SUBTITLE
Violence Against Women

COUNTRY

Name	Country code
Cambodia	KHM

STUDY TYPE
World Health Survey [hh/whs]

ABSTRACT
Violence against women (VAW), in its many forms and manifestations, and across all settings, is a violation of human rights and fundamental freedoms. Around the world, many women experience violence regardless of age, class, race and ethnicity. Most of this violence is driven by the fact that they are women, and related to gender roles in society. Violence against women is predominately perpetrated by men, and most often by intimate partners. According to most recent global estimates, 35% of women aged 15 years or older globally have experienced physical and/or sexual violence during their lifetime (Devries et al., 2013; WHO, 2013). Intimate partner violence is the leading cause of homicide in women globally (Stockl et al., 2013) and has many other major short- and long-term health consequences (WHO, 2013). The economic and social costs associated with VAW are significant, and global evidence shows that violence consistently undermines development efforts at various levels, affecting physical, human and social capital (WHO, 2005). In Cambodia, the state of research on violence against women points toward widespread experiences of violence across the country (CDHS, 2012; Fulu et al., 21013). Women of all cultures and classes are subjected to many forms of physical, psychological, sexual and economic violence. This includes, but is not limited to intimate partner violence (IPV), rape and sexual assault, sexual harassment, acid violence and trafficking (MoWA, 2008). The Royal Government of Cambodia (RGC) has made a strong commitment to addressing violence against women by introducing a number of legislative and policy reforms including domestic violence legislation and a national action plan. Cambodia has demonstrated its strong commitment to promoting gender equality and ending VAW by ratifying several core international human rights conventions. In addition, there is widespread recognition among Cambodian government leaders that having quality data on the prevalence and health and other consequences of different forms of VAW is essential to increase awareness, inform evidencebased programming and policies, including the NAPVAW, and to monitor progress in the implementations of such interventions. Between 2014-2015, to fill the identified knowledge gaps, the Royal Government of Cambodia with support from the World Health Organization (WHO) and UN Women conducted a national prevalence study using the WHO multicountry study methodology. This methodology was selected because it has been widely used and is known to produce reliable data, that can be used for cross-country comparisons, and it adheres to internationally recognized ethical and safety standards.

Specific Objectives:
Among specific objectives, the following deserve special mention:

ESTIMATE THE PREVALENCE AND FREQUENCY of different forms of VAW: physical, sexual, emotional and economic violence against women by intimate partners, as well as sexual and physical violence by perpetrators other than partners (in this document also referred to as 'nonpartners') since the age of 15, and sexual violence before the age of 15;

DETERMINE THE ASSOCIATION of physical and/or sexual intimate partner violence with a range of health and other outcomes;

IDENTIFY FACTORS that may be associated with either reducing (protective factors) or increasing (risk factors) women's risk of hysical and/or sexual intimate partner violence; DOCUMENT THE STRATEGIES and services that women use to cope with violence by an intimate partner.

INCREASE NATIONAL CAPACITY and collaboration among researchers and women's organisations working on domestic violence;

INCREASE AWARENESS about and sensitivity to partner violence among researchers, policymakers and health care providers;

CONTRIBUTE TO THE DEVELOPMENT of a network of people committed to addressing

KIND OF DATA
Sample survey data [ssd]

UNIT OF ANALYSIS
- Households
- Individuals

Scope

NOTES
ESTIMATE THE PREVALENCE AND FREQUENCY of different forms of VAW: physical, sexual, emotional and economic violence against women by intimate partners, as well as sexual and physical violence by perpetrators other than partners (in this document also referred to as 'nonpartners') since the age of 15, and sexual violence before the age of 15;

DETERMINE THE ASSOCIATION of physical and/or sexual intimate partner violence with a range of health and other outcomes;
IDENTIFY FACTORS that may be associated with either reducing (protective factors) or increasing (risk factors) women's risk of physical and/or sexual intimate partner violence;
DOCUMENT THE STRATEGIES and services that women use to cope with violence by an intimate partner.
INCREASE NATIONAL CAPACITY and collaboration among researchers and women's organisations working on domestic violence;
INCREASE AWARENESS about and sensitivity to partner violence among researchers, policymakers and health care providers;
CONTRIBUTE TO THE DEVELOPMENT of a network of people committed to addressing violence against women.

Sampling

SAMPLING PROCEDURE
- The survey sample design was developed by the NIS in the Ministry of Planning. A multi-stage sampling strategy was used based on a sampling frame that took into consideration the 24 provinces in the country delineated into a total of 225 districts for a total of 14,172 "villages" or 28,701 enumeration areas (EAs) in the country. The sample is self-weighted at the household level.

- The results achieved on VAW 2015 sampling design is already completed and describes as follows:
a.Two level of survey results will be produces as: first at National level and second sub-national (Urban and Rural)
b.Survey methods of VAW 2015 were designed bases on the three- stage stratified cluster sampling.
b1. First stage: selected the sample Enumeration area consisting of 200 sample EAs
b2. Second stage: selected the sample households consisting of 4,000 households
b3. Selected the sample Women consisting of 4,000 eligible women

RESPONSE RATE
Eligible woman response rate: 98%
Household response rate: 99.5%
Household refused: 0.5%

WEIGHTING
The sampling weight for each household in ith EA of stratum h is the inverse of its overall selection probability of one and two stages:
$W_{hij}=1(P_{hi} \times P_{hij})$
The sampling weight for individual women in each sample household in ith EA of stratum h is the inverse of its overall selection probability of all stages:

$W_{hij}=1(P_{hi} \times P_{hij} \times P_{hijk})$

Sampling weights will be adjusted for household non- response and as well as for individual nonresponse in order to get the survey weights. A spreadsheet containing all sampling parameters and selection probabilities will be prepared to facilitate the calculation of survey weights. Several sets of survey weight will be calculated:
- Individual women weight
- Households weight
The differences between the household weights and the women weights are introduced by individual non-response. The violence against women weight takes the number of eligible women in the household into account because of the selection of only one woman per household. The final survey weights will be normalized in order to give the total number of unweighted cases equal to the total number of weighted cases at national level.

