percentage (%) distribution of Social Protection Packages 2015/16

Social Protection Package	Cities/ Towns	Urban Villages	Rural Areas	National
Orphan Care Programme	0.0	3.1	3.5	3.0

Total Number of Poor Households	10 045	16 445	26 586	53 075

6.3 Summary Profile of Poor Persons and Households

Out of the 16.3% poor population, the majority of the poor are in the lower age groups and are mostly dependents. Females are more affected by poverty compared to their male counterparts. The pattern prevails at household level with female headed households affected by poverty more than male headed households.

Most of the poor have attended school but not training and as a result the majority of the employed poor (working poor) are employed in elementary occupations (40.1%), followed by Service/Sales Workers with 20.3% and agriculture and fisheries workers with 23.3% (Figure 5.9) and are mostly residing in Rural Areas (48.0%).

Among the youth (15-35years) poverty appears to be more prevalent among the age group 20-24 and 25-29 respectively (27.8%, and 23.6%).

Generally, most of the poor household heads have "never married".

Chapter 7: Incomes and Expenditures of Households

This chapter presents results on incomes on household, disposable incomes, household savings, income inequalities and household consumption inequality. Income and expenditure are the indications of the living standards of people. It makes it possible to measure the purchasing power of the population and consequently whether or not it has easy access to goods and services such as housing, capital goods, foods etc.

7.1 Introduction

Concepts and definitions on what constitutes incomes, expenditure and consumption are presented in the Appendix. Obtaining income information from individuals and households is a difficult task as many people are reluctant to disclose many of them and often under report. Expenditure information is affected mostly by under reporting, particularly for items such as alcohol and tobacco. In some instances, households may under report consumption under the misconception that they would be enrolled under government assistance schemes.

Table 7.1T presents average monthly household incomes by source. The results shows that Cash Earnings accounted for most of the household incomes for both periods, at P 3,936.12 and P 4,493.80 in 2009/10 and 2015/16 respectively. Cash Earnings contributed 69.30 percent to the average Gross Income of households at the national level and they were the main contributors to average household income across strata, accounting for over 69.30 and 65.21 percent of average monthly gross household income in cities/towns and urban villages, respectively. Cash earnings' contribution to average gross household income in rural households was 69.02 percent. This pattern was also observed in 2009/10 for all strata.

Overall, the contribution of cash earnings to average household gross income has shown slight decreases in cities/towns and urban villages while rural areas recorded an increase.

School meals and Own produce contributions towards gross average household income recorded decreases between the two periods.

The results showed increases in Business Profits' contribution towards averages gross household across all strata and at national level.

Table 7.1T: Summary of Average Monthly Incomes by Source; by Strata-Pula 2015/16

Table 7.2T shows a percentage change in the average monthly incomes by source and strata between 2009/10 and 2015/16. Generally, there has been 6.4% increase in the gross income between the two survey periods.

