

QUARTERLY REPORT OF THE SRI LANKA LABOUR FORCE SURVEY

Quarterly Report – 2013

First Quarter

DEPARTMENT OF CENSUS & STATISTICS MINISTRY OF FINANCE AND PLANNING

ISBN 978 - 955 - 577 - 854 - 1

Preface

In the past, information on labour force characteristics, employment and unemployment etc. were collected through labour force and socio - economic surveys conducted at five yearly time intervals. However, the employment and unemployment data are required at very short intervals to monitor the programs made in the employment generating policies of the government. Therefore, to satisfy this need, the Department of Census and Statistics (DCS) designed a labour force survey on a quarterly basis, to measure the levels and trends of employment, unemployment and labour force in Sri Lanka on a continuous basis. This survey was commenced from the first quarter of 1990 and this report is the eighty seventh in the series of quarterly reports published so far.

Current survey concepts and methods are very similar to those introduced at the beginning of the survey in 1990. However, some changes were made over the years to improve the accuracy and usefulness of the data. The significant revisions were made on the labour force survey questionnaire in 1996, 2006 and the latest revision is in 2013. The revised version is introduced for the survey conducted in 2013 first quarter, and this report consists with statistics using new concepts.

The field work of the survey for the first quarter 2013 was done in January, February and March in year 2013. This survey covered the whole country. A nationally representative annual sample of about 25,000 housing units have been selected for the survey in 2013. This report is based on a quarterly sample of 6,250 housing units.

D.C.A. Gunawardena
Director General of Census & Statistics

Department of Census & Statistics, 109, Rotunda Tower, Galle Road. Colombo 03. 05.11.2013.

Acknowledgements

This report is eighty seventh in the series of the Quarterly Labour Force Survey which was commenced from the first quarter 1990 and is being continued by the Department of the Census and statistics.

Planning and execution of the survey was done by staff of the Sample Survey Division under the direction of Mr. W.W.M.A.S. Premakumara, Additional Director General, Sample Surveys Division.

The Field operation activities were organized by Mr. D.C.A.Fernando, Statistician of the Sample Surveys Division. The supervision activities were carried out by Mr. P.A.Subawickrama, Mr. D.C.A.Fernando, Mrs. W.A.C.Wijebandara, Mrs. M.D.D.D.Deepawansa, Mr. H.T.Fonseka Mr.U.B.Saputhanthiri, Mr. S.M.M. Badudeen, Statisticians & Mr.J.S.N.P.Dharmawardana, Miss.C.Jayawickrama, Senior Statisticians, of the sample surveys division and Heads of statistics divisions in each district.

The computer data processing and final tabulations were done by Mrs. W.A.S.M.P. Gunasekara, Mr.T. Thirugnanatheepan Statistical Officers and Mrs. A.N. Ekanayake and Mr. M.B.M. Shiras, Statistical Assistants of the Sample Surveys Division, under the supervision of Mr. P.A. Subawickrama, Statistician using Microcomputers. The statistical officers, statistical assistants, Information and Communication Technology assistants, Data Entry Officer/Coding clerks and development officers (iii), of the sample survey division are acknowledged for their valuable contribution during the whole survey process.

Developing of sample selection programme and its related computer software was done by Mr. K.M.R. Wickramasinghe, AD(ICT) of the sample survey division. MR. J.S.N.P.Dharmawardana, Senior Statistician, Sample Surveys Division prepared the Quarterly Bulletin of the survey.

This publication was organized and prepared by Mrs. W.A.C. Wijebandara, Statistician, Sample Surveys Division, assisted by Mrs. W.A.S.M.P. Gunasekara, Statistical officer.

The Information & Communication Technology Division, under the direction of Mr. S.A.S. Bandulasena, Director (Data Processing) and under the supervision of Mr. P.M.R.Fernando, Deputy Director (ICT) and Mr. W.H.P.N. Weerasiri, Sri Lanka Information and Communication Technology Service I/II, was responsible for the survey data entry and preparation of data entry and computer edits programmes. Data entry was decentralized and manual editing, coding & data entry were done by responsible officers at district office kachcheries in all districts.

District field staff of the Department who worked on the survey deserves a special word of thanks. They include District Deputy Directors/ Senior Statisticians/ Statisticians for supervision and field Statistical Officers, who worked hard at the data collection stage, to make this survey a success. Printing of the report was done at the staff of Printing Division, under the supervision of Mr. W.C. Weerawansha, Senior Statistician.

Finally, I wish to express my appreciation to all the respondents of the survey for their valuable cooperation.

