XVI. APPENDIX 5 -- PUBLICATIONS AND DATA RELEASES ..... 118
XVII. INQUIRIES, SUGGESTIONS, AND COMMENTS ..... 120

## I. INTRODUCTION

The Consumer Expenditure Survey (CE) program provides a continuous and comprehensive flow of data on the buying habits of American consumers. These data are used widely in economic research and analysis, and in support of revisions of the Consumer Price Index. To meet the needs of users, the Bureau of Labor Statistics (BLS) produces population estimates (for consumer units or CUs) of average expenditures in news releases, reports, and articles in the Monthly Labor Review. Tabulated CE data are also available on the Internet and by facsimile transmission (see Section XVI. Appendix 5). The microdata are available on CD-ROM as SAS data sets or ASCII text files.

These microdata files present detailed expenditure and income data for the Diary component of the CE for 2006. They include weekly expenditure (EXPN), annual income (DTAB) files, and imputed income files (DTAB_IMPUTE). The data in EXPN, DTAB, and DTAB_IMPUTE files are categorized by a Universal Classification Code (UCC). The advantage of the EXPN and DTAB files is that with the data classified in a standardized format, the user may perform comparative expenditure (income) analysis with relative ease. The FMLY and MEMB files present data on the characteristics and demographics of CUs and CU members. The summary level expenditure and income information on the FMLY files permits the data user to link consumer spending, by general expenditure category, and household characteristics and demographics on one set of files.

Estimates of average expenditures in 2006 from the Diary survey, integrated with data from the Interview survey, are published in Consumer Expenditures in 2006. A list of recent publications containing data from the CE appears at the end of this documentation.

The microdata files are in the public domain and, with appropriate credit, may be reproduced without permission. A suggested citation is: "U.S. Department of Labor, Bureau of Labor Statistics, Consumer Expenditure Survey, Diary Survey, 2006".

## II. CHANGES FROM THE 2005 MICRODATA FILES

## SAMPLE DESIGN CHANGE

Sample size reduced in 2006. See Section X, Sampling Statement for further information on sample design and cooperation levels.

## A. FMLY file

1. Variable Deletion

| Variable name | Description | Start <br> position | Format |
| :--- | :--- | :--- | :--- |
| REGION_ | Flag variable for REGION | 581 | CHAR $(1)$ |

2. Variable Additions

| Variable name | Description | Start position | Format |
| :---: | :---: | :---: | :---: |
| PSU | Primary Sampling Unit <br> Coded <br> 1109 New York, NY <br> 1110 New York, Connecticut suburbs <br> 1111 New Jersey suburbs <br> 1102 Philadelphia - Wilmington - Atlantic <br> City, PA - NJ - DE - MD <br> 1103 Boston - Brockton - Nashua, MA - <br> NH - ME - CT <br> 1207 Chicago - Gary - Kenosha, IL - IN - <br> WI <br> 1208 Detroit - Ann Arbor - Flint, MI <br> 1210 Cleveland - Akron, OH <br> 1211 Minneapolis - St. Paul, MN - WI <br> 1312 Washington, DC - MD - VA - WV <br> 1313 Baltimore, MD <br> 1316 Dallas - Ft. Worth, TX <br> 1318 Houston - Galveston - Brazoria, TX <br> 1319 Atlanta, GA <br> 1320 Miami - Ft. Lauderdale, FL <br> 1419 Los Angeles - Orange, CA <br> 1420 Los Angeles suburbs, CA <br> 1422 San Francisco - Oakland - San Jose, <br> CA <br> 1423 Seattle - Tacoma - Bremerton, WA <br> 1424 San Diego, CA <br> 1429 Phoenix - Mesa, AZ <br> Note: Only " $A$ " size PSUs are identified on the public use microdata | 3084 | CHAR(4) |

Beginning in 2006Q1, the original (pre-income imputation) income variables will be added back onto the FMLY file. These variables will resume their former start positions.

| Variable name | Description | Start position | Format |
| :---: | :---: | :---: | :---: |
| ALIOTHX | During the past 12 months, what was the total amount of income from regular contributions from alimony and other sources, such as from persons outside the CU received by ALL CU members? | 1530 | NUM(8) |
| ALIOTHX |  | 1538 | CHAR(1) |
| CHDOTHX | During the past 12 months, what was the total amount of income from child support payments in other than a lump sum amount received by ALL CU members? | 1521 | NUM(8) |
| CHDOTHX |  | 1529 | CHAR(1) |
| DIVX | During the past 12 months, what was the total amount of income from dividends, royalties, estates, or trusts received by ALL CU members? | 48 | NUM(8) |
| DIVX |  | 56 | CHAR(1) |
| FBSNSX | Amount of income or loss from nonfarm business, partnership or professional practice received by all CU members in past 12 months (Sum BSNSX from MEMB file for all CU members) | 83 | NUM(8) |
| FBSNSX |  | 91 | CHAR(1) |
| FFARMX | Amount of income or loss from own farm received by all CU members in past 12 months (Sum FARMX from MEMB file for all CU members) | 103 | NUM(8) |
| FFARMX |  | 111 | CHAR(1) |
| FFEDTXX | Amount of Federal income tax deducted from last pay annualized for all CU members (sum ANFEDTXX from MEMB file for all CU members) | 112 | NUM(8) |
| FFEDTXX |  | 120 |  |
| FGVX | Amount of government retirement deducted from last pay annualized for all CU members (Sum ANGVX from MEMB file for all CU members) <br> BLS derived | 121 | NUM(8) |
| FGVX |  | 129 | CHAR(1) |
| FINCAFTX | Amount of CU income after taxes in past 12 months (FINCBEFX - PERSTAX) *L <br> BLS derived | 130 | NUM(8) |
| FINC_FTX |  | 138 | CHAR(1) |
| FINCBEFX | ```Amount of CU income before taxes in past 12 months (UNEMPX + WRKRSX + WELFRX + INTX +DIVX + PENSIONX + ROOMX + OTHRNTX + CHDOTHX + ALIOTHX + OTHINX + JFS_AMT + FWAGEX + FBSNSX + FFARMX + FSS_RRX + FSUPPX) *L BLS derived``` | 139 | NUM(8) |

| FINC_EFX |  | 147 | CHAR(1) |
| :---: | :---: | :---: | :---: |
| FJSSDEDX | Estimated amount of income contributed to Social Security by all CU members in past 12 months (Sum JSSDEDX from MEMB file for all CU members) <br> BLS derived | 168 | NUM(8) |
| FJSS_EDX |  | 176 | CHAR(1) |
| FPVTX | Amount of private pension fund deducted from last pay annualized for all CU members (sum ANPVTX from MEMB file for all CU members) <br> BLS derived | 177 | NUM(8) |
| FPVTX_ |  | 185 | CHAR(1) |
| FRRX | Amount of Railroad Retirement deducted from last pay annualized for all CU members (Sum ANRRX from MEMB file for all CU members) <br> BLS derived | 195 | NUM(8) |
| FRRX |  | 203 | CHAR(1) |
| FSS_RRX | Amount of Social Security and Railroad Retirement income prior to deductions for medical insurance and Medicare received by all CU members in past 12 months (Sum SOCRRX from MEMB file for all CU members) | 351 | NUM(8) |
| FSS_RRX |  | 359 | CHAR(1) |
| FSTATXX | Amount of state and local income taxes deducted from last pay annualized for all CU members (sum ANSTATX from MEMB file for all CU members) | 360 | NUM(8) |
| FSTATXX |  | 368 | CHAR(1) |
| FSUPPX | Amount of Supplemental Security Income from all sources received by all CU members in past 12 months (Sum SUPPX from MEMB file for all CU members) | 369 | NUM(8) |
| FSUPPX |  | 377 | CHAR(1) |
| FWAGEX | Amount of wage and salary income before deductions received by all CU members in past 12 months (Sum WAGEX from MEMB file for all CU members) | 378 | NUM(8) |
| FWAGEX_ |  | 386 | CHAR(1) |
| INC_RANK | Weighted cumulative percent income ranking of CU to total population (rural and nonrural CUs). Ranking based on income before taxes for complete reporters. Rank of incomplete income reporters is set to zero. <br> BLS derived | 1559 | NUM(9.7) |
| INC__ANK |  | 1568 | CHAR(1) |
| INTX | During the past 12 months, what was the total amount of income from interest on savings accounts or bonds received by ALL CU members? | 414 | NUM(8) |
| INTX |  | 422 | CHAR(1) |
| JFS_AMT | Annual value of Food Stamps received by CU JFS_AMT $=12 \mathrm{X}$ sum of (FS_AMT1 ... | 423 | NUM(8) |

|  | FS_AMT7) <br> NOTE: JFS_AMT is a component of FINCBEFX, NONERNX, and FINCAFTX <br> BLS derived |  |  |
| :---: | :---: | :---: | :---: |
| JFS_AMT. |  | 431 | CHAR(1) |
| OTHINX | During the past 12 months, what was the total amount of other money income including money received from cash scholarships and fellowships, stipends not based on working, or from the care of foster children received by ALL CU members? | 499 | NUM (8) |
| OTHINX |  | 507 | CHAR(1) |
| OTHRNTX | During the past 12 months, how much net income or loss was received from payments from other rental units? *L | 526 | NUM(8) |
| OTHRNTX |  | 534 | CHAR(1) |
| PENSIONX | Amount received from pensions or annuities from private companies, military or government, IRA or Keogh | 535 | NUM(8) |
| PENS_ONX |  | 543 | CHAR(1) |
| PERSTAX | ```Amount of personal taxes paid by CU in past 12 months (ADDFEDX + ADDSTAX + ADDOTHX + FFEDTXX + FSTATXX + TAXPROPX) - (FEDREFX + STATREFX + OTHREFX) *L BLS derived``` | 550 | NUM (8) |
| PERSTAX |  | 558 | CHAR(1) |
| POVERTY | Is CU income below current year's poverty threshold? (Income is defined as FINCBEFX <br> - FS_AMT) <br> CODED <br> 1 Yes <br> 2 No | 1548 | CHAR(1) |
| POVERTY |  | 1549 | CHAR(1) |
| ROOMX | During the past 12 months, how much net income or loss was received from roomers or boarders? *L | 584 | NUM (8) |
| ROOMX |  | 592 | CHAR(1) |
| UNEMPX | During the past 12 months, what was the total amount of income from unemployment compensation received by ALL CU members? | 644 | NUM (8) |
| UNEMPX |  | 652 | CHAR(1) |
| WELFRX | During the past 12 months, what was the total amount of income from public assistance or welfare including money received from job training grants such as Job Corps received by ALL CU members? | 659 | NUM(8) |
| WELFRX |  | 667 | CHAR(1) |

| WRKRSX | During the past 12 months, what was the <br> total amount of income from workers' <br> compensation or veterans' benefits, <br> including education benefits, but <br> excluding military retirement, received by <br> ALL CU members? | 678 | NUM(8) |
| :--- | :--- | :---: | :---: |
| WRKRSX_ |  | 686 | CHAR(1) |

3. Summary variable changes:

Please see the "Detailed Variable Descriptions" section for specific content changes

## B. MEMB file

Beginning in 2006Q1, the original (pre-income imputation) income variables will be added back onto the MEMB file. These variables will resume their former start positions.

