## Sampling

## SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

Arua: Eligible students in S.1, S.2 & S.3 completed the survey, of which 529 were aged 13-15 years.

Kampala: Eligible students in S.1, S.2 & S.3 completed the survey, of which 1,811 were aged 13-15 years.

Mpigi: Eligible students in S.1, S.2 & S.3 completed the survey, of which 1,107 were aged 13-15 years.

## RESPONSE RATE

Arua: The school response rate was 88.0%, the class response rate was 100%, the student response rate was 70.5%, and the overall response rate was 62.1%.

Kampala: The school response rate was 95%, the class response rate was 100%, the student response rate was 84.9%, and the overall response rate was 80.7%.

Mpigi: The school response rate was 90%, the class response rate was 100%, the student response rate was 77.6%, and the overall response rate was 69.8%.

**WEIGHTING**

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class

f4 - a post stratification adjustment factor calculated by gender and grade