Sri Lanka Labour Force Survey Summary Statistics on Labour Force Characteristics 2013 1st Quarter (All Island)

15 years & over population

	Total	Male	Female	Urban	Rural
Population (15 years & over)	16,356,181	7,571,662	8,784,520	2,925,002	13,431,179
Labour force in this age group	8,861,919	5,683,067	3,178,852	1,399,832	7,462,087
Labour force participation rate	54.2	75.1	36.2	47.9	55.6
Employed population	8,451,187	5,494,375	2,956,812	1,330,707	7,120,480

Introduction

Labour Force ...

(Economically Active Population)

Labour force participation rate (LFPR) ...

Number of persons (age 15 & above) who were employed or unemployed during the reference week

Sri Lanka Labour Force Survey (LFS) is designed to measure the levels and trends of employment, unemployment and labour force in Sri Lanka. LFS is being conducted quarterly, since the first quarter of 1990.

The field work of the survey for the first quarter of 2013 was done in January, February and March covering the whole island

For the first time of LFS history,

- Considered age group was 15 years and above for the working age population
- Introduced new occupation and industry classifications (SLSCO 2008 and SLSIC Rev.4)

Labour Force ...

(Economically Active Population)

Table 1 : Economically active population by gender - First quarter 2013

Sector	Economically active population						
	Total	%	Male	%	Female	%	
Sri Lanka	8,861,919	100.0	5,683,067	64.1	3,178,852	35.9	
Urban	1,399,832	100.0	962,828	68.8	437,004	31.2	
Rural	7,096,526	100.0	4,512,589	63.6	2,583,936	36.4	
Estate	365,561	100.0	207,649	56.8	157,912	43.2	

Table 2: Economically inactive population by gender - First quarter 2013

Sector	Economically inactive population							
Sector	Total	%	Male	%	Female	%		
Sri Lanka	7,494,262	100.0	1,888,595	25.2	5,605,667	74.8		
Urban	1,525,170	100.0	413,719	27.1	1,111,451	72.9		
Rural	5,723,157	100.0	1,394,254	24.4	4,328,902	75.6		
Estate	245,936	100.0	80,621	32.8	165,314	67.2		

Table 3: LFPR by gender and year (Excluding Northern province.)

Year	Total	Male	Female
2008	55.1	76.1	36.6
2009	54.1	74.7	36.2
2010	53.4	75.0	34.4
2011	53.4	74.2	35.0
2012	53.0	75.2	33.5
2013 Q1	54.6	75.0	37.0

Referring the table 3, It is important to note that, male participation to the labour force was almost twice as that of females.

Table 3 provides the information on LFPRs since year

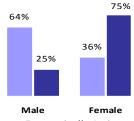

According to the table 1, the estimated economically active population was about 8.86 million in the first Quarter 2013. Of which 64.1 percent were males and 35.9 percent were females. Out of the economically inactive population 25.2 percent were males and 74.8 percent were females (Table 2).

Table4: LFPR by age group and gender -First quarter 2013

Age group	Total	Male	Fe-
Sri Lanka	54.2	75.1	36.2
15 - 19	17.2	23.5	10.9
20 - 24	56.1	74.7	40.6
25 - 29	66.1	93.5	43.2
30 - 34	66.9	95.2	42.8
35 - 39	70.4	97.3	46.9
40 - 44	73.4	96.5	53.5
45 - 49	69.9	94.4	49.8
50 - 54	67.5	92.2	46.0
55 - 59	59.9	82.4	38.8
60+	29.7	46.2	16.3

Considering the table 4, the distribution of LFPR by age group and by gender depicts more male participation compared to female in all age groups. Highest rate for male was reported from age group 35-39 years, while that of females was reported from the age group of 40 – 44 years.

Economically ActiveEconomically Inactive

Employed ...

During the reference period, persons, who worked as paid employees, employers, own account workers (self employed), or contributing family workers are said to be employed.

This includes persons with a job but not at work during the reference period

Reference Period: Previous week of the survey week

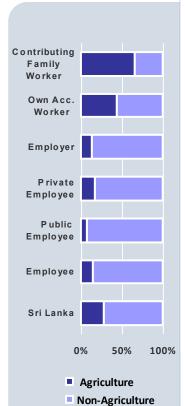

Figure 2 : Distribution of Economically active/Inactive population-

Figure 2 shows that, comparatively higher percentage of employees both in private & public sector engage in non-agricultural activities.