| Variable name | Description | Start position | Format |
| :---: | :---: | :---: | :---: |
| ANFEDTXX | Annualized amount of Federal income tax deducted from last pay ((FEDTXX/GROSPAYX) x WAGEX) <br> BLS derived | 12 | NUM(8) |
| ANFE_TXX |  | 20 | CHAR(1) |
| ANGVX | Annualized amount of Government Retirement deducted from last pay ((GVX/GROSPAYX) x WAGEX) <br> BLS derived | 21 | NUM(8) |
| ANGVX |  | 29 | CHAR(1) |
| ANPVTX | Annualized amount of private pensions deducted from last pay ((PVTX/GROSPAYX) x WAGEX) <br> BLS derived | 30 | NUM(8) |
| ANPVTX |  | 38 | CHAR(1) |
| ANRRX | Annual amount of Railroad Retirement deducted from pay | 39 | NUM(8) |
| ANNRRX_ |  | 47 | CHAR(1) |
| ANSTATXX | Annualized amount of state and local income taxes deducted from last pay ((STATXX/GROSPAYX) x WAGEX) <br> BLS derived | 48 | NUM(8) |
| ANST_TXX |  | 56 | CHAR(1) |
| BSNSX | Amount of income or loss received from nonfarm business | 61 | NUM(8) |
| BSNSX |  | 69 | CHAR(1) |
| FARMX | Amount of income or loss received from own farm | 77 | NUM(8) |
| FARMX |  | 85 | CHAR(1) |
| JSSDEDX | Estimated annual Social Security contribution | 126 | NUM(6) |
| JSSDEDX |  | 132 | CHAR(1) |

| SLFEMPSS | Amount of self-employment Social Security contributions | 176 | NUM(6) |
| :---: | :---: | :---: | :---: |
| SLFE_PSS |  | 182 | CHAR(1) |
| SOCRRX | Annual amount of Social Security and Railroad Retirement income received by member in past 12 months <br> BLS derived | 233 | NUM(8) |
| SOCRRX |  | 241 | CHAR(1) |
| SS_RRX | What was the amount of the last Social Security or Railroad Retirement payment received? (In past 12 months) <br> S04A 7d | 183 | NUM(8) |
| SS_RRX |  | 191 | CHAR(1) |
| SUPPX | During the past 12 months, how much did the member receive in Supplemental Security Income checks altogether? (From U.S. Government and State or local Government) <br> S04A 8b | 203 | NUM(8) |
| SUPPX |  | 211 | CHAR(1) |
| WAGEX | Amount received from wage and salary income before deductions | 214 | NUM(8) |
| WAGEX |  | 222 | CHAR(1) |

## C. EXPN files

1. UCC DELETIONS

| UCC | TITLE |
| :---: | :--- |
| 170530 | OTHER NONCARB. BEVERAGE/ICE |
| 520111 | VEHICLE REGISTRATION - STATE |
| 520112 | VEHICLE REGISTRATION - LOCAL |
| 520913 | AI RCRAFT RENTAL |

2. UCC ADDITIONS

| UCC | TITLE |
| :---: | :--- |
| 170531 | OTHER NONCARB. BEVERAGE/ICE |
| 170532 | BOTLLED WATER |
| 170533 | SPORTS DRINKS |
| 520110 | STATE OR LOCAL VEHICLE REGISTRATION |

## D. DTAB files

## 1. DELETIONS

| UCC | TITLE |
| :--- | :--- |
| 950000 | FEDERAL INCOME TAX |
| 950010 | STATE/LOCAL INCOME TAX |

## 2. ADDITIONS

| UCC | TITLE |
| :--- | :--- |
| 950002 | FEDERAL INCOME TAX (DEDUCTED) |
| 950003 | ADDITIONAL FEDERAL I NCOME TAX (PAID) |
| 950012 | STATE/LOCAL INCOME TAX (DEDUCTED) |
| 950013 | ADDITI ONAL STATE/LOCAL I NCOME TAX (PAID) |

## III. FILE INFORMATION

The microdata on the CD-ROM are available as SAS data sets or ASCII text files. The 2006 Diary release contains five sets of data files (FMLY, MEMB, EXPN, DTAB, DTABD_IMPUTE) and three processing files. The FMLY, MEMB, EXPN, DTAB, and DTAB_IMPUTE files are organized by the quarter of the calendar year in which the data were collected. There are four quarterly data sets for each of these files. The FMLY files contain CU characteristics, income, and summary level expenditures; the MEMB files contain member characteristics and income data; the EXPN files contain detailed weekly expenditures at the UCC level; the DTAB files contains the CU's reported income values or the mean of the five imputed income values in the multiple imputation method; and the DTABD_IMPUTE files contain the five imputed income values.

The three processing files enhance computer processing and tabulation of data, and provide descriptive information on item codes. The three processing files are: an aggregation scheme file used in the published consumer expenditure tables (DSTUB), a UCC file that contains UCCs and their abbreviated titles, identifying the expenditure, income, or demographic item represented by each UCC, and a sample program file that contains the computer program used in Section VII.A. SAMPLE PROGRAM of the documentation. The processing files are further explained in Section III.E.5. PROCESSING FILES.

In addition to these processing files, there is a "User's Guide to Income Imputation in the CE", which includes information on how to appropriately use the imputed income data.

Note that the variable NEWID, the CU's identification number, is the common variable among files by which matching is done.

## A. DATA SET NAMES

The file naming convention in the ASCII subfolder is as follows:
(where " X " references the designated drive for your $C D$ )

```
\DIARY06\FMLYD061.txt
\DIARY06\MEMBD061.txt
\DIARY06\EXPND061.txt
\DIARY06\DTABD061.txt (Diary DTAB file for first quarter, 2006)
\DIARY06\DTABD_IMPUTED061.txt (Diary DTABD_IMPUTE file for, 2006 Q1)
\DIARY06\FMLYD062.txt (etc.)
\DIARY06\MEMBD062.txt
\DIARY06\EXPND062.txt
```

\DIARY06\DTABD062.txt
\DIARY06\DTABD_IMPUTED062.txt
\DIARY06\FMLYD063.txt
\DIARY06\MEMBD063.txt
\DIARY06\EXPND063.txt
\DIARY06\DTABD063.txt
\DIARY06\DTABD_IMPUTED063.txt
\DIARY06\FMLYD064.txt
\DIARY06\MEMBD064.txt
\DIARY06\EXPND064.txt
\DIARY06\DTABD064.txt
\DIARY06\DTABD_IMPUTED063.txt
\DIARY06\UCCD06.txt
The file naming convention in the SAS subfolder is as follows:

```
\DIARY06\FMLD061.sas7bdat (Diary FMLY file for first quarter, 2006)
\DIARY06\MEMD061.sas7bdat (Diary MEMB file for first quarter, 2006)
\DIARY06\EXPD061.sas7bdat (Diary EXPN file for first quarter, 2006)
\DIARY06\DTBD061.sas7bdat (Diary DTAB file for first quarter, 2006)
\DIARY06\DTBD_IMPUTED061.sas7bdat (Diary DTAB_IMPUTE file for, 2006 Q1)
\DIARY06\FMLD062.sas7bdat
\DIARY06\MEMD062.sas7bdat
\DIARY06\EXPD062.sas7bdat
\DIARY06\DTBD062.sas7bdat
\DIARY06\DTBD_IMPUTED062.sas7bdat
\DIARY06\FMLD063.sas7bdat
\DIARY06\MEMD063.sas7bdat
\DIARY06\EXPD063.sas7bdat
\DIARY06\DTBD063.sas7bdat
\DIARY06\DTBD_IMPUTED063.sas7bdat
\DIARY06\FMLD064.sas7bdat
\DIARY06\MEMD064.sas7bdat
\DIARY06\EXPD064.sas7bdat
\DIARY06\DTBD064.sas7bdat
\DIARY06\DTBD_IMPUTED064.sas7bdat
\DIARY06\UCCD06.txt
```

## B. RECORD COUNTS AND LOGICAL RECORD LENGTHS PER QUARTER

The following are number of records and the logical record lengths (LRECL) in each data set:

| ASCII data set | SAS data set | 2006 | 2006 |
| :---: | :---: | :---: | :---: |
|  |  | Record | LRECL |
|  |  | Count |  |
| FMLYD061.txt | FMLD061.sas7bdat | 3483 | 3087 |
| MEMBD061.txt | MEMD061.sas7bdat | 8583 | 773 |
| EXPND061.txt | EXPD061.sas7bdat | 136508 | 40 |
| DTABD061.txt | DTBD061.sas7bdat | 59851 | 28 |
| DTABD_IMPUTED061.txt | DTBD_IMPUTED061.sas7bdat | 90716 | 29 |
| FMLYD062.txt | FMLD062.sas7bdat | 3602 | 3087 |
| MEMBD062.txt | MEMD062.sas7bdat | 8930 | 773 |
| EXPND062.txt | EXPD062.sas7bdat | 143612 | 40 |
| DTABD062.txt | DTBD062.sas7bdat | 62257 | 28 |
| DTABD_IMPUTED062.txt | DTBD_IMPUTED062.sas7bdat | 93687 | 29 |
| FMLYD063.txt | FMLD063.sas7bdat | 3712 | 3087 |
| MEMBD063.txt | MEMD063.sas7bdat | 9339 | 773 |
| EXPND063.txt | EXPD063.sas7bdat | 147263 | 40 |
| DTABD063.txt | DTBD063.sas7bdat | 63756 | 28 |

| ASCII data set | SAS data set | 2006 <br> Record | $\underline{2006}$ <br>  <br>  <br> LRECL |
| :--- | :--- | ---: | ---: |
| DTABD_IMPUTED063.txt | DTBD_IMPUTED063.sas7bdat | $\underline{96066}$ | 29 |
| FMLYD064.txt | FMLD064.sas7bdat | 3658 | 3087 |
| MEMBD064.txt | MEMD064.sas7bdat | 9368 | 773 |
| EXPND064.txt | EXPD064.sas7bdat | 144684 | 40 |
| DTABD064.txt | DTBD064.sas7bdat | 62458 | 28 |
| DTABD_IMPUTED064.txt | DTBD_IMPUTED044.sas7bdat | 94178 | 29 |

## C. DATA FLAGS:

Data fields on the FMLY and MEMB files are explained by flag variables following the data field. The names of the flag variables are derived from the names of the data fields they reference. In general the rule is to add an underscore to the last position of the data field name, for example WAGEX becomes WAGEX_. However, if the data field name is eight characters in length, then the fifth position is replaced with an underscore. If this fifth position is already an underscore, then the fifth position is changed to a zero, so that PENSIONX becomes PENS_ONX, EDUC_REF becomes EDUCOREF.

The flag values are defined as follows:
A flag value of " A " indicates a valid blank; that is, a blank field where a response is not anticipated.

A flag value of " B " indicates a blank resulting from an invalid nonresponse; that is, a nonresponse that is not consistent with other data reported by the CU.

A flag value of "C" refers to a blank resulting from a "don't know", refusal, or other type of nonresponse.

A flag value of " D " indicates that the data field contains a valid or good data value.
A flag value of " T " indicates topcoding has been applied to the data field.
Some Primary Sampling Units (PSUs) in some states are given "false" STATE codes for nondisclosure reasons. See Section IV.A.CU CHARACTERISTICS AND INCOME FILE (FMLY) on topcoding of CU characteristics and income for more detail.

## D. INCOME IMPUTATION

Starting in 2004, the CE has implemented multiple imputation of income data. Imputation allows income values to be estimated when they are not reported. Many income variables and other income related variables will be imputed using a multiple imputation process. These imputed income values will be included in the FMLY, MEMB, DTAB, and DTAB_IMPUTE files. The multiple imputation process derives five imputation values, and a mean imputation value, per selected income variable. More information on the imputation process and how to appropriately use the data are found in the document "User's guide to Income Imputation in the CE".

