Identification

SURVEY ID NUMBER
BGD_2022_COVIDIE_v02_M

TITLE
The Effect of the COVID-19 Pandemic on Children's Development and Nutritional Status at Age 20 Months in Rural Bangladesh, 2022

ABBREVIATION OR ACRONYM
COVIDIE 2022

COUNTRY

Name	Country code
Bangladesh	BGD

STUDY TYPE
1-2-3 Survey, phase 2 [hh/123-2]

ABSTRACT
This dataset, in combination with third-party data, was used to estimate the impact of the COVID-19 pandemic on the cognitive, language, and motor development, behavior, and growth among toddlers in rural Bangladesh. The study compared repeated cross-sectional surveys of children living in the same villages. The first survey (third party data) included 20-month-old children in 2019 and 2020 (unexposed group). The second survey (this dataset) took place in a random subset of 50 of the same villages in 2022 among 20-month-old children, who had experienced pandemic-related lockdowns from approximately mid-gestation through their first year (exposed group). Both surveys used similar inclusion criteria and the same developmental assessments (Bayley's Scales of Infant and Toddler Development), behavior observations, and field protocols.

KIND OF DATA
Sample survey data [ssd]

UNIT OF ANALYSIS
Child

Version

VERSION DESCRIPTION
Version 16: Edited, anonymized dataset for public distribution.

VERSION DATE
2024-09-03

VERSION NOTES
This version of the data contains only the information for 2022 (post-COVID) recollection.

Coverage

GEOGRAPHIC COVERAGE
The survey covered 112 villages in Bangladesh

Sampling

SAMPLING PROCEDURE

The 2022 sample was collected from a set of 50 villages randomly sampled from all 112 villages included in an earlier iron supplementation trial (Pasricha et al, New England Journal of Medicine, DOI: 10.1056/NEJMoa2034187). Children in the target age range (20 months±14 days) were identified from lists provided by government health workers and house-to-house surveys. All eligible children who were 20 months±14 days between the 22nd of March and the 31st of May 2022 and their mothers were selected and exclusion criteria included: current febrile illness, a known inherited red-cell disorder or previous transfusion, known developmental delay, or household drinking water with iron level exceeding 1 mg per liter. One village was dropped where it was not possible to find an eligible child.

Access policy

CONFIDENTIALITY

RESTRICTIONS
The COVID follow-up data collected in 2022 is accessible and downloadable from the Microdata Library under Public Use terms of use (see https://microdata.worldbank.org/index.php/terms-of-use).

De-identified data and data dictionaries can be made available to any researcher interested in accessing 2018-2020 data

collected from the same sample villages using the same measurement protocols after completing a data request form and signing a data transfer agreement. These data were part of the Benefits and Risks of Iron Interventions in Children: a randomized controlled trial in rural Bangladesh (BRISC) study. Requests for access to the BRISC study data should be sent to Sant-Rayn Pasricha (pasricha.s@wehi.edu.au), Principal Investigator of the BRISC trial (more details can be found in Pasricha, Sant-Rayn, M. Imrul Hasan, Sabine Braat, Leila M. Larson, SM Mulk-Uddin Tipu, Sheikh J. Hossain, Shamima Shiraji et al. "Benefits and risks of iron interventions in infants in rural Bangladesh." New England Journal of Medicine 385, no. 11 (2021): 982-995.) Please contact Alaka Holla (aholla@worldbank.org) if contact with the BRISC team cannot be established.

CITATION REQUIREMENTS
Use of the dataset must be acknowledged using a citation which would include:
- the Identification of the Primary Investigator
- the title of the survey (including country, acronym and year of implementation)
- the survey reference number
- the source and date of download