Table 5 : Distribution of Employed population by main industry (Second quarter 2012 – First quarter 2013)

Table 5 shows the percentage distribution of employed population by main industry from second quarter 2012 to first quarter 2013. The total number of employed persons in Sri Lanka was estimated as about 8.5 million in first quarter 2013. Of which, about 44.9 percent engaged in services sector, 28.2 percent in agriculture sector, and 26.9 percent in Industries sector.

Agriculture

1. Agriculture Foresty and Fishery (A)

Industries

- 1. Minning & Quarrying (B)
- 2. Manufacturing (C)
- 3. Construction, Electricity, gas, steam and air conditioning supply, Water supply, sewerage, waste management and remediation activities (D, E,F)

Services

- Wholesale and retail trade, repair of motor vehicles and motor cycles(G)
- 2. Transportation and storage (H)
- 3. Accommodation and food services activities (I)
- 4. Information and communication (J)
- 5. Financial and insurance activities (K)
- 6. Professional, scientific and technical activities (M)
- 7. Administrative and support service activities (N)
- 8. Public administration and defence compulsory social security (O)
- 9. Education (P)
- 10. Human health and social work activities (Q)
- 11. Other service activities (S)
- 12. Activities of households as employers; undifferentiated goods and services - producing activities of households for own use (U)
- 13. Real estate activities (L) Arts, entertainment and recreation (R) Activities of extra teritorial organizations & bodies (U)

	Sri Lanka		Sector				
Employment Status	Sri Lan	ка	Agricult	ure	Non-Agriculture		
Status	No.	%	No.	%	No.	%	
Sri Lanka	8,451,187	100.0	2,384,795	28.2	6,066,392	71.8	
Employee	4,749,815	100.0	689,346	14.5	4,060,470	85.5	
Public	1,308,136	100.0	90,000	6.9	1,218,136	93.1	
Private	3,441,679	100.0	599,345	17.4	2,842,334	82.6	
Employer	268,847	100.0	25,463	9.5	243,384	90.5	
Own Account Worker	2,637,198	100.0	1,143,087	43.3	1,494,111	56.7	
Contributing Family Worker	795,327	100.0	526,899	66.2	268,428	33.8	

According to the table 6, more employers were in non-agriculture sector than in agriculture sector. But contributing family workers were highly concentrated in agriculture sector.

Table 6 : Percentage distribution of employed population by employment status and Agriculture/Non-Agriculture sector—First Quarter 2013

Table 7 depicts the percentage distribution of male and female employed population by main industries. Regardless of the gender, highest employment concentrated in service sector. Further among employed women about 31.8 percent was in agriculture sector while this share was 26.3 percent among males.

Major	C. Landa	Gender			
Industry Group	Sri Lanka	Male	Female		
Sri Lanka	100.0	100.0	100.0		
Agriculture	28.2	26.3	31.8		
Industry	26.9	27.7	25.5		
Services	44.9	46.1	42.7		

Table 7 : Distribution of Employed population by main industry & sex – First quarter 2013

Unemployment ...

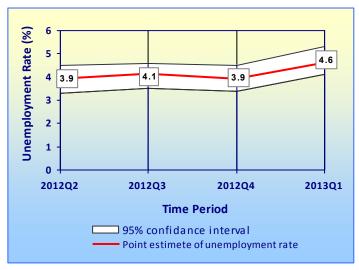

Figure 3: Unemployment rates and it's 95% confidence intervals (2012 Q2 - 2013 Q1)

¹Sampling error: When a sample, rather than the entire population, is surveyed, estimates differ from the true population values they represent. This difference, or sampling error, occurs by chance, and its variability is measured by the standard error of the estimate.

For more details, please refer the explanatory note on the labour force link in the DCS website.

According to the figure 3, it is very important to note that, when sampling error¹ was considered" there were no statistically significant drops of unemployment rates reported in different time periods starting from second quarter 2012 to first quarter 2013.

The number of unem-

ployed persons was

estimated as about

410,733 during the First

quarter 2013. The un-

employment rate for

the First quarter 2013

was reported as

percent.

Age group	Col Laudia	Ge	nder
(Years)	Sri Lanka	Male	Female
Sri Lanka	4.6	3.3	7.0
15—24	20.1	16.4	26.3
25—29	7.5	5.0	12.0
Over 30	1.7	1.0	2.9

Table 8: Unemployment rate by age group and gender— First quarter 2013

As can be seen from table 8, overall unemployment rate reported for female was 7 percent and it was 3.3 percent for male. Youth unemployment rate 15 – 24 years reported for first quarter 2013 was 20.1 percent and that reported the highest unemployment rate among age groups. Those rates for both males and females were 16.4 and 26.3 percent respectively.