In the public-use microdata, not all of the imputed income variables will contain the derived imputation values. For some income variables, the five derived imputations are excluded and only the mean of those imputations is available. For these variables, there are 3 associated income variables in the FMLY and MEMB files (INCOMEM, INCOMEM_, and INCOMEI). For all other imputed income variables, there are 7 associated variables in the FMLY and MEMB files:

INCOME1 - the first imputed income value or the reported income value, if non-missing
INCOME2 - the second imputed income value or the reported income value, if non-missing
INCOME3 - the third imputed income value or the reported income value, if non-missing
INCOME4 - the fourth imputed income value or the reported income value, if non-missing
INCOME5 - the fifth imputed income value or the reported income value, if non-missing
INCOMEM - the mean of the five imputed income values
INCOMEM_ - the flag variable for the imputed variable (see section III.C. Data Flags)
INCOMEI - the imputation indicator
Income variables that have imputed values as components (ex: FINCBEFM) will also have 5 imputed values and a mean based on each of the imputed components.

The imputation indicator variable is coded as follows:

| Value | Description |
| :--- | :--- |
| '100' | No multiple imputation - valid value, or valid blank <br> '201' |
| Multiple imputation due to invalid blank only |  |
| '301' | Multiple imputation due to bracketing only |
| '501' | Multiple imputation due to conversion of a valid blank to <br> an invalid blank (occurs only when initial values for all <br> sources of income for the CU were valid blanks) |
|  | s. |

The ITAB file includes income UCCs mapped from the associated INCOMEM variable in the FMLY files. The ITAB_IMPUTE file includes UCCs mapped from income variables subject to income imputation, including the variable IMPNUM to indicate the imputation number 1-5.

## E. FILE NOTATION

Every record from each data file includes the variable NEWID, the CU's unique identification number, which can be used to link records of one CU from several files.

Data fields for variables on the microdata files have either numeric or character values. The format column in the detailed variable descriptions (SECTION III.F. DETAILED VARIABLE DESCRIPTIONS) distinguishes whether a variable is numeric (NUM) or character (CHAR) and shows the number of field positions the variable occupies. Variables that include decimal points are formatted as NUM $(t, r)$ where $t$ is the total number of positions occupied, and $r$ is the number of places to the right of the decimal.

In addition to format, these detailed listings give an item description, questionnaire source, identification of codes where applicable, and start position for each variable. The questionnaire source,
which identifies where the data for that variable is collected on the characteristics questionnaire, is listed beneath the variable description and is formatted "S04B 2b", which denotes Section 4, Part B, Question 2 b of the characteristics questionnaire.

A star (*) is shown in front of new variables, those which have changed in format or definition, and those which have been deleted. Variables whose format has expanded are moved to the end of the file, and their original positions are left blank. New variables are added to the end of the files, after variables whose format has changed. The positions of deleted variables are left blank.

Some variables require special notation. The following notation is used throughout the documentation for all files:

* $D(Y x x q)$ identifies a variable that is deleted as of the quarterly file indicated. The year and quarter are identified by the ' $x x$ ' and ' $q$ ' respectively. For example, the notation *D(Y061) indicates the variable is deleted starting with the data file of the first quarter of 2006.
* $\mathrm{N}(\mathrm{Yxxq})$ identifies a variable that is added as of the quarterly file indicated. The year and quarter are identified by the ' $x x$ ' and ' $q$ ' for new variables in the same way as for deleted variables.
*L indicates that the variable can contain negative values.

## F. DETAILED VARIABLE DESCRIPTIONS

## 1. CONSUMER UNIT (CU) CHARACTERISTICS AND INCOME FILE (FMLY)

The "FMLY" file, also referred to as the "Consumer Unit Characteristics and Income" file, contains CU characteristics, CU income, and characteristics and earnings of the reference person and of the spouse. The file includes weights needed to calculate population estimates and variances. (See Sections V. ESTIMATION PROCEDURES and VI. RELIABILITY STATEMENT)

Summary expenditure variables in this file can be combined to derive weekly estimates for broad consumption categories. Demographic characteristics, such as family size, refer to the CU status on the date of the interview. Income variables contain annual values, covering the 12 months prior to the date of the interview. When there is a valid nonresponse, or where nonresponse occurs and there is no imputation, there will be missing values. The type of nonresponse is explained by associated data flag variables described in Section III.C. DATA FLAGS.

## m. SUMMARY EXPENDITURE DATA

The variables FOODTOT through HOUSKEEP contain summary expenditure data. They are all BLS derived. The UCCs comprising each summary expenditure variable are listed below the variable description. Underlined UCCs may not be represented in all Diary quarters. The quarter in which the addition (deletion) to the summary expenditure variable occurs is denoted by a leading superscript directly prior to the UCC code. For example, ${ }^{\text {N061 }<U C C>~ o r ~}{ }^{\text {D061 }<U C C>~ i d e n t i f i e s ~ a ~ n e w ~ o r ~ d e l e t e d ~ U C C ~}$ for a given summary expenditure variable beginning in Q061.

## 2. MEMBER CHARACTERISTICS AND INCOME FILE (MEMB)

The "MEMB" file, also referred to as the "Member Characteristics and Income" file, contains selected characteristics for each CU member, including identification of relationship to reference person. Characteristics for the reference person and spouse appear on both the MEMB file and FMLY file.

Demographic characteristic data, such as age of CU member, refer to the member status at the placement of each diary. Income data are collected for all CU members over 13 years of age. Income taxes withheld and pension and retirement contributions are shown both annually and as deductions from the member's last paycheck. Income variables contain annual values for the 12 months prior to the interview month. When there is a valid nonresponse, or where nonresponse occurs and there is no imputation, there will be missing values. The type of nonresponse is explained by associated data flag variables described in Section III.C. DATA FLAGS.

## a. CU AND MEMBER IDENTIFIERS

## 3. DETAILED EXPENDITURES (EXPN) FILE

In the "EXPN" file, each expenditure recorded by a CU in a weekly diary is identified by UCC, gift/nongift status, and day on which the expenditure occurred. UCC's are six digit codes that identify items or groups of items. (See Appendix 2.A for a listing of UCC's.) There may be more than one record for a UCC on a single day if that is what was reported in the diary. There are no missing values in this file. If no expenditure was recorded for the item(s) represented by a UCC, then there is no record for the UCC on file.

START

## 4. INCOME (DTAB) FILE

The "DTAB" file, also referred to as the "Income" file, contains CU characteristic and income data. This file is created directly from the FMLY file and contains the same annual and point-of-placement data. It was created to facilitate computer processing when linking CU income and demographic characteristic data with EXPN expenditure data. As such, the file structure is similar to EXPN. Each characteristic and income item is identified by UCC (See Section XIII.B for a listing of UCCs). There are no records with missing values in DTAB. If the corresponding FMLY file variable contained a missing value, there is no record for the UCC.

| VARIABLE | ITEM DESCRIPTION | START POSITION | FORMAT |
| :---: | :---: | :---: | :---: |
| NEWID | CU identification number. Digits 1-7 (CU sequence number, 1 through 9999999) uniquely identify the CU. Digit 8 is the week number, 1 or 2 | 1 | NUM(8) |

|  | CODED |  |  |
|  | 1 Not published |  |  |
|  | 2 Published in Integrated reports |  |  |
|  | BLS derived |  |  |

## 5. INCOME (DTAB IMPUTED) FILE

As a result of the introduction of multiply imputed income data in the Consumer Expenditure Survey, the ITAB_IMPUTE file is now on the Microdata. It is very similar to the ITAB file, except that the variable "IMPNUM" will indicate the number (1-5) of the imputation variant of the income variable and it only contains UCCs from variables subject to income imputation.

| VARIABLE | ITEM DESCRIPTION | START POSITION | FORMAT |
| :---: | :---: | :---: | :---: |
| NEWID | CU identification number. Digits 1-7 (CU sequence number, 1 through 9999999) uniquely identify the CU. Digit 8 is the week number, 1 or 2 | 1 | NUM(8) |

## 6. PROCESSING FILES

## a. Dstub file

X:IPrograms\Dstub.txt
The Dstub file shows the aggregation scheme used in the published consumer expenditure tables. It is formatted as follows:

START
DESCRIPTION
POSITION FORMAT
Type: represents whether information in this line contains aggregation data or not

1
CHAR(1)
4 CHAR(1)
7
CHAR(60)

| UCC: UCC number in the MTAB or ITAB file | 70 | CHAR(6) |
| :--- | :--- | :--- |
| Survey: Indicates survey source (I = interview, G = Aggregated item) | 80 | CHAR(1) |
| Group: Indicates if the item is and expenditure, income, or asset | 86 | CHAR(7) |

Note: this file is an internal BLS file used for processing expenditures. It has other information that may be ignored by users of the public use data.

## b. UCC file

## X:IDIARY06IUCCD06.TXT

The UCC file contains UCCs and their abbreviated titles, identifying the expenditure, income, or demographic item represented by each UCC. It is formatted as follows:

| DESCRIPTION | START <br> POSITION |  |
| :--- | :---: | :---: |
| UCO | 1 | CHAR (6) |
| UCC title | 8 | CHAR(50) |

See Section XIII.A. EXPENDITURE UCCS ON EXPN FILE and XIII.B. INCOME AND RELATED UCCS ON DTAB FILE for a list of UCCs and their full title by file - expenditure (EXPN) or income (DTAB)

## c. Sample program files

Interview program - Intrvw Mean and SE.sas
Diary program - Diary Mean and SE.sas
Integrated program - Integrated Mean and SE.sas
Interview Summary Variable program - Intrvw Sumvars.sas
The sample program file (X:IPROGRAMSIDiary Mean and SE.sas) contains the computer program used in Section VII.A. SAMPLE PROGRAM of the documentation. This file has been created to provide programming assistance.

## IV. TOPCODING AND OTHER NONDISCLOSURE REQUIREMENTS

Sensitive CU data are changed so that users will not be able to identify CUs who participated in the survey. Topcoding refers to the replacement of data in cases where the value of the original data exceeds prescribed critical values. Critical values for each variable containing sensitive data are calculated in accordance with Census Disclosure Review Board guidelines. Each observation that falls outside the critical value is replaced with a topcoded value that represents the mean of the subset of all outlying observations. All four quarters of data in the CE microdata release are used when calculating the critical value and topcode amount. If an observation is topcoded, the flag variable assigned to that observation is set to ' $T$ '.

Since the critical value and the mean of the set of values outside the critical value may differ with each annual (four-quarter) release, the topcode values may change annually and be applied at a different starting point. By topcoding values in this manner, the first moment will be preserved for each four-
quarter data release when using the total sample. This, however, will not be the case when means are estimated by characteristic, because topcode values are not calculated by characteristic.

