KwaZulu-Natal Income Dynamics Study - 2004

Good (morning/afternoon/evening), I'm _____ and we are conducting a survey for the University of KwaZulu-Natal in Durban. The survey is part of a research project designed to understand people's living conditions and the impact of government policies on their lives. In 1993 and 1998 we interviewed you or another member of your family. The information given to us in these earlier studies has been used to inform government about how the economy works for people like you. As a follow-up to this earlier work, we would like to again ask questions about you and your family.

The survey will take about three hours to conduct. You will be asked questions about your daily life and work, and that of your family members. We would like to arrange two times when it is convenient for you to answer our questions.

We will want to speak to some other members of the household and to ask your primary-school age children a few questions about reading, writing and sums. We would also like to weigh and measure the height of the children in the household. By agreeing to participate in this study, you are giving us permission to weigh and measure the height of these children.

The study will pose no risks to you or to your child. You may refuse to answer any question without penalty. You may also choose to discontinue your participation in this study at any time.

You will not personally benefit from this study. We will however do our best to make sure that South Africa benefits from this study and what we can learn about how to make the economy and government work better for more people.

All information that you give to us will be kept confidential. You and your household members will not be identified by name or address in any of the reports we plan to write