Further the survey results revealed that the unemployment was severe among females than that of males, in all age groups.

The highest unemployment rate was reported from the G.C.E(A/L) and above group which was about 9.2 percent. These were 6.1 percent and 12.5 percent for males and females respectively.

Table 9: Unemployment rate by level of education - First quarter 2013

This shows that the problem of unemployment is more acute in the case of educated females than educated males .

Unemployed ...

Persons available and/or looking for work, and who did not work and taken steps to find a job during last four weeks and ready to accept a job given a work opportunity within next two weeks are said to be unemployed.

Unemployment Rate...

The number of unemployed persons as a percentage of the labour force.

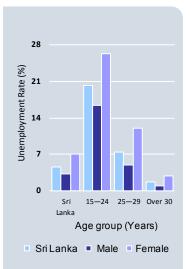

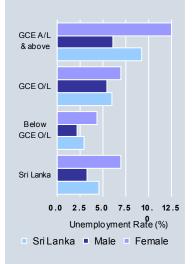

Figure 3 : Unemployment rate by age group

— First quarter 2013

Explanatory Notes

Coverage

Sri Lanka Labour Force Survey was designed to measure the levels and trends of employment, unemployment and labour force in Sri Lanka. This survey is being conducted quarterly, since the first quarter of 1990.

This quarterly survey of households is conducted through a scientifically selected sample designed to represent the civilian non-institutional population. Respondents are interviewed to obtain information about the employment status etc. of each member of the household 15 years of age and older.

Data collection of the survey is done during the third week of the each month, Monday through Sunday. This is known as the "survey week". The information relates to economic activity and employment status are referred to the preceding week of the survey week; referred to as the "reference week".

The concepts and definitions underlying labour force data are as follows.

Concepts and definitions

- 1. **Labour force**: The labour force is composed of the economically active population 15 years of age and over.
- 2. **The** *Economically Active Population*: is defined as those persons who are/were employed or unemployed during the reference period of the survey.
- 3. **Employed:** Persons, who during the reference period, worked as paid employees, employers, own account workers (self-employed), or contributing family workers are said to be employed. This includes persons with a job but not at work during the reference period.
- 4. *Unemployed*: Persons who are seeking and available for work, but had no employment during the reference period.
- 5. *Currently Economically Active*: A person who was employed or unemployed during the current reference period is considered to be currently economically active.
- 6. **Not in the Labour Force (not economically active)**: Persons who were neither working not available/looking for work are classified as "not in the labour force". Persons are not in the labour force for such reasons as: full time care of the household, full time students, retired or old age, infirmed or disabled, or are not interested in working for one reason or another. Current and Usual definitions apply.

Reliability of the estimates

Statistics based on the quarterly labour force data are subject to both sampling and non - sampling errors. When a sample rather than the entire population is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent.

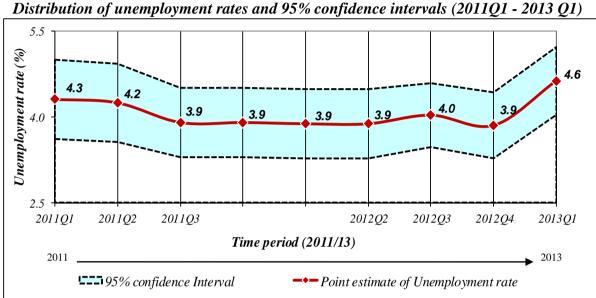

The exact difference, or sampling error, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 95 percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.96 standard errors from the "true" population value, because of sampling error. Analyses relating to the Labour Force Survey are generally conducted at the 95 percent level of confidence.

For example, the confidence interval for the quarterly unemployment rate is on the order of

```
Estimated value _{(of the unemployment rate)} \pm (standard error) * (1.96)
6.4 \pm (0.4) * (1.96)
(6.4 \pm 0.784)
```

This means, the 95 percent confidence interval on the quarterly unemployment rate could range from (5.6 to 7.2). This implies that there is about 95 percent chance that the "true" unemployment rate lies within this interval. This range includes all the values range from 5.6 to 7.2. When the comparison of this estimate is done between two quarters, if any of the value within the 95 percent confidence interval of one quarter overlaps with the confidence interval of the other, it means that the estimates of this two quarters $\it are not significantly different.$

Therefore, in each quarterly labour force report, a separate table is given including approximate standard errors for some selected variables, so that users could understand this statistical scenario clearly.