## A. CU CHARACTERISTICS AND INCOME FILE (FMLY)

The following FMLY file variables are subject to topcoding.

| AGE_REF | Age of reference person |
| :---: | :---: |
| AGE2 | Age of spouse |
| ADDFEDX | Amount of Federal income tax paid in addition to that withheld |
| ADDOTHX | Amount of other taxes paid but not reported elsewhere |
| ADDSTAX | Amount of state and local income tax paid in addition to that withheld |
| ALIOTHX | Amount received from regular contributions by all CU members |
| ALIOTHXM, ALIOTHX1-5 LIOTHX | Amount received from regular contributions by all CU members |
| CHDLMPX | Amount received by all CU members for a lump sum child support payment in last 12 months |
| CHDOTHX | Amount received by all CU members in last 12 months for other child support |
| CHDOTHXM, CHDOTHX1-5 HDOTHX | Amount received by all CU members in last 12 months for other child support |
| DIVX | Amount received from dividends, royalties, estates, or trusts |
| DIVXM, DIVX1-5 | Amount received from dividends, royalties, estates, or trusts |
| DIVX |  |
| FEDREFX | Amount of refund from Federal income tax |
| INSREFX | Amount of refund from insurance policies |
| INTX | Amount received from interest on savings accounts, or bonds |
| INTXM, INTX1-5 | Amount received from interest on savings accounts, or bonds |
| INTX |  |
| LUMPX | Amount from lump sum payments from estates, trusts, royalties, alimony, child support, prizes, games of chance, or persons outside CU |
| OCCEXPNX | Amount paid by CU for occupational expenses, last 12 months |
| OTHINX | Amount from other money income, including money from care of foster children, cash scholarships and fellowships, or stipends, not based on working |
| OTHINXM, OTHINX1-5 OTHINX | Amount from other money income, including money from care of foster children, cash scholarships and fellowships, or stipends, not based on working |
| OTHREFX | Amount of refund from other sources, including any other taxes |
| OTHRNTX | Amount of net income or loss received from other rental units |
| OTHRNTXM, <br> OTHRNTX1-5 <br> OTHRNTX | Amount of net income or loss received from other rental units |
| PENSIONX | Amount received from pensions or annuities from private companies, military or government, IRA or Keogh |
| PENSIONM, PENSION1-5 | Amount received from pensions or annuities from private companies, military or government, IRA or Keogh |
| PENSIONX |  |
| PTAXREFX | Amount of refund from property taxes |
| ROOMX | Amount of net income or loss received from roomers or boarders |
| ROOMXM, ROOMX1-5 | Amount of net income or loss received from roomers or boarders |
| SALEX | Amount received from sale of household furnishings, equipment, clothing, jewelry, pets or other belongings, excluding sale of vehicles or property |
| SSREFX | Amount of refund from overpayment on Social Security |
| STATREFX | Amount of refund from state or local income tax |
| TAXPROPX | Amount of personal property taxes paid but not reported elsewhere |

The critical values and topcode values associated with the above variables follow. For multiply imputed income variables, it is possible for an upper topcode value to be less than the upper critical value or for a lower topcode value to be greater than the lower critical value.

| Variable | 2006 Upper critical value | 2006 Lower critical value | 2006 Upper topcode value | 2006 Lower topcode value |
| :---: | :---: | :---: | :---: | :---: |
| ALIOTHX | 35,000 | - | 70,350 |  |
| ALIOTHXM, |  |  |  |  |
| ALIOTHX1-5 | 35,000 | - | 48,329 | - |
| CHDLMPX | 4,350 | - | 19,867 | - |
| CHDOTHX | 18,000 | - | 29,700 | - |

| TAXPROPX | 1,000 | - | 1,773 | - |
| ADDFEDX | 30,000 | - | 60,443 | - |
| ADDOTHX | 9,000 | - | 16,827 | - |
| ADDSTAX | 8,403 | - | 21,750 | - |
| AGE_REF | 81 | - | 86 | - |
| AGE2 | 81 | - | 86 | - |

Some income variables that are subject to topcoding are constructed by summing up the values of "lower level" MEMB or FMLY file component variables. These variables are not topcoded by the conventional method of replacement with a topcode value. Instead the variables' components are summed normally and the variables are flagged as topcoded if one of their component variables is topcoded.

Following are the income variables that are calculated using values of their component variables. (See the descriptions of each variable in Sections III.E.1.e. INCOME - III.E.1.h. RETIREMENT AND PENSION DEDUCTIONS for a list of component variables.)

| EARNX | Amount of CU income from earnings before taxes |
| :--- | :--- |
| FBSNSXM, | Amount of income from non-farm business |
| FBSNSX1-5 |  |
| FBSNSX |  |
| FFARMXM, | Amount of income or loss received from own farm |
| FFARMX1-5 |  |
| FFARMX |  |
| FFEDTXX | Amount of Federal tax deducted from last pay, annualized for all CU members |
| FGVXM, | Amount of government retirement deducted from last pay, annualized for all CU members |
| FGVX1-5 |  |
| FGVX |  |
| FINCAFTM, | Amount of CU income after taxes |
| FINCAFT1-5 |  |
| FINCAFTX |  |
| FINCBEFM, | Amount of CU income before taxes |
| FINCBEF1-5 |  |
| FINCBEFX |  |
| FIRAX | Amount of money placed in individual retirement plan |
| FJSSDEDM, | Estimated amount of annual Social Security contribution |
| FJSSDED1-5 |  |
| FJSSDEDX |  |
| FPVTXM | Amount of private pension fund deducted from last pay, annualized for all CU members |
| FPVTX |  |
| FRRXM | Amount of Railroad Retirement deducted from last pay, annualized for all CU members |
| FRRX |  |
| FSTATXXM, | Amount of State and local income taxes deducted from last pay, annualized for all CU |
| FSTATXX1-5 | members |
| FSTATXX |  |
| FWAGEXM, | Amount received from wage and salary income before deduction |
| FWAGEX1-5 |  |
| FWAGEX |  |
| OTHRECX | Amount of other money receipts excluded from family income |
| PERSTAXM, | Amount of personal taxes paid |
| PERSTAX |  |

Here are some examples of situations that may occur. The value for the variable FBSNSXM (family income from nonfarm business) is computed as the sum of the values reported for the variable BSNSXM (member income from nonfarm business) from the MEMB file. BSNSXM is subject to topcoding beyond the critical value of $\$ 150,000(-\$ 9,999)$. The topcode value for BSNSXM is $\$ 142,690(-\$ 9,295)$.

## BSNSXM

| CU |  | REPORTED | $\begin{gathered} \text { AFTER } \\ \text { TOPCODING } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| CU 1: | MEMB1 | \$145,000 | \$145,000 |
|  | MEMB2 | 145,000 | 145,000 |
|  | MEMB3 | 20,000 | 20,000 |
| CU 2: | MEMB1 | 354,000 | 142,690 |
|  | MEMB2 | -15,000 | -9,295 |
|  | MEMB3 | -29,000 | -9,295 |
| CU 3 | MEMB1 | 155,000 | 142,690 |
|  | MEMB2 | 130,000 | 130,000 |
| CU 4 | MEMB1 | 140,000 | 140,000 |
|  |  |  | 72 |

## FBSNSXM

VALUE TOPCODED?

310,000
No

| MEMB2 | 140,000 | 140,000 |  |  |
| :--- | ---: | ---: | ---: | ---: |
| MEMB3 | $-300,000$ | $-9,295$ | 270,705 | Yes |

While CUs 1 and 2 each originally report a total of $\$ 310,00$ for all members in BSNSXM, topcoding is done only on the values reported by the members of CU2. Thus, the value for FBSNSXM for CU2 is lower than for CU1 and is flagged as topcoded while CU1 is not. By using the mean of the subset of observations that are above (below) the critical value as the topcode amount, values on the public use data can be either below or above the actual reported value. Note that while CU2 has a topcoded value below the reported value, CU3's topcoded FBSNSXM value $(\$ 272,690)$ is lower than the amount that it reported $(\$ 285,000)$. The case of CU4 demonstrates that the reported value for FBSNSXM can be negative, while the topcoded value can be positive. The reverse can also occur.

The value of the variable, STATE, which identifies state of residence, must be suppressed for some observations to meet the Census Disclosure Review Board's criterion that the smallest geographically identifiable area have a population of at least 100,000. STATE data were evaluated vis-àvis variables POPSIZE, REGION, and BLS_URBN, which show the population size of the geographic area that is sampled, the four Census regions, and the urban/rural status respectively. Some STATE codes were suppressed because, in combination with these variables, they could be used to identify areas of 100,000 or less. On approximately 17 percent of the records on the FMLY files the STATE variable is blank.

A small proportion of STATE codes are replaced with codes of states other than the state where the CU resides. By re-coding in this manner, suppression of POPSIZE and REGION may be avoided. (In past releases selected observations of POPSIZE and REGION also required suppression.) If an observation of a CU's state of residence is re-coded with another state's code, the flag variable.

| ${ }^{\text {RR }} 01$ | Alabama | *28 | Mississippi |
| :---: | :---: | :---: | :---: |

* indicates that the STATE code has been suppressed for all sampled CUs in that state.
** indicates that the STATE code has been suppressed for some sampled CUs in that state.
$R \quad$ indicates that either all observations from this state have been re-coded or all strata ${ }^{1}$ of observations from this state include "re-codes" from other states.
RR indicates that either some observations from this state have been re-coded or at least one stratum ${ }^{1}$ of observations from this state includes "re-codes" from other states.
$\mathrm{R}^{*}$ indicates that the STATE code has been suppressed for some sampled CUs in that state and, either STATE has been re-coded or the state includes "re-codes" from other states in all strata".
${ }^{\text {RR** }}$ indicates that the STATE code has been suppressed for some sampled CUs in that state and, either STATE has been re-coded or the state includes "re-codes" from other states in at least one stratum ${ }^{1}$.
${ }^{1}$ A STATE stratum is a unique POPSIZE and BLS_URBN combination.
States not listed are not in the CE sample.

## B. MEMBER CHARACTERISTICS AND INCOME FILE (MEMB)

The following MEMB file variables are subject to topcoding.

| AGE | Age of member |
| :--- | :--- |
| ANFEDTXX | Annual amount of Federal income tax deducted from pay |
| ANFEDTXM | Annual amount of Federal income tax deducted from pay |
| ANGVX | Annual amount of government retirement deducted from pay |
| ANGVXM | Annual amount of government retirement deducted from pay |
| ANPVTX | Annual amount of private pension fund deducted from pay |
| ANPVTXM | Annual amount of private pension fund deducted from pay |
| ANRRX | Annual amount of Railroad Retirement deducted from pay |
| ANRRXM | Annual amount of Railroad Retirement deducted from pay |
| ANSTATXX | Annual amount of state and local income taxes deducted from pay |
| ANSTATXM | Annual amount of state and local income taxes deducted from pay |
| BSNSX | Amount of income or loss received from nonfarm business |
| BSNSXM, | Amount of income or loss received from nonfarm business |
| BSNSX1-5 |  |
| FARMX | Amount of income or loss received from own farm |
| FARMXM, | Amount of income or loss received from own farm |
| FARMX1-5 |  |
| FEDTXX | Amount of Federal income tax deducted from last pay |
| GROSPAYX | Amount of last gross pay |
| GVX | Amount of government retirement deducted from last pay |
| IRAX | Amount of money placed in an individual retirement plan |
| JSSDEDX | Estimated annual Social Security contribution |
| JSSDEDXM, | Estimated annual Social Security contribution |
| JSSDEDX1-5 | Amount of private pension fund deducted from last pay |
| PVTX | Amount of Railroad Retirement deducted from last pay |
| RRX | Amount of self-employment Social Security contributions |
| SLFEMPSS | Amount of self-employment Social Security contributions |
| SLFEMPSM, | Amount |
| SLFEMPS1-5 |  |
| STATXX | Amount of state and local income taxes deducted from last pay |
| WAGEX | Amount received from wage and salary income before deductions |
| WAGEXM, | Amount received from wage and salary income before deductions |
| WAGEX1-5 |  |

The critical values and topcode values associated with the above variables follow. For multiply imputed income variables, it is possible for an upper topcode value to be less than the upper critical value or for a lower topcode value to be greater than the lower critical value.

| Variable | 2006 Upper <br> critical Value | 2006 Lower <br> critical Value | 2006 Upper <br> topcode value | 2006 Lower <br> topcode value |
| :--- | ---: | ---: | ---: | ---: |
| AGE | 81 | - | 86 | - |

| WAGEXM, WAGEX1-5 | 150,000 | - | 199,517 | - |

## Special suppression for MEMB file variables

The five MEMB file variables--FEDTXX, GVX, PVTX, RRX, and STATXX--describe deductions from the most recent pay. These variables are used in conjunction with GROSPAYX (amount of last gross pay) and WAGEXM (annual wage and salary income) to derive ANFEDTXM, ANGVXM, ANPVTXM, ANRRXM, and ANSTATXM, which represent the estimated annual deductions for each of these income deduction categories. For example, the estimated annual Federal income tax deduction from pay is calculated as
(1) $\quad$ ANFEDTXM $=(W A G E X M ~(F E D T X X / G R O S P A Y X))$.