7. 2 Household Disposable Incomes & Income Distribution

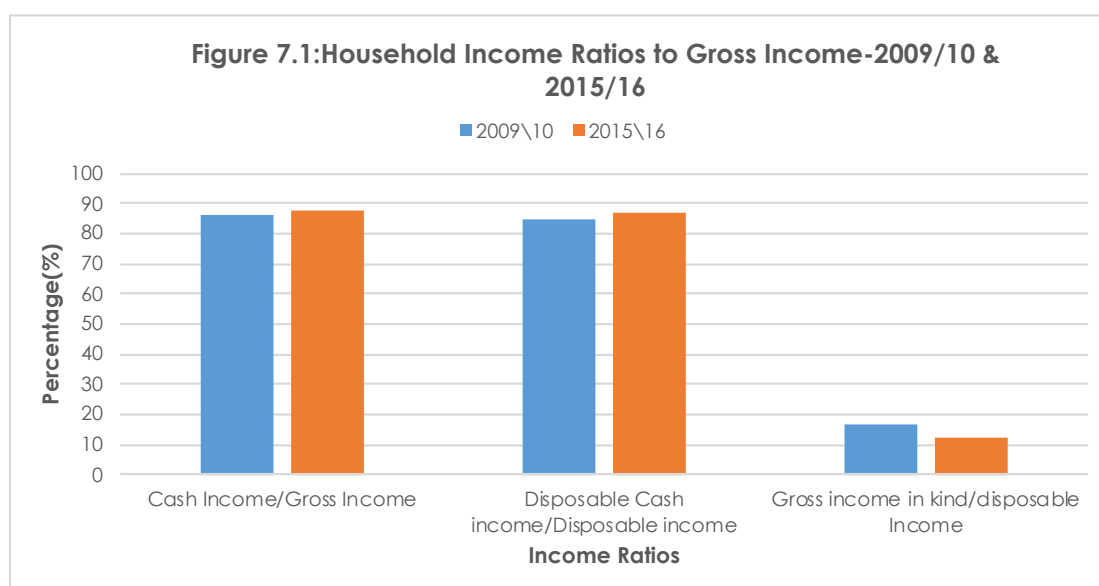

The 2015/16 BCWIS results estimated the average household disposable income at P5, 836.37 up from P5,304.49 estimated from the 2009/10 HIES.

For cities/towns, urban villages and rural areas mean disposable incomes per household were respectively estimated at P9, 630.41, P5,731.47 and P3,250.84. The cities/towns and urban villages ratios of cash income to gross income recorded a decrease of 2.4 and 1.6 respectively while rural areas recorded an increase of 10.4 between 2009/10 and 2015/16. An increase in the ratio of cash income to gross income were accompanied by decrease in gross income in-kind as shown

by the decrease in the ratio of gross income in-kind to disposable income, which decreased from 16.3 to 12.2 percent at national level between 2009/10 and 2015/16. The results are summarized in **Table 7.3T**.

Table 7.3T: Average Monthly Household Incomes by Strata – Pula 2015/16

Income Aggregates	2009/10.				2015/16.			
	Cities/ Towns	Urban Villages	Rural	National	Cities/ Towns	Urban Villages	Rural	National

7.3 Household Savings and Current Outlays

Households savings or propensity to save was estimated by summing households' contributions to pensions and investment, which included deposits to savings and investment in shares

