

# Global School-based Student Health Survey

## Paraguay 2017 Fact Sheet

The 2017 Paraguay GSHS was a school-based survey of students in grades Ocatvo-Tercer Curso, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in grades Ocatvo-Tercer Curso in Paraguay. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Paraguay GSHS measured alcohol use; dietary behaviors; hygiene; mental health; physical activity; protective factors; sexual behaviors; and violence and unintentional injury. Students self-reported their responses to each question on a computer scanable answer sheet.

The school response rate was 100%, the student response rate was 87%, and the overall response rate was 87%. A total of 3,149 students participated in the Paraguay GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.

	Students Aged 13-15 Years			Students Aged 16-17 Years			Students Aged 13-17 Years