Note that WAGEX can be estimated by using the above terms and rearranging such that
(2) $\quad$ WAGEXM $=($ ANFEDTXM $(G R O S P A Y X / F E D T X X))$.

In the above example, a problem with disclosure may arise when neither ANFEDTXM, GROSPAYX, nor FEDTXX (calculation components) are topcoded, but WAGEXM is. In this situation WAGEXM can be recalculated to obtain its original value by inserting the non-topcoded values into equation (2) and solving it. In order to prevent this, the non-topcoded terms in equation (2) will be suppressed (blanked out) and their associated flags will be assigned a value of ' $T$ '.

The following chart describes in detail the specific rules that are applied to prevent the potential disclosure outlined above.

If WAGEXM is greater than the critical value but ANFEDTXM, GROSPAYX, and FEDTXX are not, then the values for ANFEDTXM, GROSPAYX, and FEDTXX are suppressed and their flag variables are assigned a value of ' $T$ '.

If WAGEXM is greater than the critical value but ANGVXM, GROSPAYX, and GVX are not, then the values for ANGVXM, GROSPAYX, and GVX are suppressed and their flag variables assigned a value of ' $T$ '.

If WAGEXM is greater than the critical value but ANPVTXM, GROSPAYX, and PVTX are not, then the values for ANPVTXM, GROSPAYX, and PVTX are suppressed and their flag variables assigned a value of ' $T$ '.

If WAGEXM is greater than the critical value but ANRRXM, GROSPAYX, and RRX are not, then the values for ANRRXM, GROSPAYX, and RRX are suppressed and their flag variables assigned a value of ' $T$ '.

If WAGEXM is greater than the critical value but ANSTATXM, GROSPAYX, and STATXX are not, then the values for ANSTATXM, GROSPAYX, and STATXX are suppressed and their flag variables assigned a value of ' $T$ '.

The same special suppression for MEMB file variables occurs with the original (pre-income imputation) variables that correspond to the variables noted above (WAGEX, ANFEDTXX, etc)

## C. DETAILED EXPENDITURE FILE (EXPN)

The EXPN variable COST is subject to topcoding for the following UCCs.

## UCC Description

001000 Purchase price of stocks, bonds, mutual funds
009000 Mortgage payment including coop
210110 Rent of dwelling, includes parking fees
210210 Lodging away from home
210310 Housing for someone at school
210900 Ground or land rent
550320 Medical equipment for general use
550330 Supportive convalescent or medical equipment
560110 Physicians' services
560210 Dental services
560310 Eyecare services
560330 Lab tests and x-rays
560400 Service by professionals other than physicians
570000 Hospital care not specified
570220 Nursing or convalescent home care
570230 Other medical care service
570901 Rental of medical equipment
If the value of COST is greater (less) than the designated critical values for the above UCCs, COST is set to the topcode value and the associated flag variable, COST_, is set to ' T '. The critical values and topcode values (rounded to the nearest dollar) of the variable COST that are associated with the above UCCs follow.

|  |  |  |  | '3') |
| :---: | :---: | :---: | :---: | :---: |

## D. INCOME FILE (DTAB)

The DTAB variable AMOUNT is subject to topcoding for the following UCCs.

## UCC

900040
900050 Amount received from regular income from dividends, royalties, estates or trusts
900060 Amount received from net income or loss received from roomers or boarders
900070 Amount received from net income or loss received from other rental units
900080 Amount received from interest on savings accounts or bonds
900131 Amount received from other child support payments
900132 Amount received from other regular contributions, including alimony
900140 Amount received from other money income
910000 Amount received from lump sum payments from estates, trusts, etc.
910010 Amount received from money from sale household furnishings etc.
910020 Amount of overpayment on Social Security
910030 Amount of refund from insurance policies
910040 Amount of refunds from property taxes
910041 Amount received from lump sum child support payments received
950001 Amount received from federal income tax refunds
950003 Amount of additional federal income tax paid (not deducted)
950011 Amount received from state/local income tax refunds
950013 Amount of additional state/local income tax paid (not deducted)
950021 Amount of other taxes paid
950022 Amount of personal property taxes paid
950023 Amount of other tax refund received from other sources
980020 Age of reference person

If AMOUNT is greater (less) than the designated critical values for the above UCCs, AMOUNT is set to the topcode value and the associated flag variable, AMOUNT_, is set to ' T '. The critical values and topcode values (rounded to the nearest dollar) of the variable AMOUNT that are associated with the above UCCs follow.

| Variable | 2006 Upper critical value | 2006 Lower critical value | 2006 Upper topcode value | 2006 Lower topcode value |
| :---: | :---: | :---: | :---: | :---: |
| 900040 | 66,000 |  | 75,251 |  |
| 900050 | 85,000 | - | 180,938 | - |
| 900060 | 20,000 | -14,400 | 15,232 | -18,429 |
| 900070 | 27,000 | -5,000 | 30,321 | -4,465 |
| 900080 | 35,000 |  | 97,539 |  |
| 900131 | 18,000 | - | 23,689 |  |
| 900132 | 35,000 | - | 48,329 |  |
| 900140 | 28,400 | - | 25,098 | - |
| 910000 | 180,000 | - | 620,000 |  |
| 910010 | 10,000 | - | 52,889 |  |
| 910020 | 2,265 |  |  |  |
| 910030 | 800 | - | 4,225 |  |
| 910040 | 2,000 | - | 3,420 |  |
| 910041 | 4,350 | - | 19,867 | - |
| 950001 |  | -7,100 | - | -12,438 |
| 950003 | 30,000 |  | 60,443 |  |
| 950011 | - | -2,000 | - | -3,862 |
| 950013 | 8,403 |  | 21,750 |  |
| 950021 | 9,000 | - | 16,827 |  |
| 950022 | 1,000 | - | 1,773 | - |
| 950023 | - | -2,700 | - | -5,717 |
| 980020 | 81 | - | 86 | - |

${ }^{1}$ ADDFEDX (amount of Federal tax paid in addition to that withheld) and FFEDTXX (Federal tax withheld from last pay annualized for all CU members) are mapped to UCCs 950003 and 95002 , respectively, as separate records. Records for UCC 950002 that represent FFEDTXX are topcoded through their components (ANFEDTXM) at the MEMB level and thus, these records will not have a DTAB critical value. DTAB records for UCC 950003 that represent ADDFEDX are topcoded for all amounts greater than $\$ 30,000$.
${ }^{2}$ ADDSTAX (amount of state and local taxes paid in addition to that withheld) and FSTATXX (state and local income tax deduction from last pay annualized for all CU members) are mapped to UCCs 950013 and 950012, respectively, as separate records. Records for UCC 950012 that represent FSTATXX are topcoded through their components (ANSTATXM) at the MEMB level and thus, these records will not have a DTAB critical value. Create the DTAB VALUE field for these records by dividing FSTATXX by 12. If FSLTAXX is topcoded, then set VALUE to ' $T$ '. DTAB records for UCC 950013 that represent ADDSTAX are topcoded for all amounts greater than $\$ 5,000$.

AMOUNT for the following UCC's is topcoded because the FMLY file variables corresponding to these UCC's are topcoded due to recalculation. (See Section IV.A. CU CHARACTERISTICS AND INCOME FILE on topcoding of FMLY variables.)

| UCC | FMLY variable | Description |
| :---: | :---: | :---: |
| 800910 | FGVXM, FGVX | Amount of government retirement deducted from last pay, annualized for all CU members |
| 800920 | FRRXM ,FRRX | Amount of Railroad Retirement deducted from last pay, annualized for all CU members |
| 800931 | FPVTXM, FPVTX | Amount of private pension fund deducted from last pay, annualized for all CU members |
| 800932 | FIRAX | Amount of money placed in individual retirement plan |
| 800940 | FJSSDEDM, FJSSDED1-5, FJSSDEDX | Estimated amount of annual Social Security contribution |
| 900000 | FWAGEXM, FWAGEX1-5, FWAGEX | Amount received from wage and salary income before deduction |
| 900010 | FBSNSXM, FBSNSX1-5, FBSNSX | Amount of income from non-farm business |
| 900020 | FFARMXM, | Amount of income or loss received from own farm 78 |

|  | FFARMX1-5, |
| :--- | :--- |
| FFARMX |  |
| 980000 |  |
| FINCBEFM, |  |
|  | FINCBEF1-5, |
| FINCBEFX |  |
| 980070 | FINCAFTM, |
| FINCAFT1-5, |  |
| FINCAFTX |  |$\quad$ Amount of CU income before taxes

## V. ESTIMATION PROCEDURE

This section provides users of the CE Diary microdata files with procedures for estimating means and variances of data associated with any U.S. subpopulation. The production of Consumer Expenditures in 2006 used an integration methodology which incorporated information from both Diary and Interview Surveys. Diary data users will not be able to match published CE estimates because of this. In addition, users will not be able to match all values because of suppression of some values, due to topcoding. See the topcoding and other nondisclosure requirements in Section IV.

## A. DEFINITION OF TERMS

Consider the following general situation. We wish to estimate expenditures on certain food items for a special group (subpopulation) of U.S. CUs; for example, all CUs of three persons. Our specific objective is to estimate the expenditures for item $k$ over a period of $q$ months, where data collected over $r$ months are used in the estimate. The following definitions will be helpful in formulating the above type of estimate.

## Definition of Terms:

Let
$S=$ all CUs in the subpopulation of interest
$x$ = expenditure item(s) of interest
$q$ = number of months for which estimate is desired
$r$ = number of months in which expenditures were made to be used in calculating the estimate
D = number of days in each of the months in which expenditures were made
$j=$ individual CU in subpopulation S
$t=$ month of expenditure
Then
$\mathrm{X}_{(j, k, t)} \quad=$ the amount of money $\mathrm{CU}_{(j)}$ spent on item $k$ for a week during month $t$
$\mathrm{W}_{(j, t, F 21)}=$ the weight assigned to $\mathrm{CU}_{(j)}$ during month $t$
The F21 denotes FINLWT21 which is used for population estimates.
NOTE: The CUs on the Diary Survey microdata files represent the U.S. population. Some CUs represent more of the population than others; and hence carry more weight. The weight, $\mathrm{W}_{(j, t, F 21)}$, is a complex estimate of this representation. Refer to Section X.C. WEIGHTING for an explanation of weights. The weights have been adjusted so that the sum of all CU weights for one month approximates one third of the U.S. population. Consequently, the weights for three months (one quarter) of data approximate the total U.S. population.

Using the above terminology, we may define:
$X_{(S, k)(q, r)}$ as an estimate for the expenditures of subpopulation $S$ on item $k$ over a period of $q$ months, where data collected over $r$ months are used.
and
$\bar{X}_{(S, k)(q, r)}$ as an estimate of the mean expenditures of subpopulation $S$ on item $k$ over a period of $q$ months, where data collected over $r$ months are used.

