Sampling

SAMPLING PROCEDURE

The 2014 Brunei Darussalam GSHS was a school-based survey of students in , which are typically attended by students aged 13 - 17 years. A two-stage cluster sample design was used to produce data representative of all students in in Brunei Darussalam. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

RESPONSE RATE

The school response rate was 100%, the student response rate was 65%, and the overall response rate was 65%.

WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3.$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting each school

W2 - The inverse of the probability of selecting each classroom

f1 - A school-level non response adjustment factor

f2 - A student-level non response adjustment factor calculated by classroom

f3 - A post stratification adjustment factor calculated by sex within grade
