ABSTRACT
The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality).

The FAO Yemen Country Office, with technical support from DIEM conducted the first round of a high-frequency monitoring survey focused on quick-changing indicators related to shocks and food security. Data collection took place from 25 January to 5 February with 2588 households in all 22 governorates of Yemen via Computer Assisted Telephone Interviews and using Random Digit Dialing. The sample is representative at national and governorate level with a 95% confidence level and a 10% precision.

Sampling

SAMPLING PROCEDURE
Data collection took place from 25 January to 5 February with 2588 households in all 22 governorates of Yemen via Computer Assisted Telephone Interviews and using Random Digit Dialing. The sample is representative at national and governorate level with a 95% confidence level and a 10% precision.

WEIGHTING
Data were weighted at the analytical stage to ensure a proportionate representation, based on population size and wealth proxies (access to drinkable water and education of the heads of household).