## B. ESTIMATION OF TOTAL AND MEAN EXPENDITURES

As an example, let us estimate total expenditures on milk (item $k$ ) of subpopulation $S$ over a 12month period. Data collected over 6 months will be used to make the estimate. Users may use less than 12 months of data to perform seasonal calculations. In the notation described above, the estimate is $\mathrm{X}_{(\mathrm{S}, k)(12,6)}$.

$$
\begin{equation*}
X_{(S, k)(12,6)}=3(12 / 6) \sum_{t=1}^{6}\left(\sum_{j=1}^{n}\left(\frac{D_{(t)}}{7}\right) W_{(j, t, F 21)} X_{(j, k, t)}\right)_{t} \tag{1a}
\end{equation*}
$$

where the inner summation sums expenditures for all $j$ in $S$, indexed from $j=1$ through $n$ and the outer summation sums over months $t=1$ through 6 . The factor " 3 " compensates for the fact that the weights for the CUs visited in one month have been adjusted to represent one third of the U.S. population. The factor " 12 " reflects our desire to estimate expenditures over a 12-month period; and the " 6 " is the adjustment made because data for 6 months are used. Since the data $X_{(j, k, t)}$ are in terms of weekly expenditures, the factors, (number of days in the month)/7, are used to convert weekly expenditures into their monthly equivalents.

The above formula can be generalized to estimate the total expenditures of subpopulation $S$ on item $k$ for $q$ months, but using data collected over $r$ months. The generalization is

$$
\begin{equation*}
X_{(S, k)(q, r)}=3(q / r) \sum_{t=1}^{r}\left(\sum_{j=1}^{n}\left(\frac{D_{(t)}}{7}\right) W_{(j, t, F 21)} X_{(j, k, t)}\right)_{t} \tag{1b}
\end{equation*}
$$

where the inner summation sums expenditures for all $j$ in $S$, indexed from $j=1$ through $n$ and the outer summation sums over months $t=1$ through $r$.

An estimate for the expenditures for two or more items may be obtained by summing those expenditures at the CU level and then proceeding as before.

The next example will give an estimate, $\bar{X}_{(S, k)(12,6)}$, of mean expenditures over twelve months $(q)$, on item $k$, of CUs in subpopulation $S$, where data collected over a six month period $(r)$ are used. The result is

$$
\begin{equation*}
\bar{X}_{(S, k)(12,6)}=\frac{3(12 / 6) \sum_{t=1}^{6}\left(\sum_{j=1}^{n}\left(\frac{D_{(t)}}{7}\right) W_{(j, t, F 21)} X_{(j, k, t)}\right)_{t}}{\frac{3 \sum_{t=1}^{6}\left(\sum_{j=1}^{n} W_{(j, t, F 21)}\right)_{t}}{6}} \tag{2a}
\end{equation*}
$$

where the numerator is an estimate of aggregate expenditures as formulated in equation (1a), and where the denominator is an estimate of the population of CUs in the U.S. during the six-month period for which the expenditure data are collected. The inner summation in the denominator of (2a) sums FINLWT21 for a given month $(t)$, for all $j$ in $S$, indexed from $j=1$ through $n$, and the outer summation in the denominator of (2a) sums over months $t=1$ through 6. As in the estimate of aggregate expenditures, the factor " 3 " to the left of the outer summation in the denominator of equation (2a) adjusts FINLWT21 to represent the entire population for each month of data used. The proper U.S. population count is arrived at by dividing the denominator by $r$, or in this case " 6 ", (representing the 6 month period of collected data in this example).

The above formula generalizes to $\bar{X}_{(S, k)(q, k)}$, (i.e., the estimate of the mean expenditure by subpopulation $S$ on item $k$ for $q$ months using data collected over $r$ months). In detail:

$$
\begin{equation*}
\bar{X}_{(S, k)(q, r)}=\frac{q \sum_{t=1}^{r}\left(\sum_{j=1}^{n}\left(\frac{D_{(t)}}{7}\right) W_{(j, t, F 21)} X_{(j, k, t)}\right)_{t}}{\sum_{t=1}^{r}\left(\sum_{j=1}^{n} W_{(j, t, F 21)}\right)_{t}} \tag{2b}
\end{equation*}
$$

Note: The factors " 3 " (adjustment of FINLWT21 to one U.S. population) and " 6 ", (number of months, $r$, for which the data are collected), which appear both in the numerator and the denominator of (2a), cancel. These scalars are dropped from the general form of $\bar{X}_{(S, k)(q, r)}$.

The estimates for total ( $X_{(S, k)(q, r)}$ ) and mean expenditures ( $\bar{X}_{(S, k)(q, r)}$ ) are based on all CUs; not just the CUs with positive expenditures for item $k$. Consider the calculation for the mean expenditure of tobacco. The formula $\bar{X}_{(S, k)(q, r)}$ includes all CUs, both smoking and nonsmoking. One might be more interested in the mean expenditures on tobacco but only for those CUs that actually have expenditures. This can be accounted for by properly defining the initial subpopulation $S$ so as to restrict it to CUs with positive tobacco expenditures.

## C. ESTIMATION OF MEAN ANNUAL INCOME

Let $\bar{Z}_{(S, r)}$ be an estimate of the mean annual income of CUs in subpopulation S , where income data collected over $r$ months is to be used.

Let $Z_{(j, t)}=$ the annual income reported by $\mathrm{CU}_{(j)}$ in month $t$. Then the estimated mean annual income is

$$
\bar{Z}_{(S, r)}=\frac{\sum_{t=1}^{r}\left(\sum_{j=1}^{n} W_{(j, t, F 21)} Z_{(j, t)}\right)_{t}}{\sum_{t=1}^{r}\left(\sum_{j=1}^{n} W_{(j, t, F 21)}\right)_{t}}
$$

## VI. RELIABILITY STATEMENT

## A. DESCRIPTION OF SAMPLING ERROR AND NONSAMPLING ERROR

Sample surveys are subject to two types of errors, sampling and nonsampling. Sampling errors occur because observations are not taken from the entire population. The standard error, which is the accepted measure for sampling error, is an estimate of the difference between the sample data and the data that would have been obtained from a complete census. The sample estimate and its estimated standard error enables one to construct confidence intervals.

Assuming the Normal Distribution applies to the means of expenditures, the following statements can be made:
(1) The chances that an estimate from a given sample would differ from a complete census figure by less than one standard error are approximately 68 out of 100 .
(2) The chances that the difference would be less than 1.6 times the standard error are approximately 90 out of 100 .
(3) The chances that the difference would be less than two times the standard error are approximately 95 out of 100 .

Nonsampling errors can be attributed to many sources, such as definitional difficulties, differences in the interpretation of questions, inability or unwillingness of the respondent to provide correct information, mistakes in recording or coding the data obtained, and other errors of collection, response, processing, coverage, and estimation for missing data. The full extent of the nonsampling error is unknown. Estimates using a small number of observations are less reliable. A small amount of nonsampling error can cause a small difference to appear significant even when it is not. It is probable that the levels of estimated expenditure obtained in the Diary Survey are generally lower than the "true" level due to the above factors.

## B. ESTIMATING SAMPLING ERROR

## 1. VARIANCE ESTIMATION

Variance estimation can be done in many ways. The method illustrated below (a pseudoreplication technique) is chosen because it is accurate yet simple to understand. The basic idea is to artificially construct several "subsamples" from the original sample data. This construction is done in a manner so that the variance information of the original data is preserved in these subsamples. These subsamples (or pseudo-replications) can then be used to obtain approximate variances for the estimates.

The Diary microdata files contain information that facilitates this form of variance estimation procedure. Specifically, 45 weights are associated with each CU. The forty-fifth weight, called FINLWT21 at BLS, (which is the weight for the total sample) is used for estimations of total or mean expenditures. The other weights (replicates 1 through 44) are used for variance estimation of the totals or means. Note that half of the weights in each replicate are zero. This reflects the fact that in this technique only half the CUs are used in each of the 44 pseudo-replicates. Recall that $X_{(S, k)(q, r)}$ is an estimate for the expenditures of subpopulation $S$ on item $k$ over a period of $q$ months, where data collected over $r$ months are used. This notation does not reveal the fact that 45 replicate weights are to be used for estimation of variance. We expand the notation to include this information. Specifically, let

$$
\begin{aligned}
& X_{(S, k)(q, r), a}=\text { an estimate of the same quantity as } X_{(S, k)(q, r)} \text {, but using the weights of the } \mathrm{a}^{\text {th }} \\
& \text { replicate. }
\end{aligned}
$$

That is $X_{(S, k)(q, r), a}$ is an estimate of the total expenditures by CUs in subpopulation $S$ on item $k$ over $q$ months using $r$ months of collection data, and where the weights from the $a^{\text {th }}$ replicate are used. Note that the estimate using any one of the first 44 replicate weights only uses part of the data; hence in general $X_{(S, k)(q, r), a}$ is not equal to $X_{(S, k)(q, r)}$.

An estimate for the variance of $X_{(S, k)(q, r)}$ (denoted by $V\left(X_{(S, k)(q, r)}\right)$ can be calculated using the following formula:

$$
V\left(X_{(S, k)(q, r)}\right)=\frac{1}{44} \sum_{a=1}^{44}\left(X_{(S, k)(q, r), a}-X_{(S, k)(q, r)}\right)^{2}
$$

Estimates for the variances of $\bar{X}_{(S, k)(q, r)}$ and $\bar{Z}_{(S, r)}$ are similar and are given below.

$$
V\left(\bar{X}_{(S, k)(q, r)}\right)=\frac{1}{44} \sum_{a=1}^{44}\left(\bar{X}_{(S, k)(q, r), a}-\bar{X}_{(S, k)(q, r)}\right)^{2}
$$

and

$$
V\left(\bar{Z}_{(S, r)}\right)=\frac{1}{44} \sum_{a=1}^{44}\left(\bar{Z}_{(S, r), a}-\bar{Z}_{(S, r)}\right)^{2}
$$

where $\bar{X}_{(S, k)(q, r), a}$ and $\bar{Z}_{(S, r), a}$ are estimates similar to $\bar{X}_{(S, k)(q, r)}$ and $\bar{Z}_{(S, r)}$ except weights of the a th replicates are used.

## 2. STANDARD ERROR OF THE MEAN

The standard error of the mean, S.E. ( $\bar{X}$ ), is defined as the square root of the variance of the mean. S.E. ( $\bar{X}$ ), is used to obtain confidence intervals that evaluate how close the estimate may be to the true population mean. A 95 percent confidence interval can be constructed around an estimate, bounded by values 1.96 times the standard error less than and greater than the estimate. For example, the average weekly expenditure for beef for All CUs in 2006 was $\$ 4.38$. The standard error for this estimate is $\$ 0.11$. Hence, the 95 percent confidence interval around this estimate is from $\$ 4.16$ to $\$ 4.60$. Therefore, we could conclude with 95 percent confidence that the mean weekly expenditures for beef all CUs in 2006 lies within the interval $\$ 4.16$ to $\$ 4.60$.

## 3. STANDARD ERROR OF THE DIFFERENCE BETWEEN TWO MEANS

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common types of hypotheses are: 1) the population parameters are identical; versus 2 ) they are different.

