## Introduction

The 1998/99 (1991 E. C.) Rural Integrated Household Survey Program (RIHSP) of Ethiopia covers 1450 rural Enumeration Areas (EAs) inhabited by sedentary population. The distribution of the sample EAs is given in table 1 below.

For the purpose of the survey the rural part of the country inhabited by sedentary population is divided into 53 strata.

The sample EAs were selected by using the frame compiled from the 1994 Ethiopian population and housing census.

Table 1. Distribution of sample EAs by killil and zone
