Sampling

SAMPLING PROCEDURE

GYTS uses a global standardized methodology that includes a two-stage sample design with schools selected with a probability proportional to enrollment size. The classes within selected schools are chosen randomly and all students in selected classes are eligible to participate in the survey.

A total of 884 students aged 13-15 participated in the Venezuela - Tachira GYTS.

A total of 934 students aged 13-15 participated in the Venezuela - Yaracuy GYTS.

A total of 825 students aged 13-15 participated in the Venezuela - Zulia GYTS.

RESPONSE RATE

Tachira - The school response rate was 80.0%, the class response rate was 100.0%, the student response rate was 84.3%, and the overall response rate was 67.4%.

Yaracuy - The school response rate was 100.0%, the class response rate was 100.0%, the student response rate was 87.5%, and the overall response rate was 87.5%.

Zulia - The school response rate was 73.1%, the class response rate was 100.0%, the student response rate was 76.9%, and the overall response rate was 56.2%.

WEIGHTING

The weighting formula used is:

$$W=W1 * W2 * f1 * f2 * f3*f4$$

The list below shows what each variable in the formula represents.

W1 - The inverse of the probability of selecting the school

W2 - The inverse of the probability of selecting the class within the school

f1 - a school-level nonresponse adjustment factor calculated by school size category (small, medium, large)

f2 - a class adjustment factor calculated by school

f3 - a student-level nonresponse adjustment factor calculated by class

f4 - a post stratification adjustment factor calculated by gender and grade