For example, in 2006 the estimated average weekly expenditures for total food for CUs in the $\$ 30,000$ to $\$ 39,999$ income range is $\$ 84.48$ and the estimate for CUs in the $\$ 40,000$ to $\$ 49,999$ income range is $\$ 96.40$. The apparent difference between the two mean expenditures is $\$ 96.40-\$ 84.48=$ $\$ 11.92$. The standard error on the estimate of $\$ 84.48$ is $\$ 2.25$ and the estimated standard error for the $\$ 94.00$ estimate is $\$ 2.96$. The standard error (S.E.) of a difference is approximately equal to

$$
\text { S.E. }\left(\bar{X}_{1}, \bar{X}_{2}\right)=\sqrt{\left(V\left(\bar{X}_{1}\right)+V\left(\bar{X}_{2}\right)\right)}
$$

where

$$
V\left(\bar{X}_{i}\right)=\left(\text { S.E. }\left(\bar{X}_{i}\right)\right)^{2}
$$

This assumes that $\bar{X}_{1}$ and $\bar{X}_{2}$ are disjoint subsets of the population. Hence, the standard error of the difference in food expenditures between CUs in the $\$ 30,000$ to $\$ 39,999$ and in the $\$ 40,000$ to $\$ 49,999$ income ranges is about

$$
\sqrt{\left((2.25)^{2}+(2.96)^{2}\right)}=3.72
$$

This means that the 95 percent confidence interval around the difference is from $\$ 4.63$ to $\$ 19.21$. Since this interval does not include zero, we can conclude with 95 percent confidence that the mean weekly food expenditures for the $\$ 40,000$ to $\$ 49,999$ income group is greater than the mean weekly food expenditures for the $\$ 30,000$ to $\$ 39$, 999 income group.

Analyses of the difference between two estimates can also be performed on nondisjoint sets of population, where one is a subset of the other. The formula for computing the standard error (S.E.) of the difference between two nondisjoint estimates is

$$
\text { S.E. }\left(\bar{X}_{1}, \bar{X}_{2}\right)=\sqrt{\left(V\left(\bar{X}_{1}\right)+V\left(\bar{X}_{2}\right)-2 r\left(V\left(\bar{X}_{1}\right) * V\left(\bar{X}_{2}\right)\right)\right)}
$$

where

$$
V\left(\bar{X}_{i}\right)=\left(\text { S.E. }\left(\bar{X}_{i}\right)\right)^{2}
$$

and where $r$ is the correlation coefficient between $\bar{X}_{1}$ and $\bar{X}_{2}$. The correlation coefficient is generally no greater than 0.2 for CE estimates.

## VII. MICRODATA VERIFICATION AND ESTIMATION METHODOLOGY

This section is designed to help users become familiar with the microdata files. The following program gives users a benchmark to verify that their copy of the CD-ROM contains valid data, illustrate the methodology CE uses in producing publication tables, and offer an example of coding to access the data and produce a sample table. The program is written in SAS and shows usage of the SAS datasets available on the SAS CD-ROM. A program written in SAS but utilizing the ASCII datasets is present on the ASCII CD-ROM but will not be referenced here. Refer to the output file on the CD to check output. (Note: CE data published by BLS may not match some values estimated using the microdata due to topcoding of data and CE publication programming methodology.) All variables and ranges referred to in the program are described in detail in Section III.E. DETAILED VARIABLE DESCRIPTIONS in this documentation.

This program produces a table of selected expenditures by income class of the Consumer Unit (CU). The first section reads in the processing file and manipulates it into a usable form suitable for formatting an expenditure table. The second section of the program extracts the relevant variables from the FMLY files, while the third section extracts the expenditure and income data from the EXPN and DTAB files. These three datasets are then used along with the Dstub processing file to construct the sample table output. This output is the product of two SAS arrays. The values in one array are divided by the value in the other array to obtain weighted mean expenditures. The base, or denominator, for the division is a vector consisting of the weighted total population for the U.S. and selected income class categories. The numerator is a matrix of aggregate weighted costs for each line item in the table for the total U.S. population and each income class category.

It should be emphasized that this program has been written solely for the verification of the microdata and as an illustration of the CE estimation methodology. It should not be used for any other purpose.

Note: This program processes large amounts of data. If you are using a PC with limited capabilities it may be necessary to run this program in sections.

## VIII. DESCRIPTION OF THE SURVEY

The CE program consists of two separate components, each with its own questionnaire and independent sample:

1) A Diary or recordkeeping survey completed by the sample CUs for two consecutive 1 -week periods; the sample is surveyed across a 12 -month period.
2) An Interview panel survey in which each CU in the sample is interviewed once every 3 months over five consecutive quarters to obtain a year's worth of data. New panels are initiated every month of the year.

Data are collected by the Bureau of the Census under contract with BLS. All data collected in both surveys are subject to Bureau of the Census confidentiality requirements, which prevent the disclosure of the CU member's identity.

The Diary survey collects expenditure data for items purchased each day over two one-week periods. This survey is designed to collect expenditure data for small, frequently purchased items such as food, beverages, food consumed away from home, gasoline, housekeeping supplies, nonprescription drugs and medical supplies, and personal care products and services. Respondents are not limited to recording expense for these items only.

A Household Characteristics Questionnaire is completed to record demographic and family characteristics data pertaining to age, sex, race, marital status, and CU relationships each CU member. Income information, such as wage, salary, unemployment compensation, child support, and alimony, as well as information on the employment of each CU member age 14 and over is collected. The expenditure collection instrument is a self-reporting, product-oriented diary on which respondents record all expenses for two consecutive one-week periods. It is divided by day of purchase and by broad classification of goods and services, a format designed to aid the respondents when recording daily purchases.

At the beginning of the two-week collection period, the interviewer uses the Household Characteristics Questionnaire to record demographic and characteristics information pertaining to CU members. Also at this time, a diary for the first week is left with the participating CU. At the completion of the first week, the interviewer picks up the diary, reviews the entries, clarifies any questions, and leaves a second diary for the following week. At the end of the second week, the diary is picked up and reviewed. At this point, the interviewer again uses the Household Characteristics Questionnaire to collect information on CU income, employment and earnings of CU members. These data, along with the other
household characteristics information, permit data users to classify sample units for research purposes, and allow BLS to adjust population weights for CUs who do not cooperate in the survey.

## IX. DATA COLLECTION AND PROCESSING

In addition to its data collection duties, the Bureau of the Census is responsible for field editing and coding, consistency checking, quality control, and data transmittal to BLS. BLS performs additional review and editing procedures in preparing the data for publication and release.

## A. BUREAU OF THE CENSUS ACTIVITIES

Data collection activities have been conducted by the Bureau of the Census on a continuing basis since October 1979. Due to differences in format and design, the Diary Survey and the Interview Survey data are collected and processed separately. Preliminary Diary survey data processing carried out by the Bureau of the Census includes programming the Computer Assisted Personal Interview (CAPI) instrument used to collect household characteristics, keying the expenditure data from the diary questionnaire, clerical data editing, and correcting for inconsistencies in the collected data.

The data collected on household characteristics using CAPI are sent directly to the Census Demographic Surveys Division (DSD). Upon completion of the written questionnaire by respondents, the diaries are sent from the regional offices to the Census National Processing Center (NPC) in Jeffersonville, IN. At the NPC, the expenditure data are keyed and codes are applied. The keyed expenditure data are sent to DSD, where they are merged with the household characteristic data. Inconsistencies and errors in the combined data are identified and corrected.

After clerical processing at the NPC, the data are transmitted to the Census Processing Center in Suitland, MD, where they pass through basic quality checks of control counts, missing values, etc. The data are then electronically transmitted to BLS in Washington, DC.

## B. BUREAU OF LABOR STATISTICS ACTIVITIES

Upon receipt from the Bureau of the Census, the data undergo a series of computer edits that identify and correct irregularities and inconsistencies. Other adjustments apply appropriate sales taxes and derive CU weights based on BLS specifications. In addition, demographic and work experience items are imputed when missing or invalid. All data changes and imputations are identified with flags on the Interview data base.

Next, BLS conducts an extensive review to ensure that severe data aberrations are corrected. The review takes place in several stages: a review of counts, weighted means, and unweighted means by region; a review of family relationship coding inconsistencies; a review of selected extreme values for expenditure and income categories; and a verification of the various data transformations.

Cases of extreme data values are investigated by reviewing images of the questionnaires. Errors discovered through this procedure are corrected prior to release of the data.

Two major types of data adjustment routines-imputation and allocation--are carried out to improve and classify the estimates derived from the Diary Survey. Data imputation routines correct for missing or invalid entries among selected CU characteristic fields. Allocation routines are applied when respondents provided insufficient expenditure detail to meet tabulation requirements. For example, reports of combined expenditures for fuels and utilities are allocated among gas, electricity, and other items in this group. To analyze the effects of these adjustments, tabulations are made before and after the data adjustments.

## X. SAMPLING STATEMENT

## A. SURVEY SAMPLE DESIGN

Samples for the CE are national probability samples of households designed to be representative of the total U. S. civilian population. Eligible population includes all civilian noninstitutional persons.

The first step in sampling is the selection of primary sampling units (PSUs), which consist of counties (or parts thereof) or groups of counties. The set of sample PSUs used for the 2006 sample is composed of 91 areas. The design classifies the PSUs into four categories:

- 21 "A" certainty PSUs are Metropolitan Statistical Areas (MSA's) with a population greater than 1.5 million.
- 38 "X" PSUs, are medium-sized MSAs.
- 16 "Y" PSUs are nonmetropolitan areas that are included in the CPI.
- 16 "Z" PSUs are nonmetropolitan areas where only the urban population data will be included in the CPI.

The sampling frame (that is, the list from which housing units were chosen) for the 2006 survey is generated from the 2000 Population Census file. The sampling frame is augmented by new construction permits and by techniques used to eliminate recognized deficiencies in census coverage. All Enumeration Districts (EDs) from the Census that fail to meet the criterion for good addresses for new construction, and all EDs in nonpermit-issuing areas are grouped into the area segment frame.

To the extent possible, an unclustered sample of units is selected within each PSU. This lack of clustering is desirable because the sample size of the Diary Survey is small relative to other surveys, while the intraclass correlations for expenditure characteristics are relatively large. This suggests that any clustering of the sample units could result in an unacceptable increase in the within-PSU variance and, as a result, the total variance.

Each selected sample unit is requested to keep two 1-week diaries of expenditures over consecutive weeks. The earliest possible day for placing a diary with a household is predesignated with each day of the week having an equal chance to be the first of the reference week. The diaries are evenly spaced throughout the year.

## B. COOPERATION LEVELS

The annual target sample size at the United States level for the Diary Survey is 7,200 participating sample units. To achieve this target the total estimated work load is 12,200 sample units. This allows for refusals, vacancies, or nonexistent sample unit addresses.

Each participating sample unit selected is asked to keep two 1-week diaries. Each diary is treated independently, so response rates are based on twice the number of housing units sampled.

The response rate for the 2006 Diary Survey is $74.2 \%$ as shown below. This response rate refers to all diaries in the year.

| Number of <br> diaries designated <br> for the survey | Type B or C <br> ineligible cases | Number of <br> potential diaries | nonsing unit interviews <br> Type A | Total respondent <br> nonterviews |
| :---: | :---: | :---: | :---: | :---: |
| 24,320 | 4,844 | 19,476 | 5,021 | 14,455 |

Type B or C cases are housing units that are vacant, nonexistent, or ineligible for diary placement. Type A nonresponses are housing units which the interviewers were unable to contact or the respondents refused to participate in the survey. The response rate stated above is based only on the eligible housing units (i.e., the designated sample cases less type B and type C ineligible cases).