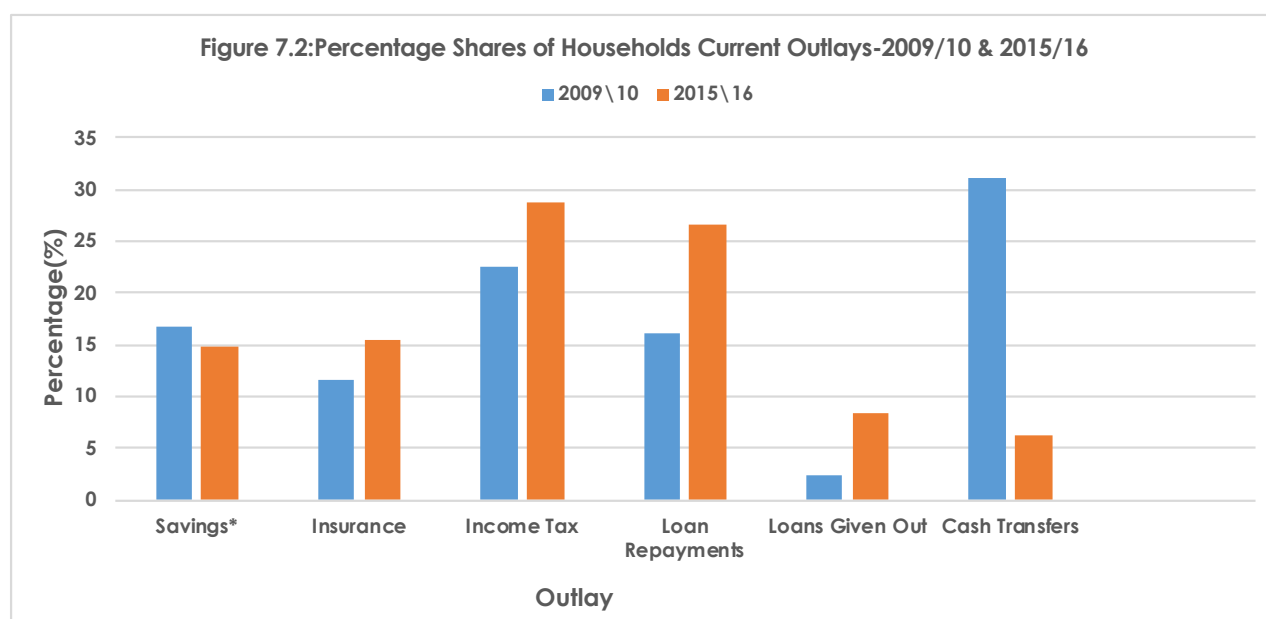

Table 7.4T shows that at the national level, there was a decline in the households' propensity to save as shown by decline in the ratio of savings to total household current outlays. The ratio decreased from 16.72 percent in 2009/10 to 14.74percent in 2015/16.

The results further indicated increases in average insurance contributions, income tax and loan repayment, accompanied by a decrease in cash transfers out of households. **Figure 7.2** presents the results graphically.

Table 7.4T : Household Average Other Current Cash Outlays

Other Current Cash Outlays	2009/10				2015/16			
	Cities/ Towns	Urban Villages	Rural	National	Cities/ Towns	Urban Villages	Rural	National

Note: * Savings refers to sum of pension contributions and investments

7.4 Household Income Inequalities

Income inequality is measured using the GINI coefficient, which summarizes income/consumption inequality in a single figure. The GINI coefficient ranges between one (1) and zero (0). When it is equal to one (1), it means there is complete inequality, while when it is equal to zero (0) it means there is complete equality.

To get the details of income/consumption inequality, the Lorenz curve is used. The Lorenz curve plots the percentage cumulative distributions of income/consumption and households against each other. The 45 degrees diagonal line represents a situation of complete equality. Complete equality would mean that, for instance, 10.0 percent of households would get their corresponding

10.0 percent of income. In the case of complete equality, the Lorenz curve would be one and the same as the 45 degrees diagonal. With inequality, the Lorenz curve would be below the 45 degrees diagonal. The space between the 45 degrees diagonal and the plotted Lorenz curve depicts the extent of inequality. The GINI coefficient is derived by dividing the area between the 45 degrees diagonal and the Lorenz curve with the total area of the triangle below the 45 degrees diagonal. The Lorenz curve depicting consumption inequality is plotted in [Figure 7.4](#).

The 2015/16 BMTHS results indicated that income inequality, bearing in mind the difficulties in obtaining accurate information from respondents, has slightly increased between 2009/010 and 2015/16.

