Overview

ABSTRACT

The files included in this database contain the conventional and the adjusted measures of official development assistance to a set of 133 countries between 1975 and 1995. The principal component of the data set is Effective Development Assistance (EDA), an aggregate measure of aid flows combining total grants and the grant equivalents of all official loans. EDA is computed on a loan-by-loan basis to reflect the financial cost the creditor incurs in making loans on concessional terms.

Three files are included in this data set: EDA.xls, BEDA.xls and MEDA.xls. BEDA.xls aggregates annual flows from all bilateral donors. MEDA.xls aggregates annual flows from all multilateral donors. EDA.xls shows the total from all official sources, which is equal to the sum of BEDA and MEDA for the same variables. The data set is organized by recipient country and year. A more detailed description of variables and files is included in the "readme" file.

KIND OF DATA
Aggregate data [agg]

UNITS OF ANALYSIS

Scope

NOTES

The datasets include the following indicators:

Effective Development Assistance

Total disbursements on EDA loans

Grant equivalents used to construct EDA

Grants used to construct EDA

Average GE on all EDA loans with disbursements during each given year

Bilateral Debt forgiveness used to adjust bilateral grants

Memo item, total technical assistance

Bilateral EDA

Total disbursements on bilateral EDA loans

Bilateral grant equivalents used to construct BEDA

Bilateral grants used to construct BEDA

Average GE on all BEDA loans with disbursements during each given year

Bilateral Debt forgiveness used to adjust bilateral grants

Memo item, bilateral technical assistance

Multilateral Effective Development Assistance

Total disbursements on Multilateral EDA loans

Multilateral grant equivalents used to construct MEDA

Multilateral grants used to construct MEDA

Average GE on all MEDA loans with disbursements during each given year

Memo item, multilateral technical assistance

File Description

Variable List

Content	Grant Element (GE): The grant equivalent, when expressed as a percentage of the discounted face value of the loan, is the grant element (GE) of the loan. By showing the fraction of a loan that is essentially cost-free, the grant element provides a comparable measure of loan concessionality across time, country and currency of issue.

Content	Grant Equivalent (GQ): The grant equivalent of a loan is defined as the difference between the present values of the loan's disbursements and stream of expected debt service payments, or the resources that borrowers receive in excess of their interest and repayment obligations. Conceptually, for each loan, this amount is equal to the net loss to the lender -- equivalent to a grant. The computation of grant equivalents involves discounting two cash flow streams for each loan (disbursements and interest/amortization payments) using discount rates that reflect both the term structure of each loan and the market conditions specific to the loan's currency of issue at the time of valuation.

Content	Effective Development Assistance (EDA): EDA is defined as the sum of grant equivalents and grants, excluding technical assistance. This adjusted measure uses the same conventional grant data but aggregates grant equivalents of loans (GQ) rather than the full face value of all loans deemed concessional. The grant equivalents used to construct EDA are computed using the methodology presented in "Measuring Aid Flows, A New Approach."

Content	Grant Equivalent (GQ): The grant equivalent of a loan is defined as the difference between the present values of the loan's disbursements and stream of expected debt service payments, or the resources that borrowers receive in excess of their interest and repayment obligations. Conceptually, for each loan, this amount is equal to the net loss to the lender -- equivalent to a grant. The computation of grant equivalents involves discounting two cash flow streams for each loan (disbursements and interest/amortization payments) using discount rates that reflect both the term structure of each loan and the market conditions specific to the loan's currency of issue at the time of valuation.

Content	Effective Development Assistance (EDA): EDA is defined as the sum of grant equivalents and grants, excluding technical assistance. This adjusted measure uses the same conventional grant data but aggregates grant equivalents of loans (GQ) rather than the full face value of all loans deemed concessional. The grant equivalents used to construct EDA are computed using the methodology presented in "Measuring Aid Flows, A New Approach." = MEDA GQ + M Grants - MTA
