TITLE

Covid-19 Follow-up Survey 2020

COUNTRY

Name	Country code
Moldova	MDA

SERIES INFORMATION

The baseline for Moldova contains a total of 360 interviews conducted from April 2019 through November 2019. The follow-up data can be merged with the baseline data using variable idstd. The follow-up surveys re-contact all establishments sampled in the standard ES. The dataset contains all observations from the standard ES with the variable eligibilitycode which indicates the outcome after attempting to reach the corresponding firm. Reference to last completed month in data : April. For more information regarding COVID-19 Follow-up surveys, visit <https://www.enterprisesurveys.org/en/covid-19>

ABSTRACT

As part of the efforts of the World Bank to understand the impact of COVID-19 on the private sector, the Enterprise Analysis unit is conducting a series of follow-up surveys in several countries. These short surveys follow the baseline provided by a recent standard Enterprise Survey (ES) and are designed to provide quick and punctual information on the impact and adjustments Covid-19 has brought about in the private sector.

Sampling

SAMPLING PROCEDURE

The sampling strategy involves re-contacting all establishments, sampled in the standard ES using stratified random sampling. The total sample target was 360. Sample Frame Source : Completed interviews in the Moldova 2019 ES. For more information on sampling methodology, see https://www.enterprisesurveys.org/content/dam/enterprisesurveys/documents/methodology/Sampling_Note.pdf

WEIGHTING

The data is representative of the universe of the baseline. The dataset contains three weights variables. The baseline weights are denoted wmedian_ES which are used to compute the indicators on the baseline. To account for non-response due to refusals in the follow-up, Sampling weights are adjusted by cell of Stratification (combination of size, sector, and location). The resulting variable wmedian_COVID, recommended to be used for analysis, assumes unobtainable businesses have discontinued and is used for computing indicators. Resulting variable wweak_COVID assumes unobtainable businesses continue to exist. Confirmed exits are administered a short questionnaire which is also available in the dataset. Figure 1 of the survey report reflects the outcome of attempting to complete the entire sample from the baseline.
