### 2018 Fact Sheet

The 2018 Bolivia GSHS was a school-based survey of students in 2nd Secondary - 6th Secondary, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in 2nd Secondary - 6th Secondary in Bolivia. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Bolivia GSHS measured alcohol use; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; and violence and unintentional injury. Students self-reported their responses to each question on a computer scannable answer sheet.

The school response rate was 94%, the student response rate was 84%, and the overall response rate was 79%. A total of 7,931 students participated in the Bolivia GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
