Agricultural Survey [ag/oth]

ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). Data was collected through computer-assisted telephone interviews between 22 September and 31 October 2022, all 11 provinces were covered. Between 150 and 260 households were sampled per province. Of the total sampled households, 70 percent were agricultural with comparable shares among panel households (77 percent). Sampling weights were computed for the population per administrative level 1. access to electricity as a wealth proxy and education levels were used for sampling weights per administrative level 1.

Sampling

SAMPLING PROCEDURE

Statistical representativeness at administrative level 1 (province level), the sample covered all 11 provinces of the country. This fourth round survey employed panel data, stratified simple random sample and random digit dialing approaches, reaching 1 956 households. Of these, approximately 71 percent were panel households re-interviewed from previous rounds. Between 150 and 260 households were sampled per province. Of the total sampled households, 70 percent were agricultural with comparable shares among panel households (77 percent).

WEIGHTING

Sampling weights were computed to account for the disproportionate probabilities of the selection of the population per administrative level 1. Population figures at administrative level 1, the proportion of agricultural households at administrative level 1, access to electricity as a wealth proxy and education levels were used for sampling weights.
