VERSION DESCRIPTION

Version 02 (September 2010)

As part of the work on the 2013 Global Financial Development Report, and the related Global Financial Development Database, data series from the Financial Development and Structure database have also been updated through 2010. The revised dataset covers 203 jurisdictions, removing seven jurisdictions (American Samoa, Channel Islands, Greenland, Guam, Mayotte, Northern Mariana Islands, and Puerto Rico) for absence of data, while including three jurisdictions (Kosovo, San Marino, and Tuvalu) that were not covered in the previous iterations of the dataset. Taiwan and Netherland Antilles are also removed for reasons of consistency with the Global Financial Development Database.

Please note that most indicators have been recalculated for the entire time period to ensure consistency over time. As regards the z-score, sd(ROA) for each bank is now calculated using all years instead of the 5-year moving window used in the previous version. The file contains a sheet with definitions and sources. For more detailed definitions and detailed descriptions of the underlying sources, please see the working papers below.

NOTES

Overview

ABSTRACT

We have again updated the more popular data series from the Financial Structure database through 2008. Revised: April 2010. The revised dataset has some additional variables (two indicators of deposits in banks and in financial institutions relative to GDP added in 2007, and included in this latest update, some standard banking variables (ROE, ROA, cost-income ratio and z-score) as well as some measures of financial globalization: outstanding and net issues of international debt to GDP, loans from non-resident banks to GDP, off-shore deposits to domestic bank deposits, and remittance inflows to GDP.

We gratefully acknowledge the assistance of Pam Gill, Baybars Karacaovali and Edward Al-Hussainy with this update. Please note that most metrics have been recalculated for the entire time period to ensure consistency over time. The file contains a sheet with definitions and sources; for more detailed definitions and detailed description of the sources, please see the working paper attached as external resources.

This new database of indicators of financial development and structure across countries and over time is unique in that it unites a range of indicators that measure the size, activity, and efficiency of financial intermediaries and markets.

The compiled data permit the construction of financial structure indicators to measure whether, for example, a country's banks are larger, more active, and more efficient than its stock markets. These indicators can then be used to investigate the empirical link between the legal, regulatory, and policy environment and indicators of financial structure. They can also be used to analyze the implications of financial structure for economic growth.

KIND OF DATA

Aggregate data [agg]

UNITS OF ANALYSIS

Scope

NOTES

The datasets include information related to:

- Bank concentration
- Private credit
- Liquid liabilities
- Bank assets
- Market capitalization
- Remittances
- Loans
- Stock market

A New Database on Financial Development and Structure

Title	A New Database on Financial Development and Structure
Author(s)	Thorsten Beck , Asli Demirguc-Kunt and Ross Eric Levine; The World Bank, Development Research Group
Date	1999-07-01
Language	English
Description	This new database of indicators of financial development and structure across countries and over time unites a range of indicators that measure the size, activity, and efficiency of financial intermediaries and markets.
Filename	http://go.worldbank.org/TGH1EMIWU0

Financial Institutions and Markets across Countries and over Time, Data and Analysis

Title	Financial Institutions and Markets across Countries and over Time, Data and Analysis
Author(s)	Thorsten Beck, Asli Demirgüç-Kunt and Ross Levine; The World Bank, Development Research Group
Date	1999-05-01
Description	This paper introduces the updated and expanded version of the Financial Development and Structure Database and presents recent trends in structure and development of financial institutions and markets across countries. The authors add indicators on banking structure and financial globalization. They find a deepening of both financial markets and institutions, a trend concentrated in highincome countries and more pronounced for markets than for banks. Similarly, the recent increase in cross-border lending and debt issues has been concentrated in highincome countries, while low and lower-middle income countries have experienced an increase in remittance flows. Low net interest margins, rising profitability and declining stability in high-income countries' banking sectors characterize the recent financial sector boom in high income countries leading up to the global financial crisis of 2007.

A Database on Financial Development and Structure (Updated September 2012)

Title	A Database on Financial Development and Structure (Updated September 2012)
Description	As part of the work on the 2013 Global Financial Development Report , and the related Global Financial Development Database, data series from the Financial Development and Structure database have also been updated through 2010. The revised dataset covers 203 jurisdictions, removing seven jurisdictions (American Samoa, Channel Islands, Greenland, Guam, Mayotte, Northern Mariana Islands, and Puerto Rico) for absence of data, while including three jurisdictions (Kosovo, San Marino, and Tuvalu) that were not covered in the previous iterations of the dataset. Taiwan and Netherland Antilles are also removed for reasons of consistency with the Global Financial Development Database.