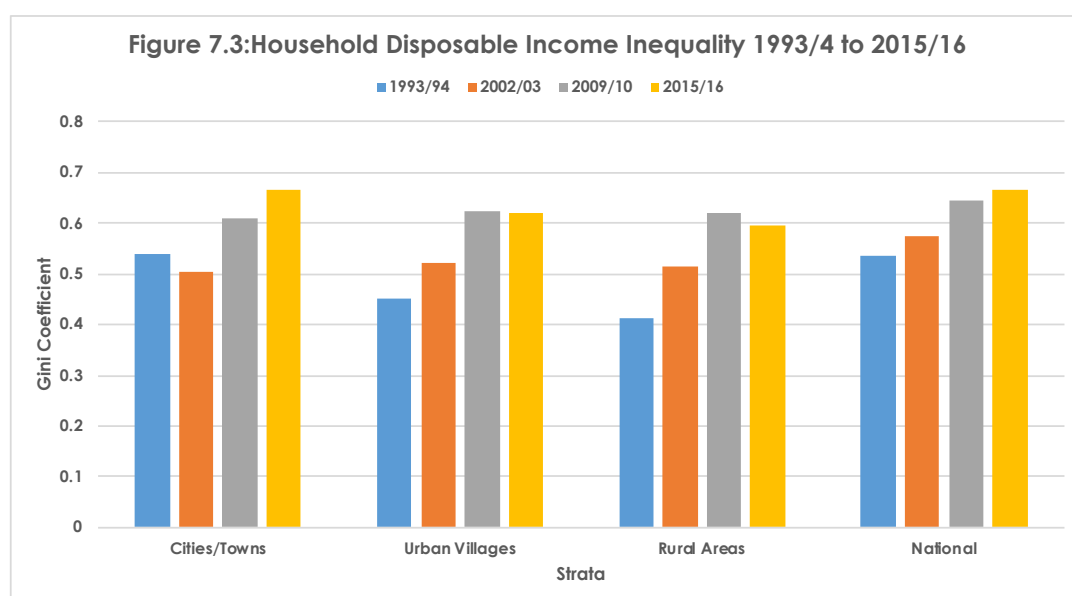

The increase in household disposable incomes inequality was more pronounced in cities/towns, where the GINI coefficient increased from 0.608 to 0.667, recording an increase of 0.059 GINI points. While in rural areas it showed a decrease from 0.621 to 0.597. At the national level, inequality in disposable income increased from 0.645 in 2009/10 to 0.666 in 2015/16.

Inequality of households disposable cash incomes also recorded increases between 2009/10 and 2015/16, with the cities/towns again recording the highest increase, of 0.067 GINI points, moving from 0.619 in 2009/10 to 0.685 in 2015/16, as indicated in [Table 7.5T](#). As in the case of disposable income, the rural areas disposable cash income inequality decreased from 0.757 to 0.698.

[Figure 7.3](#) is a graphical presentation of household disposable income inequality for the periods 1993/94 to 2015/16, indicating a slight increase in income inequality across strata.

Table 7.5T Income GINI Coefficients (1993/94, 2002/03, 2009/2010, 2015/16)

Strata	Disposable Income				Disposable Cash Income			
	Gini Coefficients				Gini Coefficients			
	1993/94	2002/03	2009/10	2015/16	1993/4	2002/03	2009/10	2015/16
Cities/Towns	0.539	0.503	0.608	0.667	0.548	0.513	0.619	0.685
Urban Villages	0.451	0.523	0.625	0.620	0.552	0.552	0.671	0.657
Rural Areas	0.414	0.515	0.621	0.597	0.599	0.622	0.757	0.698
National	0.537	0.573	0.645	0.666	0.638	0.626	0.715	0.715