Note:

- Survey was not conducted in the fourth quarter 2011 & first quarter 2012 due to activities of population census.
- Excluding Northern Province

As seen in figure 2, it is very important to note that, there were no statistically significant differences between the unemployment rates reported in different time periods of 2011/2013, when sampling error was considered.

Change in survey schedule

Current survey concepts and methods are very similar to those introduced at the beginning of the survey in 1990. However, some changes have been made over the years to improve the accuracy and usefulness of the data. In January 2006, some improvements were made to the labour force survey schedule in order to fulfill the requirements of data users and also to provide additional information for planning purposes. The revision was made focusing on literacy, household economic activities, and informal sector employment and under employment etc.

From January, 2013 onwards, the lower bound of working age populations is considered as age 15, hence age 15 and over population is considered as working age population. The survey schedule is updated to obtain more precise information on following age, informal employment, informal sector, secondary occupation, wages & income, unemployment & trainings.

New Industry & Occupation classifications

From January 2013 onward the survey uses new industry & occupation classifications, such as

SLIC Rev 4:- Sri Lanka Standard Industry Classification based on International Standard Industry classification - Rev.4 (ISIC Rev 4)

SLSCO 08:- Sri Lanka Standard Classification of Occupation -2008 based on International Standard Classification of Occupation-2008 (ISCO 2008)

Note:

It is important to note that, all the data published here are the estimates based on a sample survey and these are subject to sampling errors. These sampling errors can be statistically evaluated from the survey results. Therefore, sampling error is normally measured in terms of the standard error of the particular variable. Standard error could be used to calculate the confidence limits with a prescribed accuracy where the true value of the estimates lies.

Further reliability of the estimates can be expressed in terms of Coefficient of Variation (CV). The CV is a relative measure of the sampling error and is calculated as sampling error divided by the expected value of the given characteristic.

In view of this, following table is given to show the estimates for some selected variables, it's standard error, CV and 95% Confidence interval.

It is also important to note that all the estimates we publish in this report are subject to sampling error and one should be cautious in the interpretation of results, especially with respect to the trends over time.

Estimate of Confidence Intervals for some selected characteristics

Alternative Estimates of Employment, Unemployment and Labour Force Characteristics

Official employment, unemployment and labour force characteristics are estimated at the Sri Lanka Labour Force Survey, based on the internationally comparable concepts and definitions recommended by the ILO. However the validity of the concepts and definitions used at the survey is questioned very often in some forums, for the appropriateness of these concepts and definitions in the Sri Lankan context.

The concepts and definitions, which were found to be controversial, are as below.

(1) Number of Hours of Work : A person who work at least one hour during the reference week, is

considered **employed**, under these definitions.

(2) Working Age Population : All persons of age 10 years and over are considered to be in the working

age, before 2013. However, this was changed as age 15 and over from

2013 onward.

(3) **Employment Status** : All,

a) Paid employees, (those who work for wages/salaries).

b) Employers (who have at least one paid employee under them).

c) Own account workers (who carry out the economic activity without

having any paid employees).

d) Contributing family workers (who make their contribution to the economic activities carried out by their own household, without

wages/salaries).

The validity of the above concepts and definitions is raised due to the following reasons.

1) Number of Hours of Work : Some pointed out that one hour per week is too low, to consider a

person to be employed.

(2) Working Age Population : Some pointed out those persons in the age group 10-14 yrs. are too

young to be considered in the working age. (From 2013 onward the working age population is considered as age 15 and over).

(3) **Employment Status** : Some pointed out that 'contributing family workers' may work in the

family enterprise without payment because they have no other work, and so it is not appropriate to consider them as employed.

An attempt has been made to produce 'Alternative estimates of Employment, Unemployment and Labour Force Characteristics,' by revising the original concepts and definitions so that the above issues are addressed as explained below.

The revisions made are,

(1) Number of Hours of Work : Persons who work 20 hours or more per week only are considered to

be employed.

(2) Contributing Family Worker : Contributing family workers are not considered as employed. Those

contributing family workers who were reported to be seeking some other work are considered as **unemployed** and the rest of the unpaid family workers are considered as **economically inactive** (not in the labour force) so only, **a) paid employees b) employers and c) own**

account workers are considered to be employed.

Following tables are based on the above alternative concepts and definitions.

TABLE 1 - LABOUR FORCE STATUS OF HOUSEHOLD POPULATION 15 YEARS & OVER (ALTERNATIVE ESTIMATES)
