Sampling

SAMPLING PROCEDURE
The 2015 Oman GSHS was a school-based survey of students in Grades 8-12, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in Grades 8-12 in Oman.

At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

RESPONSE RATE
The school response rate was 98%, the student response rate was 94%, and the overall response rate was 92%.

WEIGHTING
The weighting formula used is:
$W = W_1 * W_2 * f_1 * f_2 * f_3$.
The list below shows what each variable in the formula represents.
W_1 - The inverse of the probability of selecting each school
W_2 - The inverse of the probability of selecting each classroom
f_1 - A school-level non response adjustment factor
f_2 - A student-level non response adjustment factor calculated by classroom
f_3 - A post stratification adjustment factor calculated by sex within grade
