## SAMPLING PROCEDURE

The 2011 Philippines GSHS was a school-based survey of students in grades 1st-4th. A two-stage cluster sample design was used to produce data representative of all students in grades 1st-4th in Philippines. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate

#### RESPONSE RATE

National: The school response rate was 97%, the student response rate was 84%, and the overall response rate was 82%.  
Luzon: The school response rate was 100%, the student response rate was 86%, and the overall response rate was 86%.  
Mindanao: The school response rate was 96%, the student response rate was 83%, and the overall response rate was 79%.  
Visayas: The school response rate was 96%, the student response rate was 84%, and the overall response rate was 81%.

#### WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3.$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting each school

W2 - The inverse of the probability of selecting each classroom

f1 - A school-level non response adjustment factor

f2 - A student-level non response adjustment factor calculated by classroom

f3 - A post stratification adjustment factor calculated by sex within grade