## C. WEIGHTING

Each CU included in the CE represents a given number of CUs in the U.S. population, which is considered to be the universe. The translation of sample families into the universe of families is known as weighting. However, since the unit of analysis for the CE is a CU, the weighting is performed at the CU level. Several factors are involved in determining the weight for each CU for which a diary is obtained. There are four basic steps in the weighting procedure:

1) The basic weight is assigned to an address and is the inverse of the probability of selection of the housing unit.
2) A weight control factor is applied to each diary if subsampling is performed in the field.
3) A noninterview adjustment is made for units where data could not be collected from occupied housing units. The adjustment is performed as a function of region, housing tenure, family size and race.
4) A final adjustment is performed to adjust the sample estimates to national population controls derived from the Current Population Survey. The adjustments are made based on both the CU's member composition and on the CU as a whole. The weight for the CU is adjusted for individuals within the CU to meet the controls for the 14 age/race categories, 4 regions, and 4 region/urban categories. The CU weight is also adjusted to meet the control for total number of CUs and total number of CU who own their living quarters. The weighting procedure uses an iterative process to ensure that the sample estimates will meet all the population controls.

NOTE: The weight for a consumer unit (CU) can be different for each week in which the CU participates in the survey as the CU may represent a different number of CUs with similar characteristics.

## D. STATE IDENTIFIER

Since the CE is not designed to produce state-level estimates, summing the consumer unit weights by state will not yield state population totals. A CU's basic weight reflects its probability of selection among a group of primary sampling units of similar characteristics. For example, sample units in an urban nonmetropolitan area in California may represent similar areas in Wyoming and Nevada. Among other adjustments, CUs are post-stratified nationally by sex-age-race. For example, the weights of consumer units containing a black male, age 16-24 in Alabama, Colorado, or New York, are all adjusted equivalently. Therefore, weighted population state totals will not match population totals calculated from other surveys that are designed to represent state data.

To summarize, the CE sample was not designed to produce precise estimates for individual states. Although state-level estimates that are unbiased in a repeated sampling sense can be calculated for various statistical measures, such as means and aggregates, their estimates will generally be subject to large variances. Additionally, a particular state-population estimate from the CE sample may be far from the true state-population estimate.

## XI. INTERPRETING THE DATA

Several factors should be considered when interpreting the expenditure data. The average expenditure for an item may be considerably lower than the expenditure by those CUs that purchased the item. The less frequently an item is purchased, the greater the difference between the average for all consumer units and the average of those purchasing. (See Section V.B. for ESTIMATION OF TOTAL AND MEAN EXPENDITURES). Also, an individual CU may spend more or less than the average, depending on its particular characteristics. Factors such as income, age of family members, geographic location, taste and personal preference also influence expenditures. Furthermore, even within groups with similar characteristics, the distribution of expenditures varies substantially.

Expenditures reported are the direct out-of-pocket expenditures. Indirect expenditures, which may be significant, may be reflected elsewhere. For example, rental contracts often include utilities. Renters with such contracts would record no direct expense for utilities, and therefore, appear to have no utility expenses. Employers or insurance companies frequently pay other costs. CUs with members whose employers pay for all or part of their health insurance or life insurance would have lower direct expenses for these items than those who pay the entire amount themselves. These points should be considered when relating reported averages to individual circumstances.

## XII. APPENDIX 1--GLOSSARY

## Population

The civilian noninstitutional population of the United States as well as that portion of the institutional population living in the following group quarters: Boarding houses, housing facilities for students and workers, staff units in hospitals and homes for the aged, infirm, or needy, permanent living quarters in hotels and motels, and mobile home parks. Urban population is defined as all persons living in a Metropolitan Statistical Area (MSA) and in urbanized areas and urban places of 2,500 or more persons outside of MSA's. Urban, defined in this survey, includes the rural populations within an MSA. The general concept of an MSA is one of a large population nucleus together with adjacent communities which have a high degree of economic and social integration with that nucleus. Rural population is defined as all persons living outside of an MSA and within an area with less than 2,500 persons.

## Consumer unit (CU)

A consumer unit comprises either: (1) all members of a particular household who are related by blood, marriage, adoption, or other legal arrangements; (2) a person living alone or sharing a household with others or living as a roomer in a private home or lodging house or in permanent living quarters in a hotel or motel, but who is financially independent; or (3) two or more persons living together who use their income to make joint expenditures. Financial independence is determined by the three major expense categories: housing, food, and other living expenses. To be considered financially independent, at least two of the three major expense categories have to be provided entirely or in part by the respondent.

## Reference person

The first member mentioned by the respondent when asked to "Start with the name of the person or one of the persons who owns or rents the home." It is with respect to this person that the relationship of other CU members is determined.

## Income before taxes

The combined income earned by all CU members 14 years old or over during the 12 months preceding the interview. The components of income are: Wage and salary income, business income, farm income, Social Security income, Supplemental Security income, unemployment compensation,
worker's compensation, public assistance, welfare, interest, dividends, pension income, income from roomers or boarders, other rental income, income from regular contributions, other income, and Food Stamps.

## Income after taxes

Income before taxes minus personal taxes which includes Federal income taxes, state and local income taxes, and other taxes.

## Complete income reporters

Prior to the introduction of income imputation in 2004, the distinction between complete and incomplete income reporters was based in general on whether the respondent provides values for major sources of income, such as wages and salaries, self-employment income, and social security income. Even complete income reporters may not have provided a full accounting of all income from all sources. CUs that reported across-the-board zero income were categorized as incomplete reporters.

## Geographic regions

Data are presented for four major regions - Northeast, Midwest, South, and West. CUs are classified by region according to the address at which the CU was residing during the time of their participation in the survey. The regions comprise the following States:

Northeast - Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest - Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South - Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West - Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

## XIII. APPENDIX 2 -- UNIVERSAL CLASSIFICATION CODE (UCC) TITLES

*L denotes UCCs that could have negative values.
An underlined UCC represents either a new UCC or a deleted UCC. Please note that new UCCs may not be represented in all quarters. The quarter in which the addition (deletion) occurs is denoted by a leading superscript directly prior to the UCC code. For example, ${ }^{\text {(D) } 061}(\mathrm{UCC})$ identifies a new (deleted) UCC beginning in Q061.

## A. EXPENDITURE UCC's ON EXPN FILE

| 001000 | Stocks, bonds, mutual funds |

|  | 900100 | Unemployment compensation |
|  | 900110 | Worker's compensation and veterans payments including education benefits |
|  | 900120 | Public assistance or welfare including money received from job training grants such as job corps |
|  | 900131 | Child support payments received |
|  | 900132 | Other regular contributions received including alimony |
|  | 900140 | Other income including money received from care of foster children, cash scholarships and fellowships or stipends not based on working |
|  | 900150 | Food stamps |
|  | 910000 | Lump sum payments from estates, trusts, royalties, alimony, child support, prizes or games of chance, or from persons outside of the CU |
|  | 910010 | Money from sale of household furnishings, equipment, clothing, jewelry, pets or other belongings, excluding the sale of vehicles or property |
|  | 910020 | Overpayment on social security |
|  | 910030 | Refund from insurance policies |
|  | 910040 | Refunds from property taxes |
|  | 910041 | Lump sum child support payments received |

|  | ${ }^{\text {D }}$ (061) 950000 | Federal income tax |
| :---: | :---: | :---: |
|  | ${ }^{\text {(061) }} 950002$ | Federal income tax (deducted) |
|  | ${ }^{N(061)} 950003$ | Additional federal income tax (paid) |
| *L | 950001 | Federal income tax refunds |
|  | ${ }^{\text {D }}$ (061) 950010 | State and local income tax |
|  | ${ }^{\mathrm{N}(061)} 950012$ | State/local income tax (deducted) |
|  | ${ }^{N(061)} 950013$ | Additional state/local income tax (paid) |
| *L | 950011 | State and local income tax refunds |
|  | 950021 | Other taxes |
|  | 950022 | Personal property taxes |
| *L | 950023 | Other tax refunds |
| *L | 980000 | Income before taxes |
|  | 980010 | Family size |
|  | 980020 | Age of reference person |
|  | 980030 | Number of earners |
|  | 980040 | Number of vehicles |
|  | 980050 | Number of persons under 18 |
|  | 980060 | Number of persons 65 and over |
| *L | 980070 | Income after taxes |

The following UCCs contain values of 100 depending on whether the CU satisfies the condition. For example, if the CU owns the home, then UCC 980090, homeowner, will have a value of 100. These UCCs are used at BLS to compute percentages for the published tables.

| 980090 | Percent homeowner |
| :--- | :--- |
| 980210 | Percent male reference person |
| 980220 | Percent female reference person |
| 980230 | Percent homeowner with mortgage |
| 980240 | Percent homeowner without mortgage |
| 980250 | Percent homeowner with mortgage not reported |
| 980260 | Percent renter |
| 980270 | Percent black reference person |
| 980280 | Percent non-black reference person |
| 980290 | Percent reference person with elementary education |
| 980300 | Percent reference person with high school education |
| 980310 | Percent reference person with college education |
| 980320 | Percent reference person with no education and other |
| 980330 | Percent vehicle owner |

## XIV. APPENDIX 3 - UCC AGGREGATION

The Dstub file in the Programs folder on the CD shows the UCC aggregation used in the sample program.

## XV. APPENDIX 4 - FMLY AND MEMB VARIABLES ORDERED BY START POSITION

This appendix lists FMLY and MEMB variables in the order that they appear on the files. Sections III.E.1. CONSUMER UNIT (CU) CHARACTERISTICS AND INCOME FILE (FMLY) and III.E.2. MEMBER

CHARACTERISTICS AND INCOME (MEMB) FILE contain detailed descriptions of these variables arranged on a functional basis.

## A. FMLY FILE

## CONSUMER EXPENDITURE SURVEY DATA ON THE INTERNET

Commonly-requested CE data tables can be found on-line at http://www.bls.gov/cex/. The following One and Two-year Tables of integrated Diary and Interview data are available under the Tables Created by BLS heading:

## One Year Tables

Standard Tables from 1984-2006
Expenditure Shares Tables from 1998-2006
Aggregate Expenditure Shares Tables from 1998-2006

## Two Year Tables

Cross-Tabulated Tables from 1986-2006
Metropolitan Statistical Area Tables from 1986-2006
Region Tables from 1998-2006
High Income Tables from 1998-2006
Multi-Year Tables for 1984-1992 and 1993-2006

## CD-ROMS

CE microdata on CD-Rom are available from the Bureau of Labor Statistics for 1972-73, 1980-81, 1990-91, 1992-93, and for each individual year from 1994-2006. The 1980-81 through 2006 releases contain Interview and Diary data, while the 1972-73 CD includes Interview data only. The 1980-81, and the 1990 files (of the 1990-91 CD) include selected EXPN data, while the 1991 files (from the 1990-91 CD) and the 1992-93 CD do not. In addition to the Interview and Diary data, the CDs from 1994-2006 include the complete collection of EXPN files. A 1984-94 "multi-year" CD that presents Interview FMLY file data is also available. In addition to the microdata, the CD's also contain the same integrated Diary and Interview tabulated data (1984present) that are found on the Consumer Expenditure Survey web site ( http://www.bls.gov/cex ).

## XVII. INQUIRIES, SUGGESTIONS, AND COMMENTS

If you have any questions, suggestions, or comments about the survey, the microdata, or its documentation please call (202) 691-6900 or email cexinfo@bls.gov .

Written suggestions and comments should be forwarded to:
Division of Consumer Expenditure Surveys
Branch of Information and Analysis
Bureau of Labor Statistics, Room 3985
2 Massachusetts Ave. N.E.
Washington, DC. 20212-0001
The Bureau of Labor Statistics will use these responses in planning future releases of the microdata files.