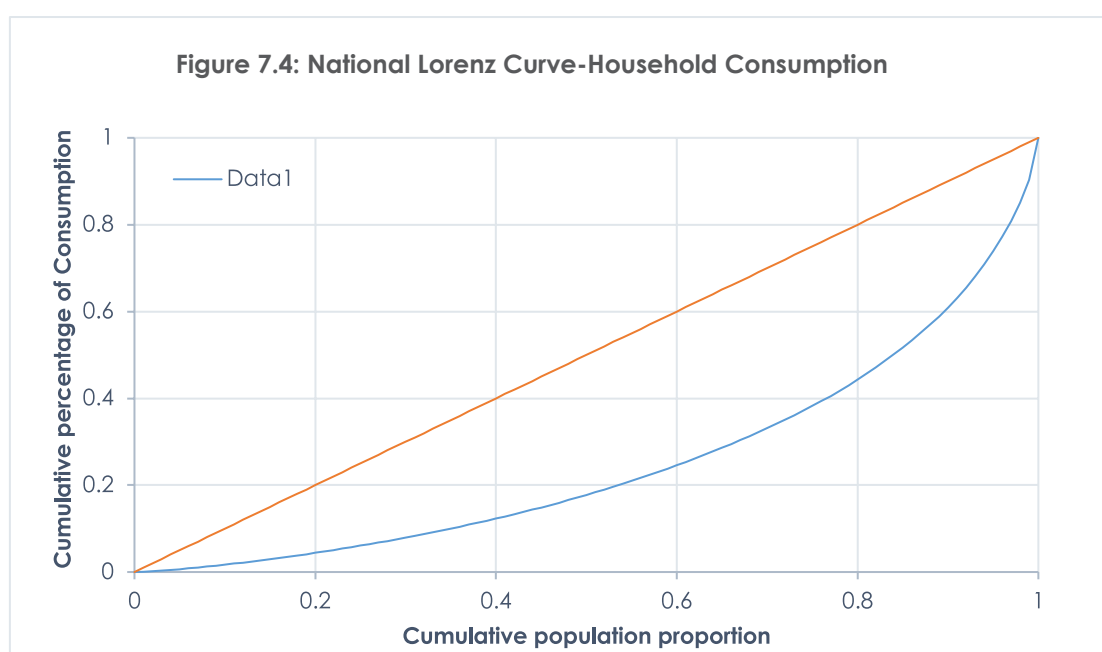

7.5 Household Consumption Inequality

Households inequality observed through income is high and susceptible to inaccuracy as a result of difficulties experienced in reporting income by the respondents. Comparatively, Information on consumption is more reliable. Inequality measured using the consumption aggregate revealed lower GINI coefficients (compared to income inequality). The results are presented in **Table 7.6T**.

Table 7.6T Consumption GINI Coefficients (2002/03, 2009/2010, 2015/16)

Strata	Gini Coefficients		
	2002/03	2009/10	2015/16
Urban Area	0.550	0.510	0.518
Rural Areas	0.505	0.438	0.474
National	0.571	0.495	0.522

The results showed an increase in consumption inequality from 0.495 in 2009/10 to 0.522 in 2015/16 at national level. A slight increase was observed in urban areas from 0.510 in 2009/10 to 0.518 in 2015/16 while rural areas inequality increased from 0.438 in 2009/10 to 0.474 in 2015/16.

7.6 Average Household Expenditure by Consumption Item and Other Outlays-Pula

This section presents average monthly household consumption expenditures of households on goods and services.

Table 7.7T compares average monthly household expenditures for 12 commodities & services groupings. The results showed that there was an overall increase in average household final consumption expenditure from P3 045, 93 in 2009/10 to 3,926.63 in 2015/16.

Table 7.8T presents expenditure shares by commodity groups for 2009/10 and 2015/16. At national level, the share allocated to food decreased from 17.7 percent in 2009/10 to 12.8 percent in 2015/16. The highest expenditure share was allocated transport, increasing from 20.7 percent in 2009/10 to 23.9 percent in 2015/16. At national level, there has been a change in order of importance, with transport, housing and food being allocated the highest shares of 23.9, 17.8 and 12.8 percent of the consumption expenditure budget in 2015/16, while for BCWIS, the highest shares were allocated to Transport, food and housing with 20.7, 17.7 and 13.6 respectively. According to Engel's Law, as households incomes improve, the budget allocation shifts such that

the budget allocated to food becomes smaller as households spend more on “luxury” goods.

Across strata, average household expenditure shares on food, showed a decreasing trend with urbanization, with rural villages' average expenditure being highest compared to that of cities/towns' (8.0%) and urban villages (12.8%) households. Average households' expenditure on housing increased with urbanization, with cities/towns and urban villages, average expenditure on housing at 19.7 and 18.8 percent respectively and that of rural villages at 12.4 percent.

7.7 Self-Assessed Well-Being and Food Insecurity

Self-assessed Poverty module was administered to capture the household's experiences and own assessment of their poverty status. The household members were asked to rank themselves regarding whether they considered themselves poor or not relative to other households in the same communities. This was done through a series of questions including the amount of income they considered to be the absolute minimum required to meet the household's basic needs.

7.7.1 Absolute Minimum Income Required

Table 7.9 T show how households compare their current income to the absolute minimum to meet the household's basic needs. It compares the BCWIS 2009/10 with the BMTHS15/16 results. The majority of the households in the two survey periods, considered their income to be less than the absolute minimum, 46.1% during the BCWIS and 61.6% during the BMTHS. In general more than 50% of the households in BMTHS15/16 felt that their current incomes were below the absolute minimum across strata while in the BCWIS above 50% rate was only in the rural areas with 53% and the rest were below 50%.

Table 7.9 T: Percentage of Households Consideration of Current Income Compared with the Absolute Minimum Required.