Note:
P1hi: first-stage sampling probability of the ith EA in stratum h
P2hij: second -stage sampling probability of the jth sample household in ith EA in stratum h
P3hijk: third -stage sampling probability of the kth sample women in jth sample household in ith EA in stratum h

DATA COLLECTION MODE
Face-to-face [f2f]

DATA COLLECTION NOTES
The National Study on Women's Health and Life Experiences was coordinated by WHO in collaboration with MoWA, and UN Women Cambodia's Ending Violence Against Women Program, through funding from the Australian Government's Department of Foreign Affairs and Trade. The research was carried out with the assistance of the Ministry of Planning's NIS. Data collection took place in 2015.

A Steering Committee and technical working groups composed of key partners from the government, the UN, NGO's, and development partners provided guidance to the process and helped to ensure that the results were disseminated and applied to future policy and programmatic decision making. The Steering Committee was managed by MoWA.

Teams composed of women were formed of different sizes (proportional to sample size in the area they had to cover). Each team had one supervisor, and were accompanied by a driver. Women were interviewed in their households in private, using the adapted WHO standardized questionnaire instrument and methodology. The fieldwork took place from February 2015 to June 2015, including the household listing and mapping. Data collection took approximately more than 6 weeks during April to June 2015.

data_processing

DATA EDITING
The questionnaire was programmed into electronic format using CAPI software, which allowed interviewers to enter the responses to questions directly into the electronic devises that were uploaded on a daily basis. Data entry was therefore not required. The software directly checked internal consistency, range and error checking, and skip patterns of the responses at the point of entering the answers during the interview. The uploaded files were aggregated at a central level and were immediately available for data analysis.

data_appraisal

ESTIMATES OF SAMPLING ERROR
Sample size calculations:
Z (95% Confidence Interval), the value of 1.96
P = 30%. In many countries were data are available, lifetime intimate partner sexual violence often reaches 25-30% and lifetime intimate partner physical violence is 65-70%. In a normal distribution the highest variance for a factor would be at the 50%
level (resulting in needing a very large sample) and the lowest variance would be at the extremes (needing the smallest sample). We compromise at 30% which is identical to assuming 70% so the resulting sample size is large, but not unmanageable.
DEFF = 2. We have used this value for all the national surveys, to date.
E = 0.02291. We calculate the sample size using margin of error 2.291%.

The sample size results are as follow:
Confidence Level :1.96
Margin of Error (MOE): 0.02291
Baseline levels of the indicator: 0.3
Design effect (Deff): 2
Sample size (n) - Female: 3,074

CONFIDENTIALITY

All information collected in the survey from village leaders and other representatives of sample villages and from sample households will be treated as strictly confidential and used for statistical purposes in social and economic planning. Information supplied by any person will not be used against him for taxation, investigation or any other legal purpose.

ACCESS CONDITIONS

1. The data and other materials will not be redistributed or sold to other individuals, institutions, or organizations without the written agreement of the National Institute of Statistics.

2. The data will be used for statistical and scientific research purposes only. They will be used solely for reporting of aggregated information, and not for investigation of specific individuals or organizations.

3. No attempt will be made to re-identify respondents, and no use will be made of the identity of any person or establishment discovered inadvertently. Any such discovery would immediately be reported to the National Institute of Statistics.

4. No attempt will be made to produce links among datasets provided by the National Institute of Statistics, or among data from the National Institute of Statistics and other datasets that could identify individuals or organizations.

5. Any books, articles, conference papers, theses, dissertations, reports, or other publications that employ data obtained from the National Institute of Statistics will cite the source of data in accordance with the Citation Requirement provided with each dataset.

6. An electronic copy of all reports and publications based on the requested data will be sent to the National Institute of Statistics.

Questionnaire on Women's health and life experiences

title	Questionnaire on Women's health and life experiences
authors	Ministry of Women's Affairs (MoWA) National Institue of Statistics (NIS) , UN WOMEN World Health Organization (WHO)
date	2015-02-25
country	Cambodia
publishers	Ministry of Women's Affairs (MoWA)
description	This questionnaire was developed by Dr Henrica A.F.M. Jansen (WHO, Geneva) and Dr Charlotte Watts (London School of Hygiene and Tropical Medicine, UK) with input from other members of the Core Research Team: Dr Mary Ellsberg and Lori Heise (Program for Appropriate Technology in Health, Washington DC), and Dr Claudia García-Moreno (WHO Geneva) for the WHO multi-country study on women's health and domestic violence. Early drafts of the questionnaire were reviewed by the following members of the study expert steering committee: Jacquelyn Campbell, Johns Hopkins University; LucienneGillioz, Bureau d'Egalite, Geneva; Rachel Jewkes, Medical Research Council; South Africa; Ivy Josiah, Women's Aid Organisation, Malaysia. Further there were inputs from experts in the different areas covered in the questionnaire.