STRATA	2009/10 BCWIS				2015/16 BMTHS			
	Less	Same	Greater	Total	Less	Same	Greater	Total
Cities/Towns	36.1	15.1	48.4	100.0	52.8	18.5	28.6	100.0
Urban Villages	44.5	14.3	41.2	100.0	61.4	16.8	21.8	100.0
Rural Areas	53.5	19.6	26.9	100.0	68.1	17.4	14.4	100.0
National	46.1	16.8	37.1	100.0	61.6	17.4	20.9	100.0

7.7.2 Food Insecurity

Food Insecurity exists when people lack sustainable physical or economic access to enough safe, nutritious, and socially acceptable food for a healthy and productive life. Food Insecurity may be chronic, seasonal, or temporary. To capture Food Insecurity, a module was included in the BMTHS 2015/16 which had questions that were in line with those framed by the Food and Agriculture Organization (FAO) of the United Nations. About 50% of the households in rural areas were worried about not having **enough** food during the two survey periods as reflected in **Table 7.10 T**.

Table 7.10 T: Percentage of Households Who Worry About not Having Enough Food

STRATA	2009/10 BCWIS	2015/16 BMTHS
	Yes	Yes
Cities /Towns	28.8	25.5
Urban Villages	42.8	37.5
Rural Areas	50.6	50.2

7.7.3 Proportion that worry about not having food.

The proportion of households that often worried about not having food, that is, more than 10 times in the past four weeks, have shown a 3.7 percentage points increase between 2009/10 BCWIS and 2015/16 BMTHS, from 12.7% to 16.4% at national level. The increases were observed in all strata (**Table 7.11 T**).

7.7.4 Percentage of Households' Own Description of Living Conditions Compared to Other Households

Under living conditions section of the module, households were asked to compare themselves with households in their community on whether on average, their living conditions were better than the rest of households in the community or not.

Table 7.12 T shows that households in general, when enquired about their living conditions compared to others, revealed that their living conditions were about average compared to others. The trend is evident in both 2009/10 BCWIS and 2015/16 BMTHS with 52.9% and 57.3% respectively.

Definition of Terms and Concepts

Cash Earnings

This is earned cash income from regular employment and irregular work. It includes gross wages and salaries, back pays, bonuses, overtime payments and allowances. Also included are annual earnings (estimated to monthly equivalent), income tax refunds and money earned from outside the country which is used domestically.

Own Produce Consumed

Own produce consumed covers goods acquired by hunting, fishing, gathering and rearing which are consumed by the household. Services generated and used to benefit household are also included under own produce.

Wages In-kind

Included under wages in-kind are goods received in lieu of cash wages, and costs of goods, services, utilities provided free (and paid directly) by the employer.

Unearned Income

Unearned income refers to incomes received by household members not from sale of labour or entrepreneurship. Included under unearned income are incomes for pension or annuity, Old age pension, War veteran pensions, bonus payments from co-operatives, student allowances, incomes from house or property (for which income tax is not paid). This income could be in cash or in-kind.

Household Receipts

This refers to cash and non-cash income received by households, excluding earned and unearned income. These could be cash or goods gifts from other households in or outside the country. These are largely transfers from other households in the form of cash or goods/services.

Cash Given Out

Included under cash given out are transfers out of the household to other households as gifts.

Other Outgoings

These include non-cash transfers from the household

Aid

Aid refers to goods received under Government aid programmes, such as drought relief, rations for orphans and the elderly. Food aid from other institutions is also included under aid.

School Meals

These are meals given to pupils and students in primary and secondary schools under government's school feeding program.

Gross Cash Income

This is the sum of Cash Earnings, Business Profits, Unearned Cash Income and Cash receipts.

Gross Income

Cash Income (Gross) **plus** Wages In Kind **plus** Gifts Received plus Own Produce consumed **plus** Aid **plus** School meals

Earned Income

Cash Earnings plus Wages in Kind plus Business Profits

Disposable Cash Income

Cash Income minus Cash Given out, and less Income tax.

Disposable Income

Disposable Cash Income plus Gifts Received plus Own Produce consumed plus Wages In Kind plus Aid plus School meals minus Gifts Given Out.

Cash Consumption Expenditure

This refers to household cash purchases of goods and services.

Consumption Expenditure In-Kind

Covered under in-kind consumption expenditure are goods and services acquired by households through giving out goods/services instead of cash.

Total Consumption

Consumption Expenditure (cash) plus Consumption Expenditure (in kind) plus Wages In Kind plus Gifts Received plus Own Produce Consumed plus Aid plus School meals minus Gifts Given Out.

Economically Active Population

Economically Active Population refers to the combination of the employed and unemployed Population, it is also called Population in the Labour Force. This provides a measure of the number of persons providing and ready to supply labour for the production of goods and services at a given point in time.

Employed Persons

Persons who did some work in the reference period either for payment in cash or kind (paid employees) or who were in self-employment for profit or family gain, plus persons temporarily absent from these activities but definitely going to return to them (e.g. on leave or sick). So generally the above statement means that there are 2 types of persons involved in employment, being:-

- Employed, at work: Worked for pay or profit for at least 1 hour
- Employed, not at work: Worked already in the job, but not at work due to: Working time arrangement (shift work, flexi time) temporary absence (expects to return within short period).

Unemployed Persons

The unemployed persons or population can be described as all persons in the working age group

15 and above whom during a specified short reference period (30 days) were seeking and also being available for work. Generally Unemployed persons are defined as working age persons who were:

- Not employed in last 7 days / reference week but available to work.
- Carried out activities to seek employment in last 4 weeks / reference month
- Available to start job/business in reference week OR in short period

Currently Not Economically Active (Population Outside Labour Force)

The economically inactive population comprises all persons who were neither “employed” nor “unemployed” during the short reference period (7 days), used to measure “current activity”. This population is split into four groups:

- Attendant at educational institutions;
- Retired;
- Engaged in family duties;
- Other economically inactive.

Unemployed

The persons who are unemployed are the ones who were not only available for work but had taken active steps to find work in the last 30 days.

Discouraged Job Seekers

Discouraged Job Seekers are persons currently unemployed who have not taken active steps to find work due to different reasons in the last 30 days but they are available to work.

Temporary absences from employment

This refers to persons not working in the reference period but having work from which they are temporarily absent. Such a person is included in the employed population provided they keep a strong attachment to the job and there is a definite expectation he/she will return to it. The most common categories are persons on leave from a wage job.

Usually Employed - Persons who were usually employed are those who in the previous 6 or more months in the last 12 months were employed, but also who currently are not employed.

Usual Economic Activity

This is the economic activity done in reference to the long term period of time, usually referred to the previous 12 months.

Current Economic Activity

This is the economic activity done in reference to the short period of time, usually referred to the previous 7 days

Paid Employees are persons who during the reference week performed some work for a wage or salary in cash or kind or were temporarily absent from such work. Permanent, temporary and casual paid employees were also included.

Self Employed are persons who during the reference week performed some work for profit or family gain or were temporarily absent from such work. This includes small and large business

people working on their own enterprises. The category can be sub-divided into self-employment with or without employees.

Central Government - Refers to persons working for all Central Government. This includes all Teachers in Government Primary and Secondary schools (including community secondary schools) plus food stampers and night watchmen in schools.

Local Government - Includes persons working for District and Urban Councils. There are a few pre-schools under Local Government.

Ipelegeng - Persons employed on drought relief projects which mostly are under Local Government.

Parastatals - includes the wide range of enterprises owned at least 50% by the government, either profit making or non-profit making.

Informal Sector - According to the definitions, an establishment/unit qualified to be of an informal activity if it satisfied the following criteria:-

- Not registered as a company
- Not registered with professional association
- Less than 5 employees
- Informal accounts or none
- Expenditure not easily distinguishable from household expenditure
- Employees casually hired
- Often temporary or mobile or in owner's home/plot

Other Private - includes persons working for other enterprises not included above. This is broadly often called the private formal sector. It should be noted that persons working for NGOs are also included in this group.

Occupation

Occupation covers duties that a person performs most of the time when that person is at work. The person's occupation depends on the tasks and duties which that person performs.

Industry

Industry tries to cover the main kind of product produced or the main service provided by the company or the work unit of an individual.
